The Thorn Plumbing Company, Toronto, share capital $20,000. purpose to deal in plumbing supplies, furnaces, gas and hot water fixtures, etc. Directors are John Henry Thorn, Arthur Joseph LaFay, Frederick William Jenkins, Arthur James Jackson and Frederick George Garbutt, all of Toronto.

The Silver Hill Mining Co., Mattawa, share capital $50,000. purpose to carry on in all their branches the operation of a mining, milling, reduction and development company. Directors are John McLellan Deacon, Louis Henry Timmins, Octave Napoleon Gaurreau, Henry Morel and Edward Rowan Legg, all of Mattawa.

The Standard Ideal Company, Port Hope, share capital $500,000, purpose to manufacture and trade in enamelled ware, sanitary water, steam and other pipes, plumbers' supplies, etc. The di-

rectors are Hiram Thomas Bush, Albert Edward Pipher, Pauline Lee Bush and Alice Margaret Pipher, all of Port Hope.

The Imperial Silver Mining Company of New Liskeard, share capital $250,000, purpose to carry on in all its branches the operations of a mining, milling, reduction and development company. The directors are Murdoch McLeod, James McGie Young, William Earl Kerr, Richard George Zahalan and Albert Norton Morgan, all of New Liskeard.

The Niagara Engine Works, Niagara-on-the-Lake, share capital $50,000, purpose to manufacture and sell gas and gasoline engines and other classes of engines and machinery. The directors are Egerton Ryerson Lundy, Haggai Gustavus Adolphus Cook, Francis Gustavus Kick, Hamilton Merritt Robinson, and James Albert Keyes, all of Niagara Falls, Ont.

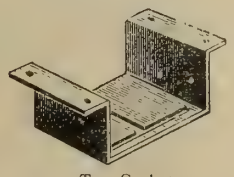
The Haldimand Natural Gas Company, share capital $40,000, purpose to supply natural gas for light, heat and power and to construct, maintain, complete and operate works for the production, sale and distribution of natural gas for light, heat and power. The directors are Richard Anson Harrison, Francis James Ramsey and Francis Ramsey Lalor, all of Dunnville.

The Majestic Oil Company, Toronto, share capital $100,000, purpose to carry on in all their branches the operation of a mining, milling, reduction and development company, including the exploring for, boring for, refining, piping, etc., petroleum oil and natural gas. The directors are John Thomas Mullany, George Lyman Lovejoy, Thomas Henry Graham, all of Buffalo, N.Y.

Ruethel Mining Company, Windsor, share capital $250,000, purpose to carry on in all their branches the operation of a mining, milling, reduction and development company. The directors are William Augustus Thorpe, Henry Clay Rees, William Wilmon Newcombe, Charles Mallory Hovey, Archibald McPhail, John William Wolst Baker, and George Joslin Munsell, all of Detroit, Mich.

The Triple Link Mining and Developing Co., New Liskeard, share capital $40,000, purpose to carry on in all their branches the operations of a mining, milling, reduction and development company. The directors are Everard Brown, William Cotier Cragg, George Hansman, Edward Charles Symon, John Albert Badger, Joseph Irwin Dixon and Fred Wellington Ferguson, all of New Liskeard.

The Automobile Import Co., Montreal, share capital $20,000, purpose to manufacture, buy, lease and deal in all kinds of vehicles, pleasure boats, whether propelled by electricity, steam, naptha, gasoline or otherwise. Incorporators are Arthur Ellegood Hayes Crawford, Frederick Rubidge Crombie, Waldo Whittier Skinner, Ronald Cameron Grant and George Gordon Hyde, all of Montreal.



Municipal Trenching Co., Montreal, share capital $1,000,000, to undertake the work of excavating, trenching and dredging, removing rock and other material, and to manufacture, operate and sell all kinds of machinery connected therewith. The incorporators are Frederick Carleton Austin, Chicago, Ill.; Joseph William Harris, Harold A. Richardson, Frederick Henry Markey and Ronald Cameron Grant, all of Montreal.

Pedlar's Steel Solid Partition Stud

Top Socket

Bottom Socket

FIRE PROOF PARTITION STUD

Lumber having gone up in price Builders are now turning to Fireproof Partitions. We have lately introduced a

FIRE PROOF PARTITION STUD

made from a very heavy grade of sheet steel. Used in conjunction with **Perfect Metal Lath** nothing can better commend itself to builders. Judging by the enquiries we have received our **Fire Proof Partition Stud** will be as eagerly sought as **Perfect Metal Lath** has been. We are also making a **Sheet Steel Furring Strip** and everything in the line of **Roofing, Siding, Ceiling, Covering,** etc., etc. No matter what you want, just write us. Our numerous branches can deliver the goods. Let us have your order—**now**.

PRESENTATION TO MR. ROGERS.

MR. E. R. ROGERS, Toronto Junction, who recently retired from active business to accept the responsible position as Inspector of Prisons and Asylums under the Ontario Government, was tendered an address and presented with a suit case by the members of the Toronto Retail Hardware Association on Monday evening, October 23rd. Mr. Rogers was president of the association and the esteem in which he is held is well evidenced by the action of his fellow members. The address read as follows :

"Dear Sir :—We, the officers and members of the Retail Hardware Merchants' Association, on learning of your retirement from our line of trade, could not let the opportunity go by without showing some appreciation of your services as president of the said association. During the years you were president we learned your value as ia citizen and as an officer of the association. Although your duties at times were very arduous, you accepted the situation in a manner which only a man of your ability can accept. On the evenings when we assembled together the president was always in his place when no doubt his business and home demanded his services, but these he overlooked for the time for the welfare of our trade.

"The association takes this opportunity of congratulating Mr. Rogers on his appointment by the Ontario Government to such an important position as they have seen fit to appoint him to. We know in him they have a man who will give a good account of his stewardship. On behalf of the members of the association we present this suit case to you as a slight token, for the very valued services you have given us, and we wish you and yours every prosperity.

"Signed,
"JOHN CASLOR,
"J. E. HALL,
"S. J. GREER."

BIG STEEL RAIL ORDER.

Two thousand five hundred tons of steel rails have been ordered by the York Radial Railway Company from the Algoma Steel Works at Sault Ste. Marie. The rails are for the Metropolitan Railway extension from Newmarket to Sutton on Lake Simcoe, a distance of 24 miles. The road has been graded and now awaits the laying of the tracks. The York Radial will purchase another two thousand tons of steel rails for the Mimico extension.

BUILDING AND CONSTRUCTION

BUILDING IN TORONTO.

TORONTO has begun the last quarter of the year with a record for building permits which is already ahead of the value of the permits during the whole of 1904. Since the first of this year plans for buildings which represent a value of $7,945,787 have been approved by the department. This is an increase of $3,382,296 over the corresponding period of last year, when in the nine months the value of the permits reached $4,563,188.

That the building industry is not yet on the decline is shown by the fact that during last month plans for no less than 261 buildings were approved, whereas in September of last year there were but 186 permits. The values of the permits were $877,005 in September, 1905, and $546,275 in September, 1904. Somewhere in the neighborhood of 2,100 permits were issued this year, and 2,424 buildings were actually erected, some of the permits being for half a dozen houses. Last year there were 1,445 permits issued to September 30 and 1,248 new buildings erected.

HEIGHT OF BUILDINGS.

The height of buildings in Budapest is fixed by ordinance according to the width of the streets. Where the latter are not more than 33 feet wide the buildings must not exceed three stories above the ground floor, or a total of about 65 feet. Where the streets are 49 feet or more wide four stories above the ground are allowed, or a total height of 82 feet. Any public building or specially designed private structure may be run up a few feet above these limits by securing permission from the city authorities.

BUILDING NOTES.

A new theatre, to cost $200,000, is to be built at Winnipeg.

The Roman Catholics are to erect a $50,000 church at Arnprior.

A new fire station is to be erected in Montreal, at a cost of $100,000.

The Home Bank are to erect a branch bank in Toronto, to cost $12,500.

The Vancouver Athletic Club have let a contract for a new $12,000 club building.

A new school house is to be erected at East Kildonan, Man., to cost $1,600.

Contractor Mawhinney of Hartney is erecting a convent at Grande Clairiere, Man.

Building permits issued so far this year in Winnipeg amount to about $10,500,000.

New buildings to the amount of $20,000 have been erected at Oak Lake, Man., this year.

George Morring, Port Arthur, is having plans prepared for a $12,000 brick and stone block.

A new school building is to be erected at Kenora, Saskatchewan; tenders are being called for.

The Elk Lumber & Mfg. Co. are to rebuild their sawmill, recently destroyed by fire at Fernie.

The Dominion Government are to erect a branch postal station in Toronto, to cost $90,000.

J. T. Abrey, proprietor of the Cosmopolitan Hotel, Vancouver, has plans prepared to erect a large hotel.

Thomas McCormick, London, is to erect a seven storey cottage in connection with the Muskoka Cottage Sanatorium, the cost to be $6,000.

E. Cote, contractor, Quebec, is constructing a store building to cost $5,000. Two buildings under construction in the same city are being erected by M. Cauchan, to cost $3,000, and P. Dion, to cost $2,000.

Minneapolis capitalists have bought a billion feet of timber and have built an immense sawmill in Vancouver. The output of the mills will probably be between forty million and seventy million feet of timber per annum.

Amongst the building uermits recently issued in Hamilton are the following: Twentieth Century Club, club house, $7,000; A. W. Peene, two dwellings, $3,600; J. Stewart, residence, $2,500; Samuel Landers, residence, $3,000; W. H. Fogwell, dwelling, $2,000; Stewart & Witton, stable, $3,000; J. Hammell, dwelling, $1,600; Thos. Allen, three houses, $6,000; Armstrong Bros., stable, $1,500; Thos. Robson, residence, $3,000.

MONTREAL BUILDING PERMITS.

A. Asselin, 132 Dufresne street, dwellings, $1,500.

A. Menard, 40 Aylevin street, dwelling, $1,500.

Zotique Leveille, 189 Dumont street, dwelling, $1,800.

Alph. Carnere, 3019 St. Hubert street, dwellings, $1,800.

Alex. Belanger, 503 Moreau street, dwellings, $2,000.

C. Courtois, 42 St. Louis street, dwellings, $3,600.

Clement Renaud, 352 Rachel street, dwellings, $1,800.

Jos. Legare, 409 Breboeuf street, dwellings, $1,800.

D. Raymond, 1526 St. Hubert street, dwellings, $2,000.

J. B. Gratton, Sherbrooke street, Lafontaine ward, dwellings, $5,500.

Ovila Regunbale, Marie Anne street, Duvernay ward, dwellings, $2,500.

Ludger Clement, Christophe street, Duvernay ward, dwellings, $9,200.

Patrick Kelly, Ropery street, St. Gabriel ward, dwellings and store, $4,000.

P. Vanier, St. James street, St. Joseph ward, (add. 1129 Dorchester street,) dwelling, $3,000.

Protestant Board of School Commissioners, 595 Sherbrooke street, educational building, $100,000.

HEATING AND PLUMBING

PLAIN TALKS ON PLUMBING, HEATING AND VENTILATION

A Series of Practical Articles Written in Plain Terms, Devoid of Technical Phrases, Algebraical Signs, etc., so as to be Easily Understood by all Interested in these Subjects.

By M. J. Quinn, Mechanical-Superintendent for the Ontario Government.
[Registered in accordance with the Copyright Act]

ARTICLE XIX.

HINTS ON HOUSE PLUMBING.

WE have dealt at some length in preceding articles with break-syphons, showing, first, what they are and what work they accomplish, and, second, how they should be connected to the fixture.

We have said that a break-syphon should always be connected to the stack above the highest fixture in order that no waste matter could be discharged through it, and this, in most instances, is easy of accomplishment, but occasionally some obstacle presents itself and must be overcome.

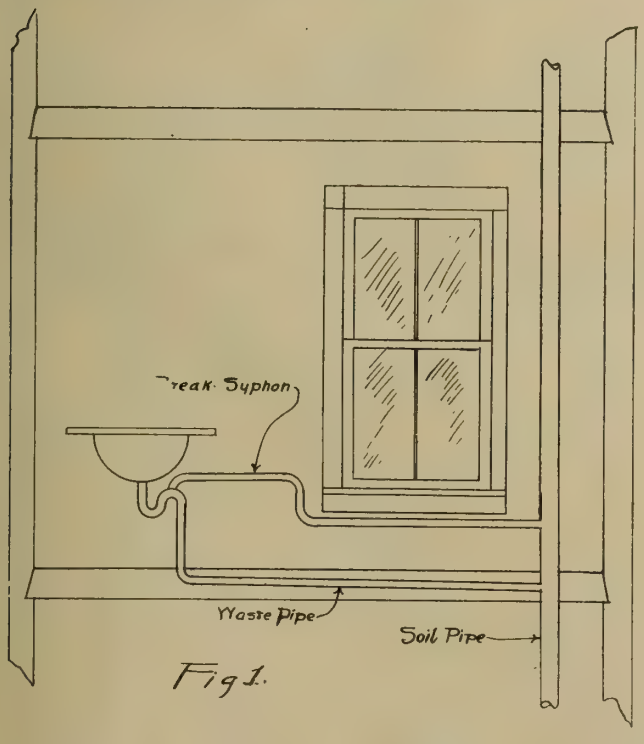

Fig 1.

In Figure 1 we have such an obstacle. It will be noted that in this case the soil pipe stack is situated on the right side of the window, while the wash basin is on the left side. Now, obviously, if the break-syphon is to connect to the stack above the basin, and at the same time be so arranged as to prevent waste matter passing into and fouling it, it must be carried over the top of the window and connect with the stack near the ceiling. Such a course, however, is usually objectionable inasmuch as that, except where the conditions are unusually favorable, it mars the appearance of the whole room.

It will be equally plain that if the pipe were carried below the window as shown, and then up close beside and connected to the stack above the basin level, that that portion of the break-syphon below the window would form a trap which would fill with waste water or condensation, thus defeating the object aimed at.

It will be clear, then, that in such a case as we are dealing with some other plan must be adopted and we show in Figure 2 the correct way in which to connect a break-syphon under such circumstances.

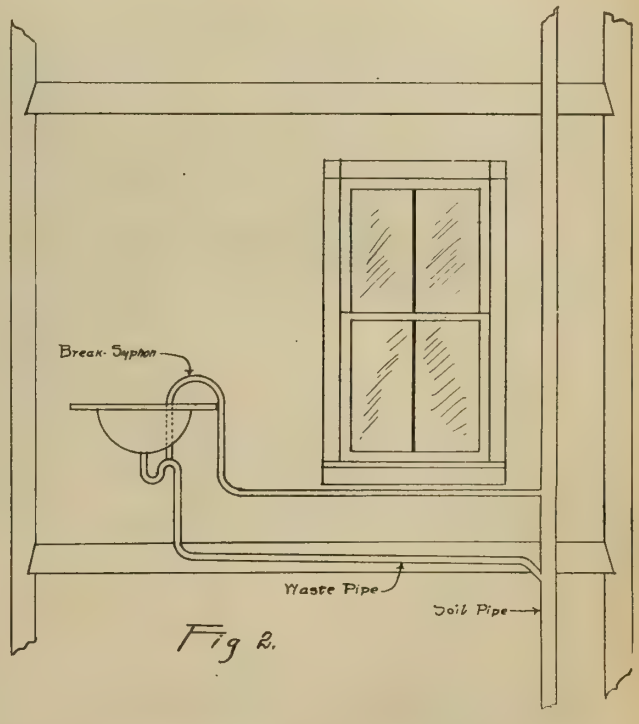

Fig 2.

In this case it will be seen that instead of running directly off the top of the trap toward the stack, that the break-syphon first rises to a point above the basin (though if there is any special reason for having it lower, the top of the bend may be kept down as low as the slab), and then turns down to a point below the window sill and thence to the stack, care being taken that there is a slight continuous fall from the bottom of the "goose-neck" to the stack, in order that any condensation will drain away. With such a connection as the one shown in Figure 2 it will be apparent that no waste water can escape through the break-syphon, and that the latter cannot become fouled, and that such a connection on the upper floor of a building would be just as effective as those shown in our last article on the subject.

In the case of a fixture on the lowest floor in a building requiring a connection such as is here described, it could not be connected directly to the stack as shown, for the reasons given in a previous article, but would have to rise between the stack and the window and connect to the latter above the highest fixture. Where this is necessary the bottom of the vent stack cannot be drained into the top of a trap, after the manner indicated in our last article, without filling up the vent where it passes under the window, an objection already urged against another form of connection in this article, and hence the vent stack, as well as being connected to the soil pipe stack "above the highest fixture," must also be connected to it below the lowest one.

Such a connection is indicated in Figure 3 in which case a reducing "Y" is placed in the stack below the lowest waste connection and, as will be apparent, will provide perfect drainage for all of the vents or breaks connected to it.

Regarding the sizes of pipe required or necessary for break-syphons, many arguments have been advanced, but generally the rule is to have them one size less than that of the trap to which they are connected, up to 2 inches in diameter, as follows: 1¼ and 1½-inch wastes to

have 1¼-inch vents, 2 and 3-inch wastes to have 1½-inch vents and 4-inch wastes to have 2-inch vents. The conditions under which a system is installed, however, will have a large bearing upon the sizes of vents required. For instance, it is easy to understand that a 1¼-inch vent connection twenty-five feet long cannot be nearly as effective as one two feet long, for the reason that while in the short one the air can be moved from end to end in a fraction of a second, it cannot be moved nearly so quickly in the longer one, not only because of the greater amount of air to be moved, but also because of the friction due to greater length of pipe, so that while a comparatively small break-syphon would do where the connection is a close one, it is not safe as a rule to have them too small. It will be found good practice, therefore, to have them of the sizes mentioned.

It is usually possible to entirely hide from view the break-syphons used in connection with a plumbing plant by cutting a "chase" in the wall to receive them, and as this is easily done in most cases, even in an old house, the plumber should go to the small amount of extra trouble involved if for no other reason than to obtain the advertisement furnished by a thoroughly completed job free from objectionable features, and there is perhaps no more unsightly thing than vent pipes crossing the walls and ceiling of a room which is otherwise well finished.

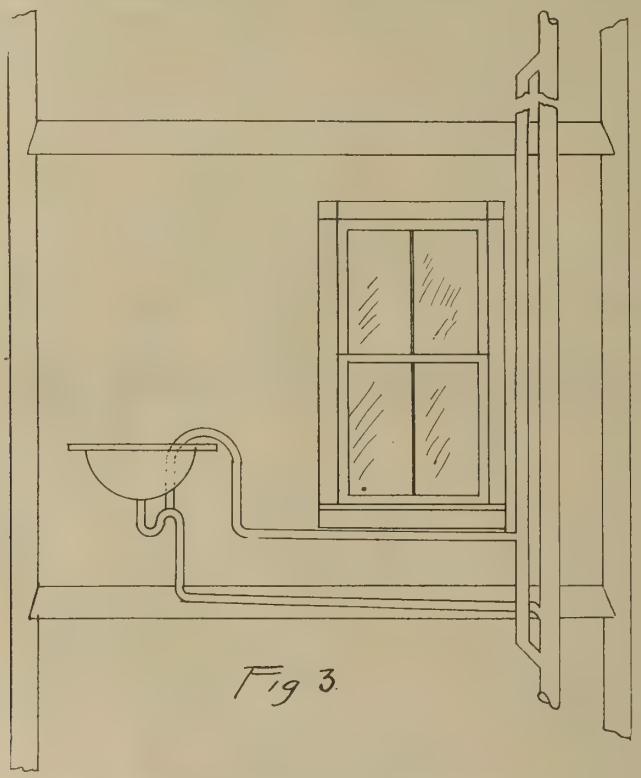

Fig 3.

Where it is absolutely impossible without great inconvenience or expense to put in such a break-syphon as is described in this and preceding articles, then the plumber may use one of the three or four automatic devices on the market which are connected to the top of the trap and secured to a nearby wall and are so arranged as to permit the entrance of air from the room when the slightest suction from within the waste pipe takes place.

While this class of break-syphons are often used they are certainly not as good or as safe as those already described, and for obvious reasons are not recommended.

In this connection it may be mentioned incidentally that the patented break-syphons do not allow of any circulation of air through the waste pipe system, and this often-times may prove a serious matter, inasmuch as the water lying in the traps under favorable conditions will absorb air, and if the trap happens to be at a considerable elevation above the sewer, it is fair to assume that as there is a slightly greater pressure there due to the weight of the atmosphere most of the absorption will take place on the sewer side of the trap, so that a certain amount of the foul gas so absorbed may be transmitted through the water to the air in the house.

It is therefore most desirable that where the waste pipe connecting any fixture is of considerable length a break-syphon that will not only act in the capacity as such, but in addition provide the necessary ventilation, should be used.

PLUMBERS' CASE IN COURT.

THE following master and union plumbers and steamfitters were arraigned before Magistrate Denison recently on the conspiracy charge preferred by John B. Reeves, and were remanded until the 31st: William Bush, Lewis Le Grow, Robert W. Harrison, W. H. Meredith, William J. Mason, William J. Storey, Charles H. Beavis, Charles J. Connor, K. J. Allison, F. Armstrong, F. Lawlor, Patrick Hayes.

Mr. A. F. Lobb appeared for the masters, and Mr. W. T. J. Lee for the union men. Mr. Lee asked for a remand, and it was agreed to have the preliminary hearing on Tuesday next. A jury will try the case.

The declaration sworn out by Mr. Reeves alleges "that they did conspire, agree and arrange to restrain and injure and unreasonably to enhance the price of plumbers' supplies and fittings, and that they unduly tried to prevent and lessen competition in the production, purchase and sale of those fittings and supplies, which is contrary to the peace and to the evil example of all others."

The Crashley case, tried last Spring, and adjourned to the Fall assizes, is also expected to come up on Monday or Tuesday.

AN ENJOYABLE GATHERING.

A REPRESENTATIVE of Hardware and Metal was fortunate in securing an invitation to attend the annual dinner given by the base ball club of the Master Plumbers' Association, in Toronto, last Saturday afternoon. The event was made a joint gathering of the Master Plumbers' Association and members of the local (46) Journeymen Plumbers and Steamfitters. Base ball and foot ball games were participated in during the afternoon, and a social evening was spent after dinner was partaken of. Songs, recitations, speeches and stories were all on the programme, but the most pleasant feature was probably the presentation of gold headed umbrellas to Manager John Wright and Umpire Copping, by the members of the Master Plumbers' Association Base Ball Team. Messrs. Kenneth Allison and John Fullerton made the presentation addresses and extolled the good qualities of Messrs. Wright and Copping, to both of whom were alike due the success of the season's outings. On behalf of the Journeymen's Ball Team Business Agent Storey, of local union 46, also presented the members of the Master Plumbers' Team with silver headed umbrellas, as a souvenir of the victory of the bosses over their employes in the base ball game participated in at the annual picnic of the union as St. Catharines, in August.

During the evening Messrs. Scott, Street and Brown entertained the audience a number of times with excellent songs, while Master Glenn, the son of Ex-President Dan Glenn, of the Journeymen's Union captivated the present by his beautiful singing. Addresses were also delivered by several members of both organizations, Secretary W. H. Meredith, of the Master Plumbers' Association speaking on behalf of that body, and Business Agent Storey representing the union in the reply to the address of Mr. Meredith. Mr. Meredith drew attention to the mutual interest existing between the members of the two organizations. "The master plumbers of to-day were the journeymen of yesterday, and the journeymen of to-day are the bosses of to-morrow," said Mr. Meredith. Mr. Storey referred to the good relations which had existed between the two organizations for several years, and said that although a small cloud darkened the horizon at present it would soon be dissipated. The great value of the present agreement was that both bosses and journeymen were assured that the evils of strikes and trade disturbances would be avoided so long as the two bodies worked together for the good of the trade. Ex-President Dan Glenn, of the journeymen's union, said that as he was not a member of either organization he could speak his mind freely. The two organizations should face the present difficulties bravely and fight

those who were the cause of the trade troubles to the last ditch. The plumbers and steamfitters had no reason to fear the law, but to insure success the two organizations should stand together, as a house divided against itself must surely fall.

ELECTRICAL NOTES.

An electric lighting plant is to be established at Canning, N.S.

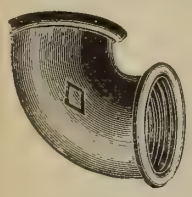
The Cone Gas Machine Co. has erected a large factory at Galt, and will commence business shortly.

The Brantford Electric Co. purpose installing the famous Adams-Bagnall arc lamp throughout the city. This is the same lamp as is used in the city of Montreal, and casts no shadow.

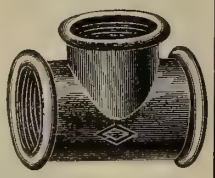
All the large works engaged in electrical industries in Germany have announced to their customers that, owing to increased wages and cost of raw materials, a general advance of 10 per has been made in their products, including motors, machines, apparatus, fittings, etc.

The Dominion Coal Co. have decided to substitute electricity in place of steam in their various Cape Breton mines. This power will be used for hoisting, hauling, and other purposes, and the plant will, it is understood, be a large one. Tenders are already being asked and installation will be gradually proceeded with until electricity is in general use.

The Winnipeg Electric Railway Co. having completed a modern, up-to-date gas plant, is now announcing a substantial reduction in the price of both light and fuel gas, as follows: Lighting gas, $1.50 per 1,000 cubic feet, with a discount of 10 per cent. on payment within ten days from date of bill. Fuel gas, $1.50 per 1,000 cubic feet, with a discount of 20 per cent. This will mean $1.35 net for lighting and $1.20 for fuel gas to the consumer. The old rate for both lighting and fuel gas was $2 per 1,000 cubic feet, with a discount of 15 per cent. for lighting gas and the following monthly discounts for fuel gas: Up to 2,000 feet, 20 per cent.; up to 4,000 feet, 25 per cent.; over 4,000 feet, 30 per cent.



The Hamilton Brass Mfg. Co. are suing A. J. Small, Toronto, for $299.50 for work and goods supplied for use in the Grand Opera House, Toronto.



The Provincial Board of Health is meeting in Toronto this week. Subjects before the board include the establishment of uniform regulations governing health resorts in Ontario and better sewerage systems throughout the Province.

PLUMBING MARKETS

QUEBEC.

Office of HARDWARE AND METAL,
232 McGill Street,
Montreal, October 27, 1905.

THE only feature of interest this week is the advance in iron pipe. As was foreshadowed in our report of last week the old prices have been withdrawn and new discounts issued by the local mills. The jobbers will promptly follow suit. In addition to this advance in price it is said to be very difficult to get iron pipe at all, there being a decided shortage in some sizes.

In fittings there is a very brisk demand which exceeds the supply. Local foundries are exceedingly busy and their sales are so large that they are now behind in their orders.

Lead pipe remains at the same quotation as for some weeks past in spite of continued firmness in the primary markets.

Range Boilers—Conditions remain as before reported. Our prices are: Iron clad, 30 gallon, $6.00, and 40 gallon, $7.50 net; copper, 30 gallon, $22.00; 35 gallon, $24.00; 40 gallon, $28. The discount on copper boilers is 15 per cent.

Lead Pipe—Prices are unchanged, but decidedly stronger than last week, owing to the continued firmness of pig lead. We are quoting: Discounts 25 per cent. and 5 per cent. f.o.b. Montreal, Toronto, St. John, N.B., and Halifax; f.o.b. London, 15c. per hundred lbs. extra; f.o.b. Hamilton, 10c. per hundred lbs. extra.

Iron Pipe—The expected advance has occurred and we are this week revising our discounts. Quotations are: Standard pipe, in lots of 100 feet, regular lengths, 1-4 inch, $5.50; 3-8 inch, $5.50; 1-2 inch, $8.50; 3-4 inch, $11.50; 1 inch, $16.50; 1 1-4 inches, $22.50; 1 1-2 inches, $27.00; 2 inches, $36.00; discounts on black pipe, 1-4 inch, 62 per cent.; 3-8 inch, 62 per cent.; 1-2 inch, 72 per cent.; 3-4 inch, and upwards, 74 per cent. Discounts on galvanized pipe: 1-4 inch, 47 per cent.; 3-8 inch, 47 per cent.; 1-2 inch, 62 per cent.; 3-4 inch and upwards, 64 per cent. Extra heavy pipe of 100 feet lots are quoted as follows: 1-2 inch, $12.00; 3-4 inch, $15.00; 1 inch, $22.00; 1 1-4 inches, $30.00; 1 1-2 inches, $36.00; 2 inches, $50.00. The discount for black pipe is: 72 1-2 per cent., and for galvanized, 61 per cent.

Iron Pipe and Fittings— Some of the local foundries are being taxed to their utmost capacity to fill orders and are said to be weeks behind in their bookings. Our prices are: Discounts on all sizes of nipples up to six inch, 67 1-2 to 70 per cent.

Soil Pipe and Fittings—There has been no change in price but the buoyant tone continues and prospects are for higher quotations. Our quotations are as follows: Standard soil pipe, 50 per cent. off list. Standard fittings, 50 and 10 per cent. off list; medium and extra heavy soil pipe, 60 per cent. off. Fittings, 60 per cent. off.

Solder—Conditions are unchanged, the high prices commanded by tin and lead having no effect upon solder as yet. We are still quoting: Bar solder, half-and-half, guaranteed, 21c.; No. 2, (wiping solder) 17c.

ONTARIO.

Office of HARDWARE AND METAL,
10 Front Street East,
Toronto, October 27, 1905.

NO falling off in business is reported, the demand for all classes of goods continuing very active. The general total of business done is far ahead of a year ago and the activity was expected to decline before this time. The jobbing houses are still working overtime and the only kicks coming are the ones relating to the difficulty of getting goods out in time to please purchasers. The demand for enameled ware has been enormous recently and the Canadian producers have fallen back some in the delivery of goods.

Despite the advance in iron pipe in Montreal, the market in Toronto continues open and disorganized. Conditions, however, appear to be firmer this week and there is a closer adherence to listed figures than a week ago. The open market has not encouraged any abnormal buying as while sales for heating contracts and farmers' windmills are large, steamfitters are not desirous of carrying dead stock over the winter months. Fittings are being sold actively.

Prices continue as reported last week.

Lead Pipe—An advance is certain, but one of the large producers is holding the market down, refusing to make an advance at this time. We quote: Lead 7c; lead waste pipe, 8c.; discount, 25 and 5 per cent.

Soil Pipe and Fittings—Demand is active with producers keeping well up to their orders. We quote: Medium and extra heavy pipe and fittings, 60 per cent.; 7 and 8 inch pipe, 40 and 5 per cent.

Iron Pipe and Fittings—Prices are being held firmer than a week ago. The open market still exists and a slightly larger trade than usual is being done. We quote as follows: Cast iron, elbows, tees, crosses, etc., 65 per cent.; cast iron plugs and bushings, 65 per cent.; flange unions, 65 per cent.; nipples, 75 per cent.; iron cocks, 60 per cent.; Canadian malleable, 35 per cent.; American malleable, 25 per cent.; malleable unions, 65 per cent.; malleable bushings and plugs, 60 per cent.; C. I. ceiling plates, plain or N. P., 70 per cent.; C. I. floor, 80 per cent.; hookplates, 60 per cent.; expansion plates, 65 per cent.; headers or branch tees, 65 per cent.; ring hangers, black or galvanized, 60 per cent., American list.

Copper and Range Boilers—An average business is being done. The discount continues at 15 per cent.

Galvanized Iron Range Boilers—Building is well advanced and many boilers are being installed. Trade continues brisk. Our quotations are as follows: 12 gallon capacity, standard, $4.50; extra heavy, $6.50; 18 gallon, standard, $4.75; extra heavy, 6.75; 24 gallons, standard, $4.75; extra heavy, $6.75; 30 gallon, standard, $5; extra heavy, $7.50; 35 gallon, standard, $6; extra heavy, $9.50; 52 gallon, $11; extra heavy, $14; 66 gallon, standard, $18; extra heavy, $20; 82 gallon, standard, $21; extra heavy, $24; 100 gallon, standard, $29; extra heavy, $34; 120 gallon, standard, $34; extra heavy, $40; 144 gallon, standard, $47; extra heavy, $55.

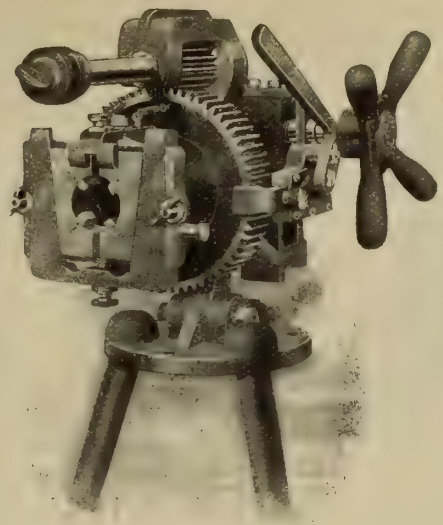
Iron Pipe—While an advance is reported in Montreal an open market still continues in Toronto. Less cutting is reported, however, and business being done is but little over the average. Discounts of from three to five per cent. have been given off list figures, and a very large trade has been done at the lower prices. We quote as follows: Black, 1-4 inch, $2.04; 3-8 inch, $2.06; 1-2 inch, $2.30; 3-4 inch, $2.88; 1 inch, $4.13; 1 1-4 inch, $5.63; 1 1-2 inch, $6.75; 2 inch, $9.00; 2 1-2 inch, $15.75; 3 inch, $30.50; galvanized 1-4 inch $2.86; 3-8 inch, $2.89; 1-2 inch, $3.15; 3-4 inch, $4.03; 1 inch, $5.78; 1 1-4 inch, $7.88; 1 1-2 inch, $9.45; 2 inch, $12.60; 2 1-2 inch, $23; 3 inch, $30.

Solder—Lead and tin are very strong and the prices we quote are very strong. We quote: Bar solder, half-and-half, guaranteed, 19 1-2c.; refined, 18 1-4c., and wiping at 17 1-2c.

Enameled Ware — An enormous demand for Canadian ware is reported, so much in fact that the producers are fully a fortnight behind in their shipments. Our quotations are as follows: Baths, rolled rim, 5 feet, 2 1-2 inch rim, first quality, $17.50; special, $15.50; 3 inch rim, first quality, $18; special, $17; 5 1-2 feet, 2 1-2 inch rim, first quality, $19; special, $17; 3 inch rim, first quality, $20.50; special, $18.50. Lavatories, discounts 30 to 40 and 5 per cent. Sinks, 18 x 30 inch, flat rim, first quality, $2.45; special, $2.00.

ICELESS COLD STORAGE.

When ice storage is not feasible an unrefrigerated house, built on the same lines but with only one room, answers the purpose nearly as well. If this house is built into a side hill it is easier to regulate the temperature. One or more air spaces in the walls are essential. The temperature of this house is controlled entirely by ventilation. In Summer and Fall the windows or venti-



RAMSAY'S ALUMINUM PAINT

MERRELL COMBINED HAND AND POWER MACHINES

These machines are our portable hand machines, mounted on base and driven by compound gears with cone pulley, and are so arranged that either hand or power can be used at will, or the machine can be readily taken from its base and used as a portable hand machine. The chasers are set by graduation to any size desired, are released while the machine is in motion, opened to permit of pipe being cut off, and closed instantly and positively, one set being used to thread several sizes of pipe. They can be sharpened by grinding and are readily replaced by chasers cutting any style or pitch of thread, either right or left. Four sizes—Nos. 5½, 6½, 9½, 11½.

lating flue are opened during the night, when the air is coolest, and are closed very early in the morning. In Northern States a temperature of about 50 degrees may be maintained at this season in this way. The cold air may enter through windows, wooden flues or tile flues, the latter two being placed near the floor and extending through the wall and several feet outside. The house should, of course, be frost-proof. —The Garden Magazine for October.

TESTING HOT WATER APPARATUS.

WHAT plan should be adopted when testing a domestic hot water supply apparatus, with the view of passing it for payment, to ensure its being correct in detail and efficiency? One brief but quite good answer to this question is to be found in the direction to ascertain whether it will give a hot bath of 30 gallons at 100 deg. before breakfast. It is certain that if the pre-breakfast warm bath can be had it is exceedingly unlikely that the apparatus will fail at any other time. Such a test implies that 30 gallons of water must be raised some 35 deg. to 40 deg. in forty minutes, and a boiler and its tank and pipes that will work together to effect this will certainly meet the general requirements later in the day. Indeed, it is probable that the apparatus will more than meet the demand unless the damper is carefully regulated. The early morning bath may therefore be considered as an index to efficiency in practically every case. Of course, if it were a large house with two bath rooms the apparatus would be proportionately large, and would give two baths of water—i.e., 60 gallons—in the time named. The critical detail of a test, however, usually lies in the fact that it does not take place when the house is occupied and the boiler in regular use. If it is a new house a very liberal allowance must be made as to time, and even if it is only a new boiler some margin is still necessary, because when first lighting up the boiler-setting is green and cold, the water is cold, and all the places and parts occupied or in contact with the pipes, etc., are cold also. When an apparatus is in regular use the water, when the cook lights the fire, may be 65 deg. or 70 deg., the brickwork is dry and slightly warm from overnight, the draught is good, and every part conduces to good results. Therefore, in testing a new apparatus, it is not at all unreasonable to allow double time—say, one and a quarter or one and a half hours—for a bath of water, say 30 gallons, at from 96 deg. to 100 deg., and there ought not to be any attempt to economize fuel during this time, as a servant is allowed to have an open damper the first forty-five minutes in the morning if a bath is required. As to the mechanical details of a job, if these make for the general efficiency of the whole, there cannot be anything very far wrong. Such points as the quality of the cylinder and tank, the weight of the pipes, and the workmanship need watching, but in passing work of this kind experienced eyes quickly detect details in these matters which are not quite right, and nothing short of experience and wide knowledge of the work can insure proficiency in this respect.—The Ironmonger.

SANITATION ABROAD.

NOT many years ago the majority of the people abroad were obliged to visit a bathing establishment when desirous of taking a bath. The luxury of a bathroom at home was only to be enjoyed by those living in high-priced houses or apartments, and even then the methods and fixtures in use were often anything but sanitary. People living in small places were put to the greatest inconvenience, and where no public bathing establishment was to be found, they were obliged to perform their ablutions in the now obsolete wooden tub.

Often a bath tub was destined to occupy a corner in a dark room, otherwise useless for dwelling purposes. In the last decade, however, conditions have improved and the use of modern sanitary appliances, owing to the construction of waterworks and the laying of sewerage in places before unknown, has greatly increased. Unsanitary fixtures of all kinds are doomed to disappear; modern devices are taking the field, bringing with them health and happiness. Fixtures familiar to us at home are now to be found in general use in all civilized countries.

American goods are more and more in demand, even in countries such as Great Britain, Germany and France, where the home production is by no means unimportant. In fact it can be safely said that American ideas and appliances are in the lead, and that there is a promising future for the sale of high-grade sanitary goods of American origin abroad.

PLUMBING GOSSIP.

Tenders are being advertised for the installation of a plumbing and heating system in the town hall, Perth, Ont.

* * *

An anooymous correspondent from Ottawa informs Hardware and Metal that the Master Plumbers' Association has decided to dissolve, the action being the direct outcome of repeated attempts to introduce features of protection. The report has not yet been verified, however, and if it turns out to be true, it is only a question of time before another organization will spring into existence, as the trade in Ottawa, as in other large cities in Canada, have learned the lesson that it is better to do business on an organized and systematic basis rather than in a cut-throat fashion.

* * *

This issue of Hardware and Metal is printed before the Provincial conference of the Master Plumbers' Association in Ontario has completed its labors. A full report will be given next week, our monthly plumbing number. At the present time there is every indication that the gathering will be the largest in the history of the association, as far as the semi-annual conventions are concerned. Since the annual gathering on Good Friday a new association has been organized at Niagara with seven members, and delegates representing this association, as well as from Napanee, Port Arthur, and other towns which have never sent representatives to the convention, will be in attendance.

Clauss Brand

Fully Guaranteed

Paper Hangers' Shears

Hand forged from finest steel and welded on our composition metal, hardened in water and tempered by natural gas. This shear is made purposely for paper hangers' use, and is more durable than other of its kind on the market. We call special attention to this Shear. Japan handles and finely finished blades. Ask for discounts.

NEWMAN'S PATENT INVINCIBLE FLOOR SPRINGS

Combine all the qualities desirable in a Door Closer. They work silently and effectually, and never get out of order. In use in many of the public buildings throughout Great Britain and the Colonies.

MADE SOLELY BY
W. NEWMAN & SONS, Birmingham.

A WORD TO PLUMBERS

Our Pipe Die reduces the labor in threading pipes at least one half. Try it, it will cost you nothing to try it. We secure you against possible loss by our offer to return your money on return of the die within thirty days, if it is not satisfactory. It is surely worth a trial on these conditions.

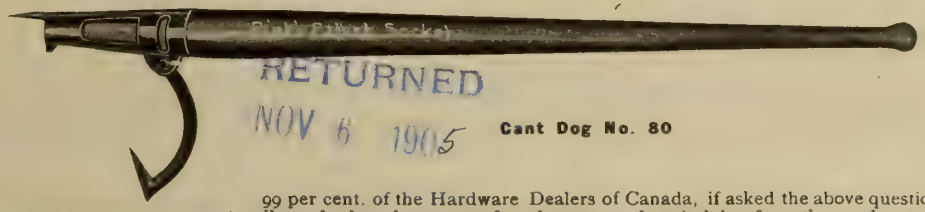
Why are YOU in business



For Pleasure, or Money

Grab Hook No. 2
For ⅜ and ½-inch chain

Slip Hook No. 1
For ⅜ and ½-inch chain

Cant Dog No. 80

99 per cent. of the Hardware Dealers of Canada, if asked the above question, would naturally reply that they were after the money, but, judging from the stock some of them keep, you would find it hard to believe them.

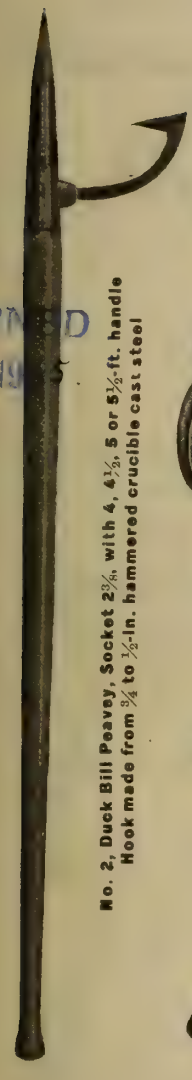
In many stores the stock has lain on the shelves for months. Why? Because it is not first-class, and there is no demand for it. If the goods were up-to-date and saleable, they wouldn't have the chance to lie there and collect dust, but would be continually moving.

Even though you are the only Hardware Merchant in your town, don't think for a minute that people will buy your old-time stock, when "Modern Mail Order Methods" make it about as easy to send to the nearest city for what they want, as to drive down to your store.

The only possible way to hold your trade, as well as increase it, is by stocking high-class, up-to-date goods; you might as well start now by looking over the little assortment of lumbering tools we have illustrated for you.

You are bound to wake up sooner or later to the fact that the other fellow is getting the business, and every day you go along in the old rut only makes it harder for you in the end.

Get the reputation for "Good Goods" and you will find pleasure as well as money in your business.



"Pink's Goods" are "Good Goods." They have stood the test for thirty-seven years.

No. 80 represents a new "Cant Dog." The very latest out. Note the socket. It is light and durable. It also has a spur at the bottom of the socket, which is just what is wanted for loading and guiding logs when they are going up the skids. If your handle should break, you will find it easier to fit to a new one, than any other made.

We can fill your mail order for these Cant Dogs, or anything else in the Lumbering Line, same day as received.

Remember to say "Pink's" when ordering.

CHURCH'S COLD WATER

ALABASTINE

The Old Reliable

It will not be a criticism on the good judgment of any dealer if **ALABASTINE** is stocked this Fall. Experience of the past warrants the statement that **IT IS JUST THE THING TO DO.** And why? Because his stock of tints at this season of the year is naturally broken, and if not complete ***sales will be lost.*** Then again, if put off until spring when the rush is on, there will likely be delay in getting goods, and consequently loss of business.

ORDER DIRECT OR FROM NEAREST JOBBER. SPRING DATING.

The "C" Brand

On a box of Horse Shoe Nails with our name, means to the purchaser that he shall receive the best, and "**made in Canada.**"

Forty years is a long period in manufacturing experience in the production of Horse Nails. You get the benefit of it all, when you buy the "**C**" brand.

The best material known or used by any maker in the world for making Horse Nails, is Swedish charcoal steel nail rods. We use this exclusively.

The "**C**" brand nails will stand more hard work and outlast any "cold process" nail made in the world—bar none.

Don't compare prices, compare quality. The best costs the most to produce, and always sells for the best price.

No "Friday bargains" on the "**C**" brand. One quality—and one price for all.

Remember, that the recollection of the quality will remain long after the price has been forgotten.

Your orders and preference for the "**C**" brand respectfully solicited.

SALES LESSON IV.

Enquirer is now quite interested. Begin to clinch the sale. Tell him there are more "Dillon" virtues yet. The **Dillon Hinge-Stay Fence** has no locks or other contrivances to cause trouble in frosty or excessively hot weather (Point No. 3). The "Dillon" is made scientifically, so need never be tightened nor loosened. Hence "no repairing" "Contract"-in-the-winter fences, "Sag"-in-the-summer fences—these are not the

Dillon Hinge-Stay Fence

Make this point clear to enquirer: **The "Dillon" is the neatest, strongest, and most durable fence to be had.**

A SQUARE DEAL

FOR

Square Dealers

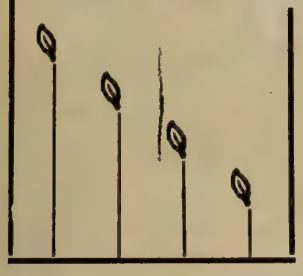
Square dealers, we take it, are those who try to give their customers goods that are "square" —honest all through. For forty years we have been giving all dealers the "square deal."

We make all the "ENTERPRISE" hardware specialties just as good as we know how—then we go out and tell the public of all the world about their merits. Square Dealers *distribute* them—they are already *sold.* Just ahead is the big demand for

"ENTERPRISE"

Meat and Food Choppers and "ENTERPRISE" Sausage Stuffers, Lard and Fruit Presses. They are being widely advertised now to the public. Write for our literature about them, including our new catalogue of all the "ENTERPRISE" specialties. Get ready for the biggest season you have ever seen on "ENTERPRISE" goods. We are ready. Get your share.

Increase your sale of "Enterprise" Meat and Food Choppers by using our new Booklet: "The Cook, Her Critic and—." We will send you a supply of these on request.



The Enterprise Manufacturing Co. of Pa.

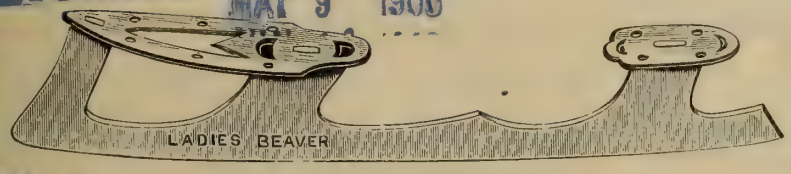
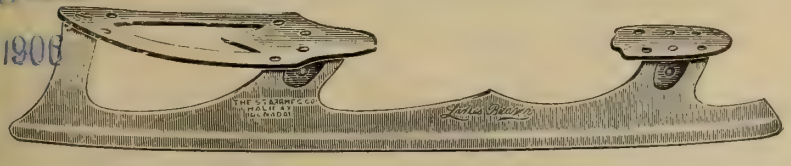
SKATES

If you have handled our Skates in the past we appeal to your experience as the ground for handling them this season. If you have not handled them, the general experience of the trade should be ample warrant for making a trial now. For nearly 40 years our Skates have been on the market, and their leadership during all that period is attested by the fact that wherever exhibited at International Exhibitions they have taken the highest awards.



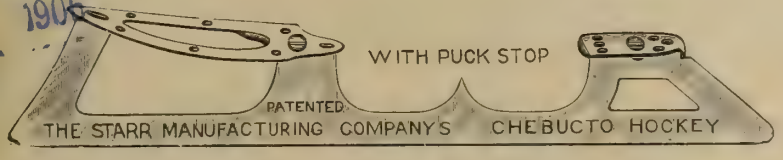
RETURNED MAY 9 1906 to owner cut Book 50 Page 16 W. S. E.



THE GENUINE ACME

The reason why you have never been able to find a self-fastening skate that would please your customers better than the **Genuine Acme** is that the **Acme** has the simplest and best fastenings. This Skate is made in all sizes and grades to fit every shoe and every purse.

RETURNED MAY 9 1906



LADIES' BEAVER (Plain Runner)

LADIES' BEAVER (Flanged Runner)

The Ladies' Beaver attaches direct to the boot and is the favorite for rink use, being extremely light in weight and unexcelled for its beauty of finish and design. It is a Skate you can recommend with confidence—as, indeed, is the case with all our Skates. For people who like a wider bearing surface on the ice than is possessed by the ordinary runner, there is the **flanged runner.** This Skate is made both in ladies' and gentlemen's sizes, and the latter are known as the **GENTS' BEAVER.**

RETURNED MAY 9 1906

THE CHEBUCTO HOCKEY

This Skate was always a good one, but it has been redesigned this year, and we have no hesitation in claiming for it that it offers the best value of any Skate on the market. It is made only in one quality, with welded and tempered runners, and tops of English cast steel rolled by the makers especially for our use.

Drop Head Sewing Machines

With and Without Automatic Lift

THE ALEXANDRA THE VICTORIA

THE ALEXANDRA is a perfect High Arm Sewing Machine, made of the finest materials by skilled workmen and containing all the latest and best features in construction. It is a marvel of simplicity, the acme of durability, the *lightest running* machine made, and is unexcelled for perfection of work. **THE ALEXANDRA** has many features. The take-up or thread controller is *absolutely positive,* being actuated by a rotating cam, giving *perfect control* of the thread, so that each stitch is pulled with *exactly the same tension. No other shuttle machine made at the present time possesses this improvement.* The machine is *self-threading throughout*, except the eye of the needle. The needle is self-setting and *cannot* be set set wrong. It is the *only machine* made with the driving pulley to the outside of the hand wheel. **THE ALEXANDRA AUTOMATIC LIFT** is the most desirable and the only perfect Automatic Drop Head Sewing Machine ever offered. It is the only one on the market having Positive Action, Double Locking. No Springs, No Vibration, Perfect Durability, Dust Proof Stationary Head Case, Ready Adjustment, No belting up of Balance Wheel.

The Alexandra Hand Lift Drop. Style No. 44. Open for Use.

THE VICTORIA is a *perfect* reciprocating shuttle, lock stitch, sewing machine, *light and easy running, well made, reliable, and honest,* and *cannot* be worn out by foot power use. It is guaranteed to be *superior* to any other machine of the same type—*i.e.,* the type of machine having the *thread-controlling mechanism* operated by the action of the needle-bar and spring take-up. **THE VICTORIA** will do the *widest range* of *family sewing*, from the *lightest* to the *heaviest,* and do it *perfectly.* It fully meets the demand for a reliable sewing machine.

These are Two excellent lines for Hardware Dealers. They yield a good margin of profit and are easily sold.

Sold Exclusively by

STRENGTH SAFETY SATISFACTION

Buying cordage is a serious business.

You are directly responsible to your customer for the rope you sell him. If you handle **our** cordage this need not trouble you, for we guarantee every foot of it, and invite your closest examination.

In cordage, the main quality to be sought for is **Strength.** This is where the seriousness of buying comes in. **Strength** is equivalent to **Safety.**

When your cordage customer realizes that purchasing from you ensures **Safety** and therefore freedom from damage, **he** will feel a wonderful **Satisfaction** in his account with you. **You** will be satisfied to continue buying from us, and **our Satisfaction** will be a matter of course.

"A Light to Lighten the World"

You can only know what Science has done and is doing when you have had occasion to call it into use. But you may have no personal needs for the direct benefits of certain of Science's triumphs and yet it may be possible for you to benefit thereby indirectly.

MAXIMUM LIGHT GLASS

is a fitting example of this. While perhaps few Hardwaremen require to have it "placed" in their stores, many of them have a "place" for it—keep it for sale. These Hardwaremen do not gauge the conditions of other buildings by their own fortunate location. They look beyond themselves. Besides, they reason that outside the cost price there is no expense attached to carrying **Maximum Light Glass**, and, as the glass never depreciates in value, that that cost price is always realizable. **Maximum Light Glass** is a marvellous daylight increasing system—"a light to lighten the world." The knowledge of its efficacy is world-wide; its patronage increasing every day. And you will be surprised when you are told that **most of the glass is retailed by Hardwaremen just like yourself—honest merchants, wending their way in some town or city, ever alive to opportunity, ever eager for new business.**

We will send you samples of this great glass and also our Booklet—FREE.
Will you send us your address?

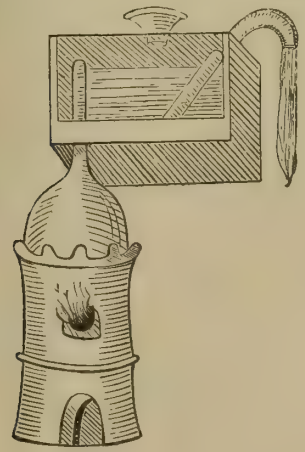
THE HARNESSING OF STEAM

PROFESSOR THURSTON, in his "History of the Growth of the Steam-engine," formulates the axiom that "Great inventions are never, and great discoveries seldom, the work of any one mind." This is true of every branch of knowledge, and the development of the steam-engine has not been an exception. The process has been one

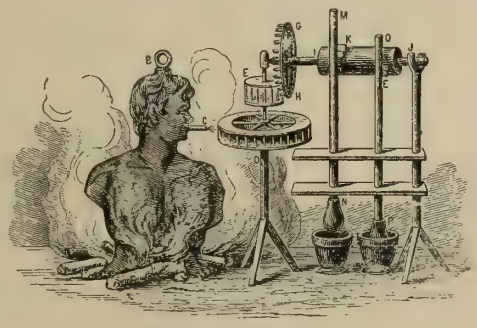


Herd's Engine, 200 B.C.

of gradual evolution more than invention, each step forward making the succeeding one easier, until the centuries produced a man who could take the suggestions contained in the crude methods which preceded him, and by vivifying them with the force of his own genius, produce a mechanism which in all essential principles stands unaltered up to the present time.

Hero, 200 B. C.

The earliest record of steam, or heat, engines is found in a manuscript written by Hero, a learned mathematician of Alexandria, Egypt, about 200 B.C., entitled, "Spiritalia seu Pneumatica." It is uncertain how many of the various in-

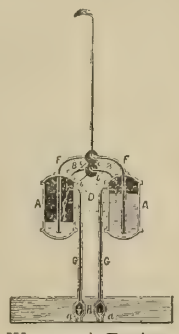


Porta's Apparatus, A.D. 1601.

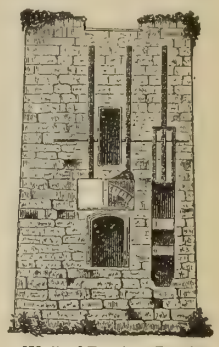
genious appliances described were devised by Hero himself, as he states in the introduction his intention to describe existing machines and to add his own. It may be, therefore, that the steam toy known as "Hero's engine" antedated the manuscript on pneumatics by many years.

The operation of this little machine, called the "Aeolipile," is readily understood. The closed vessel, AB, was filled with water, and upon a fire being quilt underneath, steam was generated, which passed into the hollow globe, A, through the pipe, MC. This steam escaping through the bent pipes, H and K, which faced tangentially in opposite directions, the globe was revolved by the reaction of the current.

This contrivance appears to have been used to a limited extent as late as the seventeenth century for small powers. Bishop Wilkins, writing in "Mathematical Magie," issued in 1648, describes Aeolipile as familiar and useful apparatus. "They are," he says, "frequently used in the exciting and contracting of heat in the melting of glasses or metals. They may also be contrived to be used for sundry other pleasant uses."



Hero also described several steam boilers of an elemental nature, the pressure being utilized to blow a horn, or make a bird sing, which seems to give

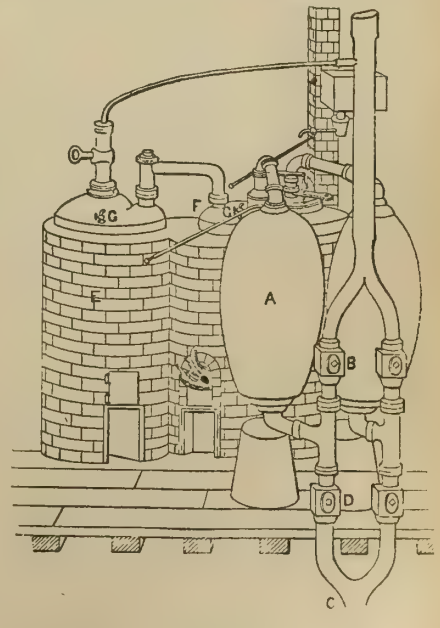


Branca's Steam Engine, A.D. 1629.

the modern steam whistle an ancient, respectable pedigree.

From 200 B.C. to the sixteenth century practically nothing is found in any manuscript bearing upon the subject of steam. About 1550 Hieronymus Cardan, a physician, mathematician and mechanic, called attention to the expansive power of steam, and the vacuum which could be produced by condensation. In 1569 Jacob Besson, a French professor of natural philosophy, published a treatise on the generation of steam and its properties. In 1571 Matthesius, in a sermon, described a steam power contrivance, and spoke of the power of a small quantity of confined vapor. About this time Leonardo da Vinci, engineer and painter, wrote a description of a steam gun, made of copper, which threw a ball weighing about 60 pounds. The steam was generated by permitting water in a closed vessel to fall on heated surfaces, and by the sudden expansion to eject the ball. In 1606 Giovanni della Porta published a treatise on pneumatics, in which he illustrated an appliance similar to Hero's fountain, but with steam instead of air as the displacing medium. He also pointed out that the condensation of steam might be used to produce a vacuum and suck up water from a lower level. His various suggestions were, a century later, applied by Savery to the first commercially successful steam pumping appliance.

In 1629 Giovanni Branca, of Loretto, Italy, designed the first steam turbine,



Worcester's Engine, A.D. 1665.

Wall of Raglan Castle.

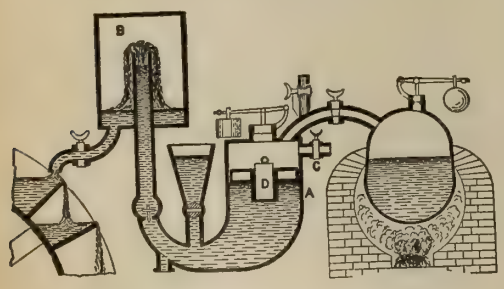
which was made like a water wheel, and driven by the impact of a jet of steam on its vanes.

The idea contained in this apparatus has since been successfully applied by modern engineers.

In 1663 the Marquis of Worcester published a description of his various applications of steam to useful purposes, under the singular name of, "A Century of the Names and Scantlings of Inventions by me already practised." There are no drawings in the book, and the de-

Savery's Pumping Engine, A.D. 1698.

scriptions are so obscure that it is difficult to determine the exact form of the various apparatus. It would appear, however, that to the Marquis belongs the honor of proposing, or accomplishing, the raising of water, on a compar-



atively large scale, by the agency of steam. One of his accounts is entitled, "A Fire Water-work," and is couched in quaint language.

"An admirable and most forcible way to drive up water by fire, not by drawing or sucking it upwards, for that must be as the philosopher calleth it, 'Intra sphaeram activitatis,' which is but at such a distance. But this way hath no bounder, if the vessels be strong enough, for I have taken a piece of a whole cannon, whereof the end was burst, and filled it three-quarters full of water, stopping and screwing up the broken end; as also the 'Touch-hole'; and making a constant fire under it, within 24 hours it burst and made a great crack. So that having a way to make my vessels, so that they are strengthened by the force within them, and the one to fill after the other, I have seen the water run like a constant fountain-stream forty feet high, one vessel of water rarified by fire driveth up forty of cold water. And a man that tends the work is but to turn two cocks, that one vessel of water being consumed, another begins to force and refill with cold water, and so successively, the fire being tended and kept constant, which the self-same person may likewise abundantly perform in the interim between the necessity of turning the said cocks."

The apparatus was actually used to elevate water for practical purposes at Vauxhall, near London, the materials being furnished by William Lambert, a brass founder. The biographer of the inventor suggests, after examining the walls of Raglan Castle, where the appliance was installed, the foregoing sketch as in accord with the description and evidence.

Worcester's Engine.

The two vessels, AA, were connected by the steam pipes, BB, to a boiler in the rear. the discharge pipe, E, is connected to the two vessels by the pipes, FF. GG are suction pipes with foot

Papin's Modification of Savery's Engine, A.D. 1705.

valves. Steam was admitted to the vessels, AA, alternately, and then condensing atmospheric pressure forced water through the suction pipes to fill them. While one was filling, the steam was forcing the water from the other out of the discharge pipe. One vessel being emptied the attendant cut off the supply of steam, and turned the current into the other, while the condensation of steam in the first one permitted it to fill again.

The Worcester machine anticipated the invention of Thomas Savery, 1698 to 1702, although the latter so far improved upon the details that the Savery "Fire-engines," as they were called, were used to quite an extent for raising water from mines, supplying houses, and towns, and even to drive water wheels.

Savery's Pumping Engine, 1698.

A serious difficulty, which prevented the more general use of the Savery engines in mines, was that the height to which water could be forced was limited by the pressure which the crude appliances of that early day would bear. It is surprising to find that pressures as high as 120 to 150 pounds per square inch were employed without even a safety valve. It was found no easy matter to deal with high-pressure steam, and Savery complained that it melted his common solder and forced him "to be at the pains and charge to have all his joints soldered with spelter." The machine was afterwards improved by the addition of a ball and lever safety valve, which was invented by Denis Papin in 1680, who also designed a modification of the Savery engine in 1705.

In this appliance water was admitted through the funnel. D was a floating piston to prevent sudden condensation from the steam coming in contact with the cold water. After the piston was driven down, the cock, C, was opened and the steam escaped. It was a non-condensing, single acting, steam pump, with the water and steam cylinders in one.

Papin invented the fire-box boiler, and also proposed to burn fuel on a grate within a furnace arranged with a down draught, the air entering above the grate, passing down through the fire, and from the ash-pit to a side flue in the chimney. He claimed that combustion was perfect, the formation of smoke entirely prevented, and the saving of fuel very great, all of which has a strangely familiar sound.

(To be continued.)

OTTAWA COMMERCIAL TRAVELERS' CLUB.

OTTAWA has always been a great Mecca for commercial travelers at the week-end. Many salesmen who work the Ottawa Valley, the Lake Superior district, and Eastern Ontario, make their home in the capital, and many others covering the same territory make it a point to take advantage of Ottawa's fine hotel accommodation over Sunday. Altogether, it is said that some three hundred "drummers" make their headquarters there.

For some years it has been felt that some means would have to be provided to permit the "Knights of the Grip" to get together, spend their off time pleasantly and profitably, and enjoy each other's association.

It was to fill the bill in that connection that the Ottawa Commercial Travelers' Club was conceived, and finally organized last week. Indications would point to a most successful existence for the new club, as the membership already reaches two hundred, and is rapidly growing.

The promoters of this enterprise have had in view not only their own well-being, but also the interests of the firms which they represent. One of the features of the club is a clause in the constitution which provides that the interests of the members should be guarded against legislation sought by individuals, or enacted by Governments, which might encroach upon their rights.

The long-felt want of some common meeting place is filled by the establishment of rooms for recreation and reading. It is also proposed to hold entertainments of various kinds, from time to time. The first of the series will be held at the Russell Theatre, in January, 1906.

Mr. J. H. Meikle

The club is very cosily located in rooms over the Bank of Nova Scotia, and it is proposed to make the accommodation more spacious after the first of the year, by taking in the remainder of the flat. The quarters will be fixed up attractively and the boys will have no occasion to "wander from their ain fireside."

At the head of the club are young men of push and enterprise, while the rank and file of the membership are imbued with the same spirit. This paper congratulates the Ottawa travelers on their energy, and wishes their venture every success.

The officers of the Ottawa Commercial Travelers' Club are as follows:

Honorary President — Major H. A. Bate, of H. N. Bate & Sons, wholesale grocers.

President—J. H. Meikle, representing Caverhill, Learmont & Co., wholesale hardware, Montreal.

First Vice-President—Albert Allard, of Prevost & Allard, wholesale grocers, Ottawa.

Second Vice-President — John Blyth, representing J. M. Garland, wholesale dry goods, Ottawa.

Treasurer—Sam Myers, representing the American Tobacco Co., Montreal.

Secretary—John A. Kealy representing John Labatt, brewer, London.

Committee—S. E. de la Ronde, Jr., of the F. J. Castle Co.; A. Eugene Landrian, wholesale tobaccos; Peter Gauthier, of James Robertson, wholesale boots and shoes, Montreal; Jno. F. Hawley, of the F. J. Castle Co.; W. C. McCarty, solicitor.

Limited.
HAMILTON, ONT.

CATALOGUES, BOOKLETS, ETC.

When sending catalogues for review, manufacturers would confer a favor by pointing out the new articles that they contain. It would assist the editor in writing the review.

Shadows of Coming Events.

A VERY neat pictorial post card was issued by the Moffat Stove Co., of Weston, Ont., for circulation amongst their customers prior to Thanksgiving Day. The card is arranged to fold, on the back being a picture of a fat turkey near the axe and block which most turkeys meet at this season of the year. On the inside a few well arranged paragraphs wish the recipients of the postal a pleasant Thanksgiving, and remind them that the Canada National Range is the finest on earth, and if their Thanksgiving turkey is cooked on it their Thanksgiving dinner will be a pleasant one.

A Hallowe'en Message.

The Borden Co., Warren, Ohio, and Toronto, have sent out a most attractive folder arranged in the form of a pumpkin, with eyes, nose and mouth cut out and having a red background. On the inside are illustrations of the Solid Adjustable Die Machine and Hand Stocks, together with some interesting poetry and prose, elaborating upon advantages of the Borden Co.'s goods. Readers of Hardware and Metal who have not received a copy of the pumpkin should write asking for one, and also for one of the catalogues recently issued by this company, the book being a neatly arranged 32 page and cover affair, well illustrated and containing a mass of interesting information regarding die stocks and machines of the well known solid-adjustable type.

Electrical Switches.

Section four of the supply catalogue of the Canadian General Electric Co., Toronto, has recently been issued, dealing with snap, flush and knife switches. The book contains about 80 pages, and is arranged for filing on the loose leaf system. Several hundred illustrations are given, together with full descriptions, prices, etc. Dealers in electrical goods should send for a copy of this catalogue, mentioning the name of this paper in their communication.

Electrical Supplies.

The Geo. Worthington Co., Cleveland, Ohio, have forwarded one of their latest catalogues of electrical fixtures and supplies, the book comprising nearly two hundred pages, and being illustrated by several hundred cuts of the various lines of supplies manufactured and sold by this company. Hardware dealers who are planing to carry electrical supplies as a side line should secure a copy of this catalogue, the company offering to send one to any dealer who mentions this paper.

A Picture Hanger.

The United Brass Mfg. Co., Cleveland, Ohio, have issued a new picture hanger, which they offer to send to any master plumber in Canada who mentions Hardware and Metal. Each plumber who receives a copy can pass judgment upon the merits of the production. Some won't like it, while others will.

Push Two Paint Specialties that Sell Well Everywhere

The progressive, energetic dealer will find a good paying field all around him for the sale of ***Sherwin-Williams Buggy Paint*** and ***Sherwin-Williams Enamel Leather Dressing.*** Every one who owns a vehicle, every livery stable and repair shop will like and use them after a trial. *We have a special plan* for pushing these goods to your profit, which we would like to explain to you in detail.

Sherwin-Williams Buggy Paint is a color in varnish which gives a desirable gloss finish. It is especially made for refinishing carriages, buggies, boats, sleighs, etc., and make them as bright as new.

Sherwin-Williams Enamel Leather Dressing is for refinishing buggy tops, curtains, etc. It keeps them from cracking and preserves their usefulness and good looks for the longest time.

Write our nearest offices today for a proposition that will be of profit to you.

Taps and Dies.

Butterfield & Co., Rock Island, Que., have forwarded Hardware and Metal a catalogue illustrating the stock and dies, solid die plates and new screw plates manufactured by them, the company also making taps and dies for all uses and tools for engineers and steamfitters' use. The cover of the book is quite substantial, and the sixty-four pages between the two covers contain a great deal of useful information for steamfitters. Readers who send for a copy of the book should mention Hardware and Metal.

How to Stop the Leaks.

Haines, Jones & Cadbury, Philadelphia, Pa., have issued a most attractive folder advertising their brass work, the central piece of the folder being an excellent reproduction of a photograph showing a plumber endeavoring to stop a leak on a wash basin fixture, which he has just installed. The company makes several lines of ground key, compression and fuller work. Their highest grade goes under the name of "Hajoca."

Skates.

A neat and seasonable twenty-page booklet on skates is being mailed to the trade by Frothingham & Workman, Limited, Montreal. All the different skates handled by this firm are described and illustrated, while reference is also made to other hardware articles sold by them. Send for a copy of the booklet and statement of discounts, mentioning Hardware and Metal.

Waterworks Catalogue.

The Jas. Morrison Brass Mfg. Co., Toronto, have issued a comprehensive catalogue of 48 pages and cover, illustrating the various types of malleable cast iron fittings, corporation service brass work, steam and gas fitters' tools, and bath room furnishings, manufactured by this company, the catalogue being compiled with a view to bring together such articles only as are used by water works in the laying of services in cities, towns and villages. The book is very well arranged, and is certain to be found very handy by any one installing water services. Readers of Hardware and Metal can secure a copy by mentioning this paper in their letter of inquiry.

Business Changes

Ontario.

William Wyatt & Son, stoves and tinware, London, are selling out.

M. G. Pettapiece, tinsmith, Manotick, is advertising his business for sale.

Coxall & Co., hardware and grocers, Colborne, have assigned to Richard Tew.

R. E. Walker, hardware merchant, Caledonia, has sold out to Clysdale & French.

Thomas Burnett, agricultural implements, Milverton, has sold out to H. Tucker.

W. Dallus Judus, machinist and bicycles, Barrie, has assigned to Thomas Beecroft.

Wilfrid Plante, paints, etc., Ottawa, assigned, meeting of the creditors 30th of November.

Wm. Scott & Son, hardware, tinware and stoves, Forest, are selling out to Scott & Cook.

McGill & McGill, agricultural implements, Paisley, have dissolved. James McGill has retired.

Purdom-Gillespie Hardware Co., London and Dorchester, have sold their Dorchester branch to Robert Farquhar.

The H. S. Smythe Co., hardware and specialties, Toronto, have sold out their specialty department to Mrs. Minnie F. Halls.

Quebec.

M. German & Co., plumbers, Montreal, registered.

Lemieux & Viens, blacksmiths, Edwidge, registered.

Viens & Savard, blacksmiths, Edwidge, registered.

H. H. Desautels, tinsmith, St. Hyacinthe, compromised.

The assets of J. H. Blais, tinware, Napierville, have been sold.

Vaillancourt & Harcy, lumbers and roofers, Montreal, registered.

The assets of J. H. Lacroix, hardware merchant, Shawinigan Falls, have been sold.

The assets of J. H. Daunais, grocer and hardware merchant, Montcalm, have been sold.

The stock of M. Philbin, hardware, etc., Montreal, has been damaged by water; was insured.

Western Canada.

Samuel Madill, blacksmith, Minnedosa, lost by fire.

Wakelin & Griffin, tinsmiths, Winnipeg, have dissolved.

John Trauneczek, hardware merchant, Francis, has been burnt out.

The stock, etc., of Northwest Machinery & Iron Co., Winnipeg, advertised for sale.

C. P. Lewis, agricultural implements, Alexander, has been succeeded by C. Christie.

W. R. Johnston, grocer and hardware merchant, Winnipeg, has assigned to C. H. Newton.

Northey & Campbell, agricultural implements, Holland, have been succeeded by W. J. Batters.

Greer & Grandy, agricultural implements, Oxbow, have been succeeded by Robertson & Grandy.

IT IS SAFE

LOOK HERE for the SAFETY LEVER

The hammer cannot hit the firing pin or the cartridge. *When you pull the trigger* (only) this lever rises and carries the blow to the firing pin.

New York Office: 99 Chambers St.

As safe in the home as a kitchen table and just as important. You *may* be so fortunate as to never need the services of a revolver to defend your life, property and the lives of those depending on your protection, but you can't tell—no one of the hundreds robbed and murdered every year suspected that he or she would be the next.

IVER JOHNSON REVOLVERS

are made for your protection—*in every way*. The "Iver Johnson" is the original safety revolver, and the only one with a safety mechanism worthy the name.

Hammer **$6.50**; Hammerless, **$7.80**. For sale by all Hardware and Sporting Goods dealers. Learn about them, anyway—it costs you nothing. If you will ask for it, we will gladly send you our bright little booklet, "Shots," together with our hand-some catalogue.

IVER JOHNSON'S ARMS AND CYCLE WORKS, FITCHBURG, MASS.

TRADE INQUIRIES.

Correspondents desiring to get in touch with any of the firms referred to should quote the reference number when requesting addresses. For information write to Superintendent of Commercial Agencies, Department of Trade and Commerce, Ottawa.

1063. A London firm manufacturing sizes, enamels and other specialties of interest to the paint trade, also glues and gelatine, wishes to get into touch with Canadian importers.

1064. A Midlands company manufacturing fire brick and fire clay goods is prepared to appoint a suitable Canadian resident agent for the sale of their goods in Canada.

1066. A Dundee house manufacturing jute yarns for rope making, jute cloth in the loom state and jute goods generally wishes to be placed in communication with Canadian buyers.

1069. A Yorkshire company manufacturing trolleys, trucks, hand carts and similar lines would like to find a sale for these goods in Canada.

1071. Inquiry is made respecting the opening in Canada for the sale of water meters by a firm manufacturing these goods.

1073. A London firm manufacturing glues, varnishes, sizes, paint removers, etc., desires to be placed in touch with Canadian houses handling such goods.

UNJUST FREIGHT CHARGES.

IN Hardware and Metal of October 21 we discussed the matter of special charges on freight shipments, in many cases charges being made which retailers do not understand and consequently feel that they are being imposed upon. In this connection Hardware and Metal has received the following letter from Purvis Brothers, Sudbury, and offers the use of its columns to other retailers or jobbers who can throw any light upon the matter under discussion. Messrs. Purvis Brothers write:

Editor Hardware and Metal: I desire to call your attention and through you the attention of the hardware trade generally, to what has been for years a gross imposition on the retail trade. I have reference to the charge made on every shipment from the cities of London, Hamilton, Toronto, Ottawa, Montreal, etc., for cartage. These amounts vary according to the size of the shipments and usually run about two cents per hundred pounds on small shipments and on larger lots about one and one-half cents. On September 9th our firm loaded in Montreal car 36808, weight 44,000 lbs., freight $132, cartage $6.60, advance 50 cents. What this latter item is we are at a loss to know. We are perfectly satisfied at our manufacturing and wholesale friends charging us for boxing and packing (the charges, by the way, are often very excessive) but we think it is a rank injustice that we should be asked to pay their cartage. I may say that we have to pay the manufacturers and jobbers packing and cartage and then we retail to our customers and have to supply boxing and packing free of charge and also pay cartage on all goods going out. It is quite evident that the retail trade for years have quietly submitted to an imposition and I feel convinced that in these days of business conventions this matter will be taken up by one of them and I look for the matter to be carried further in your journal by abler pens than mine.

I am, gentlemen, one of the long sufferers,

JAMES PURVIS,
Of Purvis Bros., Sudbury.

MICA IN CANADA.

A REPORT from the pen of Fritz Cirkel, M.E., Montreal, has just been issued by Eugene Haanel, superintendent of the Mines Branch of the Department of the Interior, and is announced as the first of a series on the economic minerals of Canada.

The report deals with two varieties of mica—muscovite and phlogopite. The occurrence of the former is limited to a few locations in Canada, and mining of this mineral has been attended with many difficulties, owing to the great dispersion of the deposits, their sporadic and sometimes erratic occurrence, and their inaccessible location. The phlogopite, or amber mica, industry, however, is in a flourishing condition, the output for the last year having a value of close to $200,000. This mineral was mined some 15 years ago in connection with phosphate in the Lievre and Templeton country, but at that time it was not valuable, and, therefore, was thrown away. To-day many of these old phosphate mines are in operation for the sake of the mica, the phosphate on account of its low value at present being mined as a by-product. Phlogopite mica is exclusively mined in Canada and its flourishing condition is due to the large demand for electrical machinery. Large companies like the General Electric and the Westinghouse are operating extensive cutting establishments in Ottawa, which are supplied with mica from their mines in the Ottawa county and from Sydenham. The next important producer of mica is India, but it appears that the Canadian article is preferred.

The report is a book of 130 pages, and deals with the physical and chemical properties, geographical distribution, uses and production of the mineral.

—

COOKING STOVES IN SOUTH AFRICA.

ALMOST all the cooking stoves sold in South Africa are of the self-contained type, which require no building into stone or brick work, and which are known as portable ranges, or if the best known style only is intended, as American stoves, says the correspondent of a daily paper. America inaugurated the type, hence the accepted designation. There was a reason why America should lead. Houses of timber and shingle, such as are common in the United States, could not have the usual Scotch or Yorkshire range, which is recessed into the wall. An independent range which could stand on the floor away from any wall was the only kind of stove possible in such habitations.

Thus America became proficient in the manufacture of such articles and introduced them into South Africa, where they found a ready acceptance. Their ability to stand clear of the walls was not the only reason of this acceptance, perhaps not even the chief reason. The fact that a farmer, miner or prospector could buy one along with 6 feet of sheet iron stove pipe in any hardware or general store, take it home in his ox wagon and erect it himself in half an hour constituted a convenience in a country where, in some parts, bricklayers and builders may not be easily found, and when found not easily paid.

The Way to Imitation.

The American stove which caught on in South Africa is that known as the "Pearl." Success bred the desire for emulation and showed the way to imitation. British makers, or, rather, Scotch makers—for practically all the British stoves imported into South Africa emanate from the Scottish iron foundries—copied the "Pearl" and "Dover" and other specially named stoves, usually, but not always, naming them differently, and the trade was divided.

The sizes sold range from 24 to 48 inches for ordinary household use. The oven is desired to be as large as possible, consistent with the width of the stove, and the grate ought to be arranged to burn either wood or coal. Such stoves are sold both with and without attached hot water boilers. Great Britain and America divide the trade between them about equally. Sweden entered as a third party and disputed possession of the market. In Cape Colony and north as far as Kimberley Swedish stoves became popular and are so still, but their acceptance did not extend to the other colonies.

The Swedish stove is different in principle from the American stove properly so-called. It usually wants a small brick foundation, although it may be had without. The superior water heating properties it possesses are its card to favor. But what a Scotchman can do once he can do twice, the second time usually better than the first. Thus Scotch stove makers copied Swedish stoves and these were soon in the field. The Scottish manufacturer had this advantage over his Swedish competitor, that whereas the Scandinavian had one style of stove to sell only, the Falkirk man had a variety af patterns, all of which were in demand. Thus shipments from the Clyde could be larger than from Stockholm and freight charges less expensive.

Made of Cast Iron.

All the stoves mentioned are of cast iron. Neither their construction, their heating properties nor their portability can be challenged; but their weak point is their liability to breakage during transport. The breakage of much cast iron goods for South Africa is heavy, and the breakage of stoves is exceptionally heavy, the despair of many importers. The loading and unloading of a ship is not always a gentle operation, and black stevedores and wagon drivers do not always wear kid gloves.

This is why French attempts to capture a share of the South African stove trade met with an immediate success. The "Economique" stove, as the particular French make finding favor in South Africa is called, had more to recommend it than the steel body. It is not cheap. But in this, as in every other department, South Africa's first concern is quality. Cheapness must go by the board when improvement in quality is offered. In the French stove the main features of the American style of portable range are followed, but not slavishly. The doors of the ovens open downward, forming shelves, and being of wrought iron they are so strong that a man may stand on one.

It is about four years since the "Economique" stove found its way to South Africa, and Scotch makers were a long time in being persuaded that their interest lay in meeting French competition as they had met the Swedish and American. But at last one Scotch manufacturer has bestirred himself, and a Scotch-French stove is now procurable, as is a Scotch-Swedish or a Scotch-American.

Present Position of Trade.

Such, in the main, is a brief history of the present position of the South African stove trade. It will develop along the lines of the recently introduced steel body stove. The loss and worry attending the shipment of cast iron stoves are too real and too heavy to make another course possible. A need of the South African market at present is an independent range of the American or French type with a hot water supply system, the whole to be as compact and transportable as its functions will allow. An attempt has been made to supply this requirement by America, and a few American stoves with easily connected up hot water cisterns have been placed in Johannesburg. There is room for the exploitation of this field by manufacturers able to design good heating apparatus and embody the features mentioned.

—

CHIMNEYS AT FAULT.

A HEATING expert who has had over thirty-two years' experience in the stove business, and has examined from four to five thousand complaints in that time, announces that, without recalling one exception, he has always found the source of complaint to be the chimney. According to this gentleman, mortar and brick obstruct the draft of the chimney, and occasionally a bird's nest causes the same difficulty. At other times, he has found that the mortar between the bricks of the chimney has been washed out by rain or snow or the expansion and contraction of the bricks have caused openings which permitted of a counterdraft from the side. This gentleman declares that it is just as reasonable to say that a stove does not draw as it is to say that water would not run out of a pail when tipped.

—

The D. Moore Company has bought a large plot of land near its present foundry in Hamilton, and the contracts have been let for a large four-story addition with a basement.

MANUFACTURE OF IRON AND TIN PLATE

THE history of the world is a story of a continuous iron age. Western Asia, the birthplace of the human race, knew iron in its first dawning of the record of time. Egypt, whose national existence dates from the second generation after Noah, the most ancient civilization of the world, at an early period was acquainted with the use of iron. A piece of pure iron was found under the obelisk removed from Alexandria to New York in 1880. This obelisk was erected some 1,600 years before the beginning of the present Christian era. In the interior of Africa, where nuggets and boulders of high grade iron ore are lying around loose, the Hottentots still adhere to the ancient methods and are making iron in clay ovens, using a layer of charcoal and a layer of iron nuggets and producing a blast by a number of bellows or air pumps. The product of this furnace is a lump of iron which is further reworked by heating and hammering.

Interior of Hunter & Ross' Store, Abernethy, Sask.

Previous to the last century improvements in the methods of producing iron progressed but slowly, while in the early ages excellent qualities of iron and steel were produced and various methods employed. Pieces of wrought iron were heated over a fire like an enlarged blacksmith's fire and hammered, reheated and hammered until the desirable thickness was attained. Then came the Tilt hammer, driven by water power to ease the hard manual labor of the smith.

The process of rolling sheets was invented in England in the early part of the eighteenth century. This was a marked step in the advance, in that it produced plates of uniform thickness and more pliable, also at a reduced cost. Since that time many labor saving devices in auxiliary machinery for detail work have been invented, but the fundamental principle in rolling black plates has remained practically the same.

Black Sheet Iron.

From iron ore, billets or bars are made sheet iron, six, eight or ten inches by one-quarter or more in thickness, according to the gauge of the sheet desired. These are cut into lengths twelve inches wide or over, according to the width of the sheet desired, the length of the bar representing the width of the sheet. These billets are put into an oven or furnace and thoroughly heated, and then put through rolls and rolled to the desired length. In the lighter gauges these sheets are doubled and then reheated and rolled, then redoubled, reheated and rerolled until from four to eight sheets are produced from one billet. After the rolling is complete, the sheets are allowed to cool and are then ready to be trimmed to the desired size. These sheets are then put into what is called an annealing oven, put under intense heat produced mostly by natural gas for a period of twenty-four hours and sometimes more. After the annealing, if they desire to make a fine cold rolled steel, the sheets are put through cold rolls, which smooths and hardens the surface and is called one, two or three pass cold rolled steel, indicated by the number of times the sheet has passed through the rolls.

Black cold rolled sheets are used in making the galvanized iron. These are immersed in a solution of sulphuric acid, then in a bath of clean water, then in a solution of weak muriatic acid. After coming from these solutions the sheets are ready for the galvanizing tank and are run down through a molten metal of zinc and come up through rolls arranged so as to clean off the surplus coating, and as the sheets come out of the galvanizing tank they are delivered on to a table with rollers which carry them to the end of the factory, where they are taken off ready to bundle. The coating on galvanized iron consists almost entirely of zinc, and the mottled surface of the galvanized iron is caused by the air striking the sheet and cooling the same as it comes out of the galvanized tank.

Wood's patent planished iron, or what is known as the American Russia, is made from purely a charcoal puddled iron, and after this is rolled into sheets and passed through the annealing oven it goes through a hammered process, under steam hammers which give it a flakey, hard and polished appearance. Part of the process in the manufacture of this iron is kept a secret.

Coating Iron With Tin.

Black sheets for tinning purposes are rolled after much the same process as sheet iron. Tin plate or tinned sheets are known as charcoal bright plates and ternes, or roofing plates. The process of coating iron with tin was invented in Germany about four hundred years ago. The people of that country kept the process a secret for over a century, but after a long and diligent search English manufacturers, near the end of the seventeenth century, discovered the secret. In England, soon after this discovery was made, the process of rolling iron sheets was invented, the tin plate industry growing rapidly, and for nearly two centuries England maintained its supremacy in the industry, until about ten years ago, when our country became a strong rival and is now energetically contending for the first.

Pure tin being comparatively costly, as a mere rust protector, a cheaper substitute was sought and found in the alloy of tin and lead. It is said this alloy was first used by the French, who called the plates coated therewith Terne.

After the black sheets have been pickled, annealed and cold rolled they are cleaned in a weak acid soldtion, then thoroughly washed in clean water, after which nothing is brought in contact with the sheets but pure palm oil and pure block tin, which produces our charcoal bright plates. The ternes or roofing plates are produced in the same way but with a mixture of pure lead and pure block tin. Until the establishment of the tin industry of the United States on its present footing the chief sources of the world's supply for two hundred years had been England and Wales.

Twelve years ago the United States manufactured about three million pounds of tin and terne plates a year, and imported 750,000,000 pounds from Great Britain. Last year the product of the United States reached a thousand million pounds, greater by several millions than Great Britain's total output, and not only supplied practically the entire home market, but contributed substantially to the country's trade in exports. The American Sheet & Tin Plate Co., which is the largest producer of sheet and tin plate in the United States and the world, produced last year from its mills one million base boxes of tin and terne plate or five hundred thousand tons. Its output in black and galvanized sheets was also about five hundred thousand tons, or a total of one million tons. The company produced about 80 per cent. of the tin plate manufactured in the United States and about 50 or 60 per cent. of the black and galvanized sheets produced in this country.

The wonderfully accurate methods characterizing the work as it is now performed by men and machinery in the great iron and steel works suggests an inventive climax, but thousands of scientifically educated men and hundreds of thousands of practical iron and steel workers employed by the various corporations are still evolving advanced conditions, seeking to invent new or to improve old systems and methods, to the end that progress shall not be arrested and that the standard of quality shall continue to advance. — Sebastian Hazenburg in the American Artizan.

NEATLY ARRANGED STORE.

WESTERN merchants are noted for their enterprise and desire to make their stores as attractive as circumstances and the varied assortment of goods they carry permit. No exception to this rule is the store of Messrs. Hunt & Ross, Abernethy, Sask., as can be seen in the accompanying illustration. Travelers say the store has one of the neatest arranged interiors in the west, outside the larger cities and towns, and the statements are not altogether in the nature of flattery.

The centre-piece of the display is the large bath, showing that the proprietors are alive to one of the best side-lines the western hardware merchant can adopt—that of plumbing and steam-fitting—a trade which practically belongs to the western hardwareman. In addition to the systematic display of stoves, tin and graniteware on the one side, the counters, showcases and shelf boxes on the other, and the paints and tools in the centre and at the back, it will be seen that the firm carries in stock several good side-lines, such as hammocks, croquet sets, sewing machines, stock food, and alarm clocks, every one of which should meet with a large sale in the district the store is located in. The cleanly floor and the metal ceiling sets off what our readers will agree is a most commendable store arrangement.

DANGERS OF GAS STOVES.

THAT there are some dangers accompanying the use of gas stoves is, of course, pretty well known to the trade, says the Iron Age. That they are not inherent with the gas stoves themselves, but with their attachments, which are in the hands of purchasers, is equally well understood. While there is no widespread suspicion abroad which works to the detriment of the sale of gas stoves, it is none the less necessary that the dealer should be ever in touch with leading rulings on the subject and that he should so far as possible protect his customers against any of the alleged dangers. There has recently, for example, been laid down by two inspectors of a fire underwriters' association, as the result of an investigation of the dangers following the careless use of city gas, the conclusion that rubber tube connections are the cause of an altogether too large proportion of gas conflagrations and they have consequently forbidden the use of such tubing except in laboratories. It is stated that the best grade of rubber hose does not contain over 15 per cent. of Para rubber, that other grades contain but 3 to 7 per cent. and that poorer grades are made from cloth covered with pitch. They assert that flexible metal tubing also is not always reliable.

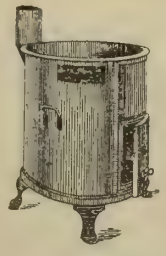
In the case of ordinary flexible tubing it is clear that when a leak in such tube is ignited the tube is quickly destroyed, with results not hard to conjecture. It should always be impressed on the customer that the fixture at the beginning of the tube is the one that should always be turned off rather than the fixture at the stove itself. The remarks of the authorities referred to on stove boards are equally interesting. They find that gas stoves mounted on wooden surfaces often char the boards and finally ignite the wood, and they say that asbestos or metal covering does not prevent the wood from charring. These findings apply as a whole to gas heating and cooking stoves and are not so applicable to water heaters, for the reason that these are generally installed by a mechanic and not by the householder.

ANCIENT GRECIAN HEATING.

ONE of the English building papers contains the following relative to domestic heating in ancient Greece :

Homer describes his princes undressing themselves in the palace to kill with their own hands the sheep, oxen and swine they were to eat at dinner, roasting the entrails and during the entertainment handing them to each other as delicacies. The repast being finished he shows them sitting for their pleasure on the piled skins of the animals they had slain and devoured and playing at games of chance, and one of them taking a pastern bone out of a basket in which it was lying and throwing it at the head of a beggar, but on missing its aim making a grease spot where it fell on the opposite wall. From this picture of the grossness of ancient manners it may be concluded that when the poet says Penelope's maids threw the glowing embers out of the braziers upon the floor and heaped fresh wood upon them, he did not mean to depict his immortal barbarians burning odoriferous fuel on purpose to sweeten what must have been a vitiated atmosphere. The fire that was quickly to blaze on the hearth had to diffuse the comforts of light as well as warmth, and the fragrant logs were known to abound with the resinous material of illumination. In the heroic age they had oil and tallow in abundance but were ignorant of the method of burning them in lamps, and the only use they appear to have made of wax was to put it in the ear to shut out sound.

Burning fuel was carried into the apartment where light was required, and sometimes placed on altars for the same purpose, and long thin pieces of lighted wood were carried in the hand when they moved from one place to another in the night. Coal, it has been thought, was known to the Greek naturalists. Theophrastus speaks of fossil substances found in Liguria and in Elis, in the way to Olympia, and used by smiths, that when broken for use are earthy, and that kindled and burned like wood coal.



The general fuel was green wood, and where that was unattainable other vegetables and even excrementitious substances were used on the hearth for combustibles. On days of ceremony it was also customary to burn fragrant substances. When Alexander the Great was at an entertainment, given in the Winter by one of his friends, "a brazier was brought into the apartment to warm it. The day being cold, and the king, observing the small quantity of fuel that had been provided, jeeringly desired his host," says Plutarch, "to bring more wood or incense." The supply of the precious firing appeared to the king too scanty for producing the required warmth, and if it arose from his host being niggardly of the costly fuel he hinted that some of the common sort would be acceptable.

Made only by

THE MOFFAT STOVE CO., LIMITED

WINNIPEG **WESTON, ONT.** CALGARY

No other manufacturer in the world has a stove just like this. In brief, it's the biggest, tallest and best stove of its kind ever offered. Places you absolutely beyond competition. Seize the opportunity and write for the agency to-day.

THE SUCCESS OF THE PEERLESS ICELAND

led us to make other things which appeal to the women in the home and are handled by the same jobbers and retailers. The trade, we think, recognizes that they can count on us to help move anything we make.

Peerless Iceland Freezer

(Ice Cream in Three Minutes)

Simplest freezer made. Patented dasher does the work. Better than ever this year. The product of our new factory—better facilities. This, and strong advertising make it the freezer the women ask for.

Frezo Freezer

An excellent freezer, double scrapers fastened same way as in Peerless Iceland. All sizes.

Dana Mop Wringer

Wrings the mop dry in five seconds—does it without wetting the hands and without danger of upsetting the bucket and wetting the feet. You stand in a natural position—both feet rest firmly on the floor. The latest, the simplest, the best Mop Wringer on the Market.

Dana Iceless Refrigerator

For the window. No ice bill. A refrigerator that takes up no floor space and is run without ice eight months in the year.

Ask your jobber.

THE DANA MFG. CO.

New York, 10 Warren St. **Cincinnati.**

(For the window.)

Tri-Use Cooker

PATENTED

PATENTED

Every dealer should stock a few of these Cookers. They sell wherever introduced.

No well-appointed kitchen is complete without one, and after once using it a woman will not do without it.

Can be used in various ways, viz., as a double boiler for cooking cereals of all kinds, as a steamer for vegetables, puddings, stale buns, bread or cake, or as two separate saucepans, etc.

Advertising matter for general distribution sent free to any dealer.

PLUMBERS' CASE IN COURT.

BAD legal advice appears to have brought the Toronto Master Plumbers and Steamfitters' Association into a peck of trouble, a number of their most active members being charged with conspiracy before the police court, the adjourned case coming up for trial next Monday. With the master plumbers are several members of the Journeymen Plumbers' Union, they also being charged with the same offence, the complainant being J. B. Reeves, an ex-member of the Master Plumbers' Association. While it would be out of place to discuss the case until the evidence is given in open court, the trade generally are interested in the facts given out by the crown attorney.

* * *

On Monday last, Crown Attorney Curry, armed with a search warrant, visited the offices of the association and after an investigation seized certain books, papers and record cards which he will use as evidence in court. Mr. Curry stated that "at the time tenders were being received for the Isolation Hospital information goes to show that fraud was committed. The association declared this job an open contract. The master plumbers placed their tenders before the association before they sent them to the corporation. The amounts of these tenders were added, and an average obtained. The plumber whose figures were nearest the average was given the contract. Five per cent. was added to the amount of the contract for the association, besides enough to give every person who had put in a tender about $20 apiece, to be paid when the money was received from the city. Then a number of contracts were submitted to the corporation, but none were allowed to tender within 10 per cent. of the amount of the chosen plumber's figure. In this manner the city was shuffled out of about $250. As far as I have heard up to the present time, the Master Plumbers' Association and the Journeymen Plumbers' Union are about ready to hold up their hands," concluded Mr. Curry. "I think the master plumbers will be willing to sign an agreement to disband in addition to signing bonds not to form a similar association in the future."

In the police court on Tuesday Mr. Curry announced his willingness to go ahead with the prosecution, but the case was remanded for a week in order to allow the Crashley case to be disposed of the meantime.

* * *

Until a week ago the members of the Association did not look upon the proposed investigation as a serious matter, but a change has taken place and some are even predicting that it will be necessary to disband the association and call in an official to act as liquidator. The sensational articles in the daily papers have weakened the confidence of the public and some believe that the present organization cannot regain public favor.

* * *

The majority of the association members are saying little, but awaiting the decision of the court. They know they have done nothing to deserve the condemnation of the public nor to fear the imposition of heavy fines or terms of imprisonment and they feel certain that the case will work itself out for the good of the trade. If there has been any wrong-doing the guilty ones should suffer and if it is shown that the by-laws of the association (which is a chartered company) need amending the rank and file of the membership can be trusted to make the necessary changes. But to disband the association and agree to remain unorganized there is not the slightest intention. If the present association must be disbanded a new one will spring into existence as the plumbers and steamfitters are too intelligent a body of men to remain unorganized in these days of organization.

* * *

The evils which are said to exist in the plumbing trade are not a result of the organization of the association. Before the trade organized, men agreed amongst themselves as to who should get certain jobs. The association has done much to regulate and improve trade conditions. It has cut down the average profit of 33 per cent. to 25 per cent. and it has made it possible for young firms to establish themselves without cutting each other's throats in order to get contracts. It has made it possible for the master plumber to pay better wages and to meet his notes as well as allowing him to do better work and instal a higher class of materials. The association has aided in the enforcement of sanitary laws and by adopting examinations for apprentices and entering into an agreement with the journeymen has stopped the doing of jobs by botch plumbers, the old system allowing the journeymen to do jobs in overtime, very often with his employer's materials. The association has brought order out of chaos and if the present organization does not live another body will be formed to take its place.

* * *

Why should the master plumber or steamfitter be called upon to work for days making up estimates for a large contract without remuneration? The lawyer or the architect will not prepare a brief or a plan for nothing. The master plumber must be remunerated in some way if the architect invites him to tender for a job and after figuring several days he finds he is only one of a number who have done likewise. In several large American cities the master plumber charges for his time in making estimates. In Toronto the "I.O.U." system has been used to a limited extent. It may be advisable for the trade to adopt the American system, but it can only do so through organization.

* * *

As Hardware and Metal has said before sensational newspapers are making a mountain out of a molehill. There are certain points in which the workings of the association must be changed in order to do justice to the smaller firms as well as the general public. Action should have been taken inside the organization, but it matters little how it is done so long

as the proper action is taken. It is not in the interests, however, of association members or non-members to continue pulling each other's hair. It may be hot stuff for the sensational newspapers, but it will mean cold dollars for the combatants in the legal fight and the commercial reports may contain several death notices if the controversy continues.

* * *

The supply houses are interested in the Crashley case but as they are now selling openly to anyone engaged in plumbing work, they have no cause to fear the outcome. It will be a surprise if the case is not dismissed without going to trial.

THE PRICE-CUTTING EVIL.

WITHIN the past month an open market has been declared on lawn mowers and iron pipe in the hardware and plumbing markets, the former still being on the slaughter block. It is not our intention to discuss the reasons why price-cutting has been resorted to, but rather the effect of the open competition.

Lawn mower manufacturers having failed to come to an agreement upon prices for 1906, travelers are underbidding each other in an endeavor to secure the retailer's trade. On the surface it would appear that the manufacturers were enjoying a battle at their own expense and the retailers were busy preparing to reap a harvest by booking orders for next season's goods at much below the regular prices. But things are not always as they seem. When next Summer comes around the effect will be seen in the price-cutting amongst retailers. Some will have bought large stocks at low prices and will feel themselves justified in slashing prices in this line in order to draw trade on others. Those dealers who have not bought so shrewdly will have to meet this competition at a loss to themselves and strife and ill-feeling will have been engendered. In some cases price-cutting in other lines will be resorted to, the result being financial loss to the merchant, whose prosperity or adversity is reflected back upon the jobber and wholesaler. In the case of iron pipe there does not seem to be the same opportunity for price-cutting as the master steam-fitters are organized into an association and they use the iron pipe themselves, while the hardware merchant buys lawn mowers to sell over his counter for other people to use. And in most cases where merchants buy goods cheap they sell them cheap and derive no benefit from the bargain.

From every standpoint the value of business organizations would seem to be apparent. The manufacturers of lawn mowers have not found their organization effective enough and have failed to agree on prices which would allow themselves a fair profit. They cut prices and in the absence of a strong retailers' association the whole trade is likely to feel the bad effects of the price-cutting war. Had Ontario, Quebec and the Maritime Provinces as effective a retail organization as the hardware retailers in Manitoba and the Western Provinces have, the evil could be checked and the manufacturers and jobbers could suffer alone. But without organization the retailers are at the mercy of their most reckless price-cutter.

Although there is little evidence of it amongst hardware dealers in Ontario and Eastern Canada it is dawning with greater force on the business men of the civilized world that business rivalry does not call for personal enmity and that it is better to co-operate together than to compete in a cut-throat fashion. It is becoming more clearly understood that business success does not come from hating the other fellow who is in the same line of business, but from a broad and liberal view of affairs by which men may be the warmest friends while in the same business, each profiting by the other's experience.

The coming Winter should not pass by without something being done to bring into existence a stronger and more effective organization of retail hardware merchants than exists at present in Eastern Canada. The hardware section of the Retail Merchants' Association has not proved itself to be strong enough to organize the trade as it should be organized. Is it not time for a Retail Hardware Dealers' Association to deal with the price-cutting and credit system evils ?

THE TRADING STAMP EVIL.

THE new law relating to the giving and receiving of trading stamps has come into force with the present month, and is of vital interest to every retail merchant throughout the Dominion.

The issuing of these stamps had become a menace to the multitude of small traders in certain towns, and it is with an immense degree of satisfaction that the death of the system will be heralded.

The law is a very strong one, and brings all offenders easily under the Criminal Code, as well as greatly enlarging the classification of schemes coming under the head of "Trading Stamps," and it is incumbent upon every retailer to watch with vigilance any attempt to evade the law in his locality.

Already there are signs that the corporations which were recently prominent in this line of business are endeavoring to devise means to evade the provisions of the new law, and there is no doubt that these institutions will "die hard," but it was clearly expressed at the passing of the Act that if any part of it needed strengthening or amending it would receive consideration at the next session of Parliament.

We cannot press too strongly on all sections of retailers to awake to the opportunity and do all in their power to purify retail business methods, and look askance on any attempt to revive this old evil under any new garb.

LITTLE MONEY IN CEMENT.

ABOUT five years ago the agents of American cement machinery supply houses invaded Canada, and with the assistance of promoters endeavored to organize many cement manufacturing companies, as far as possible inducing subscriptions of local capital from men located in districts where works could be established. Glowing stories were told of enormous profits to be made in cement, but Hardware and Metal, in response to many requests for information from merchants, warned its readers that, while reasonable profits might be looked for, the promoters' promises should be taken with the proverbial grain of salt. It was pointed out that there were a sufficient number of companies then in existence to supply the demand, and the natural growth of the market would be met by the expansion of the existing plants.

The warning was timely, and many of our readers kept their money out of cement. Time has shown the wisdom of the advice given, as some companies organized have never earned, or never will earn, a dividend of one per cent. on the investment. In the purchasing of plant and machinery much grafting was done, and in some cases it is safe to say the works could be duplicated for fifty per cent. of the original investment.

Prices of cement have decreased from 25 to 50 per cent. in the last few years, owing to the competition of the American manufacturers, whose large output and nearness to coal supply enables them to produce much cheaper than can be done in Canada, where a duty must be paid on each ton of coal consumed. The increasing competition of the various plants in Ontario has also much to do with the drop in prices. The present season has been the most profitable in the history of the trade, and while it is too early for the operating companies to estimate their year's business, it is

safe to say that very few have made enough to pay dividends.

The costly experimenting, sometimes for years, before cement of the proper standard can be produced, makes investment in cement manufacturing enterprises a risky undertaking. The large number of plants already in existence, and the probable establishment of another one in the eastern part of Ontario by capitalists interested in the industry in the United States, would make it appear that there would be no possibility of a shortage during the next few years. Cement is coming into use in dozens of now processes, but the existing plants, protected by the dumping clause, are likely to have to compete actively for business amongst themselves for the trade of the Dominion for the next decade.

WESTERN ASSOCIATION PROGRESS

SECRETARY McROBIE writes Hardware and Metal from Medicine Hat stating that the organization of hardwaremen in the newly constituted Provinces is proceeding as satisfactorily as in Manitoba. Although the work in Manitoba was not yet completed, Mr. McRobie some little time ago directed his energies to the work in Saskatchewan and Alberta in response to urgent Macedonian calls for help. In September he organized the trade on the Arcola line of the C.P.R. and also did some effective work in the neighborhood of Regina and at other points on the main line. Early in October, in company with W. A. Coulson, the secretary of the Retail Merchants' Association, he visited all the towns on the Kirkella branch and the hardwaremen readily fell in line with the movement. The main line from Wolseley to Elkhorn has also been covered by Mr. McRobie with good results and he is now at work in Alberta.

From small beginnings the Western Hardware Association has in the sixteen months of its existence gained a large membership and in all parts of the west hardware dealers bear testimony to benefits derived from membership. The association is making a determined effort to deal effectively with the long credit evil, and in many parts of the west members closed their books on Wednesday, November 1st, with the intention of allowing no credit until April 1st. In their efforts to stamp out this long standing evil the association members have our best wishes for success.

The Jenckes Machinery Co. are supplying a Corliss engine and two steel boilers to Mr. Tobin, M.P., who is rebuilding his saw mill at Brompton, Que., and is also establishing a planing mill at the same point.

SUCCESSFUL JOBBERS AND SALESMEN.

No. 4.

AMONGST the salesmen calling upon the plumbing and heating trades throughout Ontario there are few who are better and more favorably known than the gentleman whose portrait is reproduced with this sketch, Mr. William Linton, of Toronto, who sells the popular Canadian enamel ware made by the Standard Ideal Sanitary Company, Port Hope.

Mr. Linton is 41 years of age and has had an experience of over 20 years in the hardware, heating and plumbing trades, being originally an apprentice to the hardware business, serving four years with one of the best hardware stores in England. Coming to Canada

Wm. Linton, Toronto,

Representing A. D. McArthur & Co., Selling the Standard Ideal Sanitary Company's Enamelled Ware.

Mr. Linton became head salesman in the stoves and hardware store of John Milne & Company, on Yonge street, Toronto, selling Burrow, Stewart & Milne stoves, remaining with this firm for eight years until the store was burned out in the great Simpson fire. After this he went into partnership with Mr. Coutie of the same firm, taking the salvage stock and doing business in the same line for six years at 1 Queen street east and then dissolving partnership with Mr. Coutie.

At this time Mr. Linton entered into a contract with A. D. McArthur & Co., Colborne street, Toronto, to represent the Ideal Company, Detroit, on the road, and after Mr. Bush, manager of the latter company, established the Standard Ideal Sanitary Company at Port Hope, the Detroit line was dropped and he has since been engaged in selling Standard Ideal goods in all parts of Ontario. Illustrative of the increasing popularity of the Canadian ware it is known that although the plant of the company at Port Hope was doubled in size last Winter the output has been readily disposed of, the factory having, in fact, been oversold. It is the intention of the company to again double the size of the plant during the coming Winter.

Mr. Linton is at present particularly interested in the sale of the products of the Star Iron Company, Montreal, more especially in the Star boiler, for which he is now agent for Ontario, meeting with considerable success in his efforts. Mr. Linton is an enthusiastic sportsman having personally organized the East Toronto Athletic Club, of which he is president. During the first couple of years spent in Canada he played cricket with the champion East Toronto team, helping the club to win the championship. Latterly he has played ball with the supply men occasionally, being also a yachtsman and keeping a sailing skiff and bunch of hounds for amusement in Summer and during the hunting season.

IMPORTANT LEGAL DECISION.

A DECISION was recently given by Judge Klein, which will be of interest to shippers of oil who sell at a price "freight prepaid."

A Toronto wholesale paint and oil firm sold a barrel of linseed oil to their customer in the west, and it was shipped in good order, but arrived at destination leaking. The consignee refused to accept or pay for the oil, insisting that the shippers should deliver him the full number of gallons invoiced. The firm who sold the goods contended that they delivered the barrel to the railway company full and in good order, and that if there was leakage it was the fault of rough handling by the carriers, and that the claim for shortage was a matter for the purchaser and the railway company to settle between themselves. The barrel of oil was, in the meantime, lying in the railway freight shed at destination and the contents leaking out. Finally the case was tried in court, and the judge decided that the consignee should pay the full amount of invoice and all costs incurred in the action.

The Alberta Portland Cement Co. is asking a bonus and the nuisance ground for a site in connection with their representations to the Calgary council. The company's initial expenditure will be $300,000, to be increased to $500,000.

PERSONAL MENTION

Quebec.

A. Arel, contractor, of Beauharnois, was in Montreal this week.

L. P. Beaulne, hardware merchant, of Hawkesbury, Ont., visited Montreal this week.

A. Trudeau, general merchant, of Windsor Mills, Que., visited Montreal recently.

Mr. Curry, of the Rhodes-Curry Car Company, Amherst, N.S., was in Montreal last week.

W. H. Evans, of the Canada Paint Co., Montreal, spent a few days this week in Toronto.

Wm. Hymen, of Gaspe, was among the out-of-town buyers in Montreal during the past few days.

Jos. J. Bouchard has recently been appointed manager of the Star Iron Foundry, Montreal.

W. S. McVicar, of Harrington, was a caller at some of the Montreal warehouses during the week.

A. R. Gosselin, general merchant, of St. Alexander, paid a visit to Montreal wholesale houses this week.

A. E. Bregent, dealer in sporting goods, Montreal, was married recently to Miss Gravel of the same city.

W. C. Strader, general merchant, of North Williamsburg, Ont., paid a business visit to Montreal this week.

J. W. Harris, of the J. W. Harris Contracting Company Montreal, was absent in Quebec for a few days this week.

A. McDonald, tinsmith and stove dealer, of Huntingdon, Que., visited Montreal this week on business with the jobbers.

Henry Steele, of Hatfield & Co., steel merchants, Glasgow, stopped in Montreal last week on his way back to the Old Country.

L. Archambault, merchant and manufacturer of butter and cheese, Grandines, visited Montreal on business during the past few days.

W. C. Webster, of W. C. Webster & Son, wholesale and retail hardware merchants, Coaticook, Que., was in Montreal a few days ago.

James R. Wilson, managing director of Thos. Robertson & Co., Limited, Montreal, returned from the Old Country on the Bavarian last week.

J. S. M. Dougall, president of the Dominion Commercial Travelers' Association, and head of the firm McCaskill, Dougall & Co., varnish manufacturers, Montreal, is at present paying a visit to Winnipeg.

P. E. Bouillier, formerly manager of the Star Iron Foundry, Montreal, has joined Mr. Lesperance of the same city in forming the firm Bouillier & Lesperance, contractors, with headquarters on St. Catherine street.

Amiot, Lecours & Lariviere, hardware merchants, St. Lawrence street, Montreal, are showing a beautiful and cleverly constructed window display this week. Only staple hardware articles are used in the window, which is gotten up to represent a suspension bridge.

Guinette & Frere, hardware merchants, St. Catherine street, Montreal, have assigned, and their affairs are now in the hands of Mr. Lamarche, curator. It is understood that nearly all the local wholesale houses are interested, though none for very big amounts.

A. H. Nelson Kennedy, hardware merchant, of Buckingham, Que., has been showing some fine windows of late, making special displays of sporting goods and ammunition. Hardware and Metal expects to reproduce some of Mr. Kennedy's windows in the near future.

During the Sherwin-Williams Company's convention in Montreal this week many of the local retailers have been showing a full line of S.-W. goods in their windows, together with the ubiquitous "Cover the Earth" sign. Particularly fine displays were those made by L. J. A. Surveyor and Henry Morgan & Co. (Colonial House).

Bellhouse, Dillon & Co., cement jobbers, Montreal, have been condemned to pay $5,602 to the J. H. Ashdown Hardware Co., Winnipeg. The defendants had agreed to fill a contract made by the plaintiffs with the city of Winnipeg for Portland cement, agreeing to furnish certain grades, and to pay for the bags returned. The cement failed to stand the tests imposed by the city engineer of Winnipeg, and the defendants failed to pay for the bags returned, so that Mr. Justice Dunlop condemned them to pay the amount above named on both these counts.

Ontario.

R. Blain, M.P., hardware merchant, Brampton, was a visitor in Toronto this week.

Andrew Mann, of the Canada Brass & Supply Company, London, was a visitor in Toronto on Thursday.

Alex. McMichael, manager of the Toronto branch of the James Robertson Company, is on a business trip to Winnipeg.

J. W. Benson, Toronto manager of the Sherwin-Williams Paint Company, is in Montreal attending the convention of S.W.P. salesmen.

E. W. Topping, representing the Safety Door Hanger Company, Hamilton, was a caller at Hardware and Metal's Toronto office on Wednesday.

Stauntons Limited, wall paper manufacturers, Toronto, will erect immediately a $40,000 building, an addition to their present plant on Yonge street.

Alex. Slater, formerly manager of the Sherwin-Williams Paint Company's Toronto branch, but now the company's representative at San Francisco, was a visitor in Toronto this week.

M. E. Murray, Toronto representative of the Borden Company, Warren, Ohio, visited Montreal last week and appointed George Robertson, of that city, to represent the company in Quebec Province.

The Aikenhead Hardware Company, Toronto, has purchased at a price in the neighborhood of $60,000, the building at No. 17 Temperance street, known as the Dunlop Tire building, and will move into the new place in the near future.

The Taylor-Forbes Company expect to get settled in their new offices and warehouse on King street west (opposite the Mercer Reformatory) during the coming week. A large stock of Sovereign radiators will be carried in the warehouse.

Messrs. H. & S. Smythe, hardware merchants, College street, Toronto, are taking over the store adjoining their present quarters and will branch out into a large house furnishing business on departmental store lines. They have disposed of their branch store on College street near Bathurst.

F. A. Coons, manager of the hardware department of A. Sweet & Co., Winchester, Ont., has just returned from a trip to Winnipeg, Moose Jaw, and other western points. Mr. Coons, who is an enthusiastic sportsman, found some excellent shooting during the trip, and altogether the impressions he formed have made him another convert to the western fever.

Maritime Provinces.

James Ross, president of the Dominion Coal Company, has arrived home after an absence of some weeks in Europe. While away he made an inspection of the leading collieries in Great Britain, Germany and other European countries, and obtained much information. Mr. Ross states that excellent progress is being made at Sydney, and the company's annual statement will be a good one, and he ridicules the report that English interests are securing control of the company.

Western Canada.

Fred Quinn, of Ross Bros., Limited, Edmonton, has been enjoying a vacation at his home in Vancouver. It is said the Vancouver boys sat up nights to hear Mr. Quinn tell his Scotch story, now famous throughout the west.

C. D. Waldon, manager of the Pease-Waldon Co., Limited, of Winnipeg, returned recently from an extended business trip as far west as the coast. Mr. Waldon left a trail of Pease Economy furnaces in the territory he covered.

NEW PREMISES IN MONTREAL.

John Round & Son, Limited, of Sheffield, England, famous the world over for their "Tudor Works," and at Hatton Garden, London, have decided to still further pursue their aggression for business in Canada by opening commodious warerooms in Montreal, at the Coristine Building. They will carry an immense stock of all the lines manufactured by their celebrated goldsmiths and silversmiths, comprising gold, silver, electro plate on nickel, and Britannia metal goods, also silver and plated cutlery, steel cutlery, oak and inlaid goods with silver and plated mounts. The firm have a reputation extending over half a century, and they need no introduction to the trade in Canada.

Their managing representative, Mr. J. R. S. McLernon, is a capable and experienced business man, and has had experience in the Canadian trade with one of the largest Canadian manufacturing jewelers and goldsmiths. Mr. McLernon will make his headquarters in Montreal, and special attention will be paid to the vigorous advertising campaign carried on in this paper.

MARKETS AND MARKET NOTES

(For detailed prices see Current Market Quotations, page 74.)

THE WEEK'S MARKETS IN BRIEF.

MONTREAL.

Yankee Tools have been advanced.

Canada Plates—New lists are out with prices higher.

Ingot Tin is now quoted 36½c. to 37c.

Pig Lead is very firm at $3.90 to $4.00 per hundred pounds.

Pig Iron has been advanced in several grades.

Merchant Steel shows some advances.

Black Sheets are quoted higher than last week.

Bar Iron has advanced to $1.97½.

Old Zinc is now 3¾c.

Old Rubbers are firmer, and are quoted at 7c. to 7¼c.

TORONTO.

Linseed Oil Crushers have advanced their quotations another cent, but the list prices remain unchanged.

Iron Pipe Manufacturers have advanced prices five per cent., but the open market on pipe and fittings continues.

The Stanley Rule and Level Company have advanced their prices on planes.

North Bros. have advanced their quotations on Yankee tools.

Disston's Saws have been advanced in price.

Old Material—No. 1 wrought iron, old rubber, and mixed rags are all quoted higher.

WINNIPEG.

Turpentine has advanced 8c. per gallon.

Horseshoes have been advanced; iron, 10c. and steel, 15c.

Files—Discount on Arcade files are now 75 instead of 70% and 10%.

Loaded Shells—Eley's & Kynoch's soft and chilled have advanced $1.50.

Galvanized Sheets have been advanced 15c.

Tinplates XXI have advanced 50c.

Bar Iron has advanced 10c.

Sleigh-Shoe Steel has advanced 10c.

Spring " " " " 25c.

Sheet Zinc has advanced 75c.

Quebec Hardware Markets.

Office of HARDWARE AND METAL,
232 McGill Street,
Montreal, November 3, 1905.

THE first fall of snow which occured this week, even though very light has scared many of the country retailers into hurrying up their orders for late Fall and Christmas goods. The result has been seen in a largely increased turn-over in all the local jobbing houses. General hardware lines are selling very fast, but there is a special run on cow chains, blankets, halters and similar goods. Rifles also are still going out very fast.

The only price changes of any moment are those in iron, which are reported in the metal markets, and in Yankee tools, which have been advanced by all the jobbers. Yankee screw driver No. 30 is now selling at $16.80.

The sale of skates has materially strengthened during the week, owing, of course, to the break up of the river. The bulk of these skate orders, as well as those for bells, are coming in much later this year than last, as in some sections retail dealers carried over large stocks from last winter.

Nails are very much stronger this week and there are persistent rumors that the present list will shortly be withdrawn. On the strength of this feeling these goods are going out in a large volume.

Axes—Business is increasing right along and is in a most satisfactory condition. Our quotations are as follows: Chopping axes, unhandled, $6 to $9.50 a dozen; double bitt axes, $9.50 to $12 a dozen; handled axes, $7.50 to $9.50; Canadian pattern axes, $7.50 a dozen.

Handles—Prices are unchanged and are still quoted as follows: Axe handles No. 3, $1.25; No. 2, $1.50; No. 1, $1.90 a dozen; adze handles, 34 inch, $2.20 a dozen; pick handles, No. 2, $1.70; No. 3, $1.50 a dozen.

Sewing Machines—Trade is very brisk. Nearly all standard makes being sold rapidly. Our quotations are as follows: Hand sewing machines, $11 each, net; complete machines, with stand, $18.00 and up, according to quality.

Lanterns—Jobbers have not yet changed their prices which are still as we have been quoting them for some time past. Cold blast, $4.50; No. 0, Safety, $5.00.

Rivets and Burrs—These goods are enjoying a good run in common with all the staple hardware lines. We quote: Best iron rivets, section, carriage and wagon box, black rivets, tinned do., copper rivets and tin swede rivets, 60, 10 and 10 per cent.; swede iron burrs are quoted at 60 and 10 and 10 per cent. off new lists; copper rivets with the usual proportion of burrs, 45 per cent. off; and coppered iron rivets and burrs in 5-lb. carton boxes at 60 and 10 and 10 per cent.; copper burrs alone, 30 and 10 per cent., subject to usual charge for half-pound boxes.

Screws—We quote as follows: Round head, bright, 82 1-2 per cent.; flat head, bright, 87 1-2 per cent., brass, round head, 75 per cent.; brass, flat head, 80 per cent.

Bolts and Nuts—No new conditions are evident in the market at present. Prices are unchanged, being still quoted: 3-8 and smaller, 60 to 10; 7-16 and larger 55 to 5.

Horse Nails—Trade is very steady, particularly the brisk demand being manifest as the result of the feeling that prices will shortly be amended. Our quotations are as follows: C brand, 40, 10, and 7 1-2 per cent.; M.R.M. Co., 55 per cent.; P. B. brand, 55 per cent.

Wire Nails—A good turn over is reported by the wholesale merchants, who are still quoting $2.10 to $2.20 per keg, f.o.b. Montreal.

Cut Nails—Conditions remain as before, with quotations at $2.20 per keg, f.o.b. Montreal.

Horse Shoes—This is among the best selling lines in the whole hardware trade at present. Our prices still are: P.B. New Pattern, base price, $3.50 per 100 lbs., M.R.M. Company latest improved pattern iron shoes, light and medium pattern No 2 and larger, $3.65. No. 1 and smaller, $3.90, snow pattern, No. 2 and larger, $3.90, No. 1 and smaller $4.15. Light steel shoes, No. 2 and larger, $3.90, No 1 and smaller, $4.15; featherweight, all 1 to 4, $6.75. Packing—Up to three sizes in a keg, 10c. per hundred pounds. More than three sizes, 25c.

Sporting Goods—Ammunition is still being shipped in big quantities and rifles are in fair demand. We quote: Canadian made shells, black, 25 and 5 per cent.; smokeless, 25, 10 and 5 per cent.; American centre-fire cartridges, list net; sporting and military, 10 per cent. advance on list; primers, $2.05 per thousand; American loaded shells, 20 per cent. discount; B.B. caps, $2.00 per thousand; standard shot, $6.50 per hundred lbs.; chilled, $7 per hundred lbs.; buck and steel, $7.50 per hundred lbs.; ball, $8 per hundred lbs. We quote discounts 15 per cent. on shot, f.o.b. Montreal, Toronto, Hamilton, London, St. John and Halifax.

Building Paper—Business continues in its normal condition. The local manufacturers and jobbers of building paper are extremely busy shipping orders all over the country. There is no change in prices, which may be seen by consulting our current market quotations.

Cordage—There is nothing new to report in this line. Everything remaining quite active at unchanged prices.

Cement and Firebrick—The approaching close of navigation is giving quite an impetus to trade in this line, as country dealers are anxious to stock up before the winter rates come into force. There is altogether a satisfactory demand for all kinds of cement and firebrick. We quote as follows: $1.80 to $1.90; Belgian, $1.60 to $1.90 per barrel; ex-store, American, $2 to $2.10 ex-cars: Canadian Portland, $2 to $2.05. Firebrick, English and Scotch, $17 to $21, American, $30 to $35; White Bros.' Eng. cement, $1.80 in bags; $2.05 in barrels in round lots.

Coil Chain—We quote: 5-16 inch, $4.25; 3-8 inch, $3.75; 7-16 inch, $3.55; 1-2 inch, $3.35; 9-16 inch, $3.30; 5-8 inch, $3.20; 3-4 inch, $3.05; 7-8 inch, $3; 1 inch, $2.95.

Apple Parers—Business is practically over for the season in this line and sales have been somewhat unsatisfactory, the

demand being small in comparison with other seasons. Our prices are as follows: Little Star, $4.85; Hudson, $5.00; Rocking Table, $5.25; Turn Table, $6; Canadian, $4.50.

Skates—Country dealers who were stocked up at the close of last season are now forwarding their orders in good volume. Large shipments are reported from all the local houses. We still quote: From 25c. to $2.50, according to quality.

Sleigh Bells—This is another line in which the normal activity has been somewhat delayed by the fact that retail dealers in many sections carried over stock from last season. Enquiries, however, are now coming in rapidly and a satisfactory volume of business is being done. We quote prices as follows: Back straps, 30c. to $2.50; body straps, 70c. to $3.50; York Eye bells, common, 70c. to $1.50, pear shape $1.15 to $2; shaft gongs, 20c. to $2.50; Grelots, 35c. to $2; team bells, $1.80 to $5.50; saddle gongs, $1.10 to $2.60.

Horse Blankets—We quote: Jute, unlined $4.50; 3-4 lined $9.50; full lined $12; 16-oz. Hessian, unlined, $6.50; 3-4 lined, $11.50; full lined, $14, and up to $24; Kersey blankets, $9 to $21; all wool, $24, $30, $48 and $60.

Snowshoes—Many dealers who have never before handled this line are now experimenting with it and the orders which are being received by the Montreal jobbers indicate that last season's record turn over may be excelled this year Prices vary from $15 to $35 per dozen pairs, according to quality.

—

Ontario Hardware Markets.

Office of HARDWARE AND METAL,
10 Front street east,
Toronto, November 3, 1905.

INCREASES have been made by several manufacturers who have decided to discontinue price cutting, the lines we have to report advances on being Disston's saws, North Bros.' Yankee Tools and the Stanley Rule and Level Co. planes.

Brisk demand is reported by jobbers, Brisk trade is reported by jobbers, shipments of booked orders for sleigh bells, blankets, girths, halters, cow chains, etc., being very heavy. Building materials are still being called for actively, while axes and handles are having a heavy sale.

While some rifles are still going out the demand is not so great and sorting orders for shotguns, etc., are more in evidence. Skates are a coming line, but it is too soon for much sorting to be done. Cutlery and holiday goods, such as sleds, etc., are in active demand. The cut prices in lawn mowers is also encouraging the booking of large orders for this line.

Axes and Handles—A large trade is being done, the volume increasing steadily.

Cutlery and Silverware—Most dealers have placed their orders for their holiday goods, but many sorting orders are being given and shipments are large.

Sporting Goods—Demand for rifles is decreasing, but shotguns and ammunition are still being called for.

Lawn Mowers—The price cutting prevalent has given an impetus to the placing of orders and all dealers report booked orders very large.

Washing Machines—Trade is very active and dealers report increasing sales.

Chain—Demand for cow chain is very active. Our quotations are: 1-4 inch $6.50, 5-6 inch $4.45; 3-8 inch, $3.85; 7-16 inch, $3.70; 1-2 inch, $3.55; 9-16 inch, $3.45; 5-8 inch, $3.35; 3-4 inch, $3.25.

Extension and Step Ladders—Trade continues active, manufacturers being rushed to make shipments of goods ordered. We quote: Step ladders at 10c. per foot for 3 to 6 feet, and 11c. per foot from 7 to 10 feet ladders. Waggoner extension ladders, 40 per cent. off.

Galvanized Wire— Business is quiet at unchanged prices. We still quote: $2.37 1-2 f.o.b. Cleveland.

What a Little Ad. Will Do.

The selling of your business is an important matter if you have a stock of $10,000; one cent on the dollar means one hundred dollars.

By spending a few cents in Hardware and Metal you may secure a buyer who is willing to pay three or four cents more on the dollar than anyone with whom you are in touch.

Want ads. cost 2c. per word for first insertion, 1c. per word for subsequent insertions.

Barb and Coiled Spring Wire—Trade is dull with quotations the same.

Wire Nails—Demand continues active at unchanged prices.

Cut Nails—A very satisfactory volume of business is reported. Quotations are: $2.40 per keg f.o.b. Toronto.

Horse Nails—Blacksmiths are ordering in large quantities and dealers have no complaints to make.

Horseshoes—Prices continue unchanged with the outlook for business excellent. We quote: "P.B." base, $3.65; "M.R.M. Co., latest improved pattern" Iron shoes, light and medium pattern, No 2 and larger, $3.80; No. 1 and smaller, $4.05; snow No. 2 and larger, $4.05; No. 1 and smaller, $4.30; light steel shoes, No. 2 and larger, $3.95; No. 1 and smaller, $4.20; featherweight, all sizes, 0 to 4, $5.50; toe weight, all sizes, 1 to 4, $6.75. If shipped from factory 15c. less.

Horse Blankets—A large trade is being done in halters, girths, horse blankets and similar goods.

Skates and Sleigh Bells— Merchants are ordering well, particularly for sleigh bells.

Screws—Demand is strong and the market is very firm.

Rivets and Burrs—The possibility of higher prices is giving an impetus to trade. Prices remain as before.

Bolts and Nuts—The high prices of iron has made prices very strong, but no advance has been made as yet.

Cordage—Sorting orders are being received. Our quotations are as follows: Red Cap, 11 1-2c.; Tiger, 10 1-2c.; and Standard, 9 1-2c.; Cordage: manila, 15c.; British manila, 11 1-2c.; sisal, 10 1-2c.; double lathyarn, 10 1-2c.; single lathyarn, 10c.; sashcord, "Hercules," 30c. to 32c.; "Star," 36c. to 38c.; cotton twine, 3-ply, 24c.; 4-ply, 29c.; calking cotton, 16 1-2 to 17c.; cotton waste, colored, 6 3-4c.; white, 11c. to 13c.

Cement—The season's demands have been very heavy and there is little of a surplus on the market. As the bulk of the business is done, however, there is talk of a fall in prices on the higher priced brands. For carload orders f.o.b. Toronto, Canadian Portland, $1.90 to $2; American Portland, $1.90 to $2. For small orders ex warehouse, Canadian Portland, $2.15 to $2.25; American Portland, $2.15 to $2.25.

Firebrick—Business is picking up and prices continue as before. We quote: English and Scotch firebrick, 27c. to 30c.; American low-grade, 22c. to 25c; high-grade, 27 1-2c. to 37 1-2c.

Building Paper—Business is active, the heavy building being done calling for a large quantity of goods. Prices continue firm and unchanged.

Hides, Tallow, Skins and Wool—The local market is gradually settling down to a better basis as foreshadowed in our last report. We are enabled to revise our quotations from one to two points on all hides. This revision is considered to give a better position to the local market as it is now possible to do business on a more equal footing. The American markets have shown considerable strength since our last report and quotations have advanced on the Chicago market from one to two points, a feature which is no small factor, bettering the Canadian market generally as the decline on this market supported by the advance on the U. S. markets removes the possibility of the importation of hides to this side. The feeling generally is that the domestic market will assume a much more healthy character, and with the incoming of the Fall stocks the dealers will be able to fully satisfy all demands at remunerative prices. We quote:

Hides, inspected, No. 1 per lb.	....	0 11½
" " " 2 "	....	0 10½
Country hides, flat, per lb.	0 10	0 10½
Calf skins, No. 1, selected	....	0 13
" " No. 2	....	0 11
Lamb skins, best city slaughter	....	1 05
Horse hides, No. 1	3 00	3 25
Rendered tallow, per lb.	0 04	0 04½
Unwashed wool, per lb.	0 16½	0 17
Wool-washed fleece	0 26	0 27
Rejections	0 20	0 22
Pulled wools, super, per lb.	0 22	0 24
" " extra "	0 24	0 25

Canadian Metal Markets.

QUEBEC.

Office of HARDWARE AND METAL,
232 McGill street,
Montreal, November 3, 1905.

PERHAPS no other week for some time has seen so many price changes in the metal markets as that which has just passed. The activity generally is phenomenal in spite of the extraordinary prices demanded.

Canada Plates have advanced sharply during the week as have also black sheets.

Tin is decidedly firm and we are giving another change in price, in this issue. Recent advices from New York indicate quite a shortage there, which is another circumstance tending to intensify the firmness of this metal.

Pig lead has gone higher again and is considered very cheap at a five cent. advance over last week's prices. The middle of the week saw a slight easing up in the demand for lead, but conditions at time of writing would seem to indicate even higher prices in the near future.

Antimony is some easier again this week but Canadian stocks are so light that it has made no difference in the price as yet.

The lighter weights in galvanized sheets have again advanced to importers. Galvanized iron generally is very firm. Ingot zinc has again gone up on the foreign markets and there seems to be no stop to its advance.

Canada Plates—Further advances are being quoted this week, current prices being: 52's, $2.50; 60's, $2.55; 75's, $2.60; full polished, $3.60; galvanized 52's, $4.00; 60's, $4.25.

Copper—Conditions remain as before. There is still a shortage which makes it difficult to get large quantities. We are quoting: Ingot copper, 17 3-4c.; sheet copper, 24 3-4c.

Ingot Tin—As predicted last week prices have again been advanced. There is a decided shortage in New York, and the natural consequence is that prices locally are held very firm even at the increased figures. We now quote 36 1-2c. to 37c. per pound.

Pig Lead—The upward movement continues and another high water mark was reached this week, when prices were again withdrawn. This metal is considered cheap at from $3.90 to $4.00 per hundred pounds.

Boiler Tubes—We quote: British and American tubes, 1 1-2 inch, 8 1-2c.; 2 inch, 8 1-2c.; 2 1-2 inch, 10c.; 3 inch, 12c.; 3 1-2 inch, 15 1-2c.; 4 inch, 20c.; 5 inch, 45c. Price per foot net.

Pig Iron—Many grades have been advanced again this week. It is impossible to obtain Ayresome, so we have temporarily withdrawn this grade from our price list. Our quotations are:

"Disc," No. 1	$16.50	delivered Montreal.
"Dom.," No. 1	17.50	" "
Usual difference in price for lower grades.		
Ferrona No. 1	$18.00	delivered Montreal.
" No. 2	17.50	" "
" No. 3	16 50	" "
" No. 4	16.00	" "
Londonderry	$18.75 to $19.25	" "

OPEN HEARTH STEEL

Glengarnock	18.25	delivered	Montreal.
Gartsherrie	19.25	"	"
Carnbroe	18.50	"	"
Carron No. 1	21.40	"	"
" (special)	20.40	"	"
Summerlee	20 00 to 20.50	"	"
Clarence No. 1	19.50	"	"
" No. 3	19.00	"	"
No. 1, Cleveland	19.00	"	"

Tool Steel—We quote as follows: Colonial Black Diamond, 8c. to 9c.; Sanderson's, 8c. to 45c., according to grade; Jessop's, 13c.; Jonas & Clover's, 10c. to 20c.; "Air Hardening," 65c. per lb.; Conqueror, 7 1-2c.; Conqueror High Speed steel, 60c.

Merchant Steel—The firmness evident in the iron and steel market generally is reflected in merchant steel as well as in other lines. We are quoting several advances this week: Sleigh shoes, $2.02 1-2, tire, $2.17 1-2; spring, $2.75; toecalk, $2.72 1-2; machinery iron finish, $2.12 1-2; reeled machinery steel, $2.75; mild, $2.02 1-2 and upwards; rivet, $2.02 1-2 and upwards. Net cash 30 days.

Cold Rolled Shafting—We quote: Cold rolled shafting, 3-4 inch to 7-16, $3.75 per 100 lbs.; inch and a half to 3 inch, $3.50 per 100 lbs.

Galvanized Iron— The lighter sheets have again been the subject of an advance to the importers, and the prices as given below are the very best obtainable at the present time. Queen's Head, 28 gauge, $4.10; 26 gauge, $3.85; 22 to 24 gauge, $3.60; 16 to 20 gauge, $3.35; Apollo, 28 gauge, $4; 26 gauge, $3.75; 22 to 24 gauge, $3.75; 16 to 20 gauge, $3.40; Fleur-de-Lis, 28 gauge, $3.85; 26 gauge, $3.60; 22 to 24 gauge, $3.35; 16 to 20 gauge, $3.10; Comet, 28 gauge, $3.85; 26 gauge, $3.60; 22 and 24 gauge, $3.35; 16 to 20 gauge, $3.10; Bell brand, 28 gauge, $4.20 to $4.25; Gorbal's "Best Best," 28 gauge, $4.45; "Windmill Best," 28 gauge, $3.95; Sword and Torch, 28 gauge, $4.05; in less than case lots 25c. extra.

Black Sheets—We are again quoting advances, which are being held firmly, as follows: 28 gauge, $2.25; 26 gauge, $2.20; 22-24 gauge, $2.15; 19-20 gauge, $2.15; 8-10 gauge, 2.30.

Antimony—There has been a slight easing up in the market this week, but not so much as to change prices. It is even yet impossible to buy any large quantities. We still quote 14 1-4 to 14 1-2c. for Cookson's.

Tin Plates—Jobbers are holding the old prices firm, but it is safe to say that they could not replenish stocks at the present time for the same price as they are now selling at. We quote: Cokes, $3.75; Charcoal, $4.

Terne Plates—Our prices are, $6.75.

Ingot Zinc—Prices on foreign markets have again gone up, and everything would seem to indicate a continued activity on this market. We are still quoting: 6 3-4 to 7c.

Sheet Zinc—As is to be expected the market is very firm, the following prices ruling: in casks, 7 1-2c.; sheet, 7 3-4c.

Bar Iron—Another advance has taken place this week. We are now quoting $1.92 1-2 base, f.o.b., Montreal.

Scrap Metal—The rubber situation is about the same as it was last week, but we are quoting a slight advance over last week's prices. Iron remains as before. Cast iron is still in good demand, but the local market for wrought scrap is sluggish. Old lead is considerably firmer this week, and it is very likely that the price will follow the advance in pig lead. Old zinc also is higher in tone, showing an advance of 1-4c. Copper wire, 13 3-4c.; light copper, 12 3-4c.; heavy red brass, 11 1-2c.; yellow brass, 9 1-4c.; light brass, 6 1-2c.; lead, 2 3-4c.; zinc, 3 3-4c.; machinery cast scrap, $13; wrought scrap, $12; stove plate scrap, $9; mixed rags, 75c. to 90c. per 100 lbs.; old rubbers, 7c. to 7 1-4c.

ONTARIO.

Office of HARDWARE AND METAL,
10 Front Street East,
Toronto, November 3, 1905.

GREAT strength in outside markets is reflected in the conditions locally. Exceptional activity is noted also, buying being very heavy at the very high prices demanded by dealers. Tin is especially strong, the active demand giving the metal added strength. Lead is also moving lively, and stocks have been depleted by the large orders placed. Copper is very firm and demand good. In the United States strenuous endeavors are being made to prevent a runaway market.

In old materials iron is increasingly active, and dealers are offering better prices. Old rubbers and rags are also being quoted higher.

Pig Iron—Strong prices are still the rule, advances being made in outside markets. Business is active. We quote:

Middlesboro, f.o.b., Toronto	$22 50
Hamilton, No. 1, at furnace	18 50
" No. 2, "	18 00
Midland, No. 1, "	18 50
" No. 2, "	18 00
Radnor, at furnace	31 00
Londonderry, at furnace	16 50 to 17 00

Bar Iron—The market holds strong and still higher prices are likely. We quote $1.95 base, f.o.b. Toronto, with discount of 2 per cent. net cash.

Tin—There is a strong demand with prices advancing.

Tin Plates— Demand is active with considerable strength shown in prices.

Galvanized Sheets—Further advances are being made in the outside markets, the demand continuing active locally.

Brass— Conditions are unchanged, business being active. Discounts continue at 10 per cent.

Lead—Stocks are light, and despite the high prices demand is quite active. We quote: Pig lead, $4.10 per 100 lbs., and bar lead, $4.80 per 100 lbs.

Zinc Spelter—Trade is brisk and prices quoted are firm. We quote: 7c. per lb. for foreign and 5 1-2 to 5 3-4c. per lb. for domestic.

Copper—There is a good demand at firm prices. We quote: Ingot copper, $17.50 per 100 lbs., and sheet copper, $21.00 per 100 lbs.

Antimony—Increased activity is reported and prices are a trifle stronger.

Old Material—Iron is strengthening, and prices are a shade higher. Demand is brisk. Old rubbers and mixed rags are also stronger. Dealers' buying prices are as follows: Heavy copper and wire, 13c. per lb.; light copper, 12c. per lb.; heavy red brass, 11 1-2c. per lb.; heavy yellow brass, 9c. per lb.; light brass, 7 1-2c. per lb.; tea lead, $2.40 per 100 lbs.; heavy lead, $2.75 per 100 lbs.; scrap zinc, 4c. per lb.; iron, No. 1 wrought, $8 to $8.50, No. 2 wrought, $3 to $5; machinery cast scrap, $13; stove plate, $10; malleable and steel, $5; old rubbers, 6 3-4c. to 7c. per lb.; country mixed rags, 75c. per 100 lbs.

Coal—Possibility of a strike in both the anthracite and soft coal fields is making business active. We quote: Anthracite in cars at bridges, grate, $5.25 per gross ton; egg, stove and nut, $5.50 per gross ton; pea, $3.90 per gross ton.

Standard Hocking, soft coal, in cars, f.o.b. at mines: Lump, $1.35; 3-4 inch, $1.25; run of mine, $1.05; nut, 90c.; N. P. and S., 60c.; slack, 40c.; box cars 10 cents per ton additional.

Youghiogheny soft coal in cars, bonded at the bridges: 1 1-4 inch, $2.45; 3-4 inch, $2.35; mine run, $2.35; slack, $1.80 to $1.90.

For Manitoba, British Columbia and Maritime Provinces markets see pages following.

UNITED STATES METAL MARKETS

Advance proofs furnished HARDWARE AND METAL by The Iron Age, November 2, 1905.

CONTRACTING for material continues on a very liberal scale, for which a good proof is furnished by the fact that the United States Steel Corporation had on its books on October 31 over 6,300,000 tons of orders.

In pig iron, contrary to expectations, a fresh buying movement develops on the heels of the earlier activity. It is understood that the Steel Corporation has taken advantage of the options which it had on November and December iron and has bought about 20,000 tons of pig iron besides. It characterizes the situation that it proved impossible for a large interest to secure from 20,000 to 25,000 tons of metal at Lake Erie furnaces for shipment to Chicago before the close of navigation. There was no spot iron to be had.

In the Pittsburgh district about 30,000 tons of Bessemer and basic pig have been purchased by outside interests, for delivery during the first quarter, a period which the Steel Corporation has not yet considered.

The buying and optioning on the part of the steel interests have created quite a flurry among the malleable iron foundries, who have been rushing into the market east and west. One concern in the Chicago district has bought 9,000 tons of malleable Bessemer and 12,000 tons of charcoal iron. Two melters in Milwaukee have bought 20,000 tons of foundry iron between them, and a string of good sales, aggregating from 20,000 to 25,000 tons, is reported by New York sellers. So far as the southern situation is concerned, it is clear that buyers are getting better accustomed to the

idea of paying $14 for No. 2 foundry at Birmingham, at which the principal sellers are holding.

There has been a further movement in basic pig in the eastern markets. A leading interest in New England has contracted for 40,000 tons for delivery over a long period on a sliding scale, another plant has bought 12,000 tons for delivery during the first half of 1906 at $17.50, delivered, and a steel works connected with a structural mill has added 11,000 tons in two lots to a purchase last week of a 10,000-ton lot. There has been good buying, too, of gray forge.

The rail trade has been rather quiet during the last week. Outside of a lot of 12,500 tons for a coal road there have been only additions to former contracts. Some business for Mexico is pending.

In the structural trade it is of interest to note that next week probably both the new mill at Chicago and the new Clairton mill will be producing. A good part of the tonnage has been sold, however. The most interesting contract of the week is that for 12,000 tons for the new Ohio bridge at Ironton.

In the lighter lines the most noteworthy fact is that the demand for tin plate has continued to develop. It is intimated that prices may be soon up and that this may be done, too, in the case of sheets.

The cast iron pipe trade continues in a very healthy condition. New York is coming out with a very nice order. It calls for about 30,000 tons in addition to the 7,800 tons which are to be let on the 8th.

A pretty large contract for castings has just been awarded to Davis & Thomas for the Steinway tunnel. The exact quantity has not yet been determined, but it will not be less than 15,000 tons and may go very much above that quantity.

LONDON METAL MARKETS.

From Metal Market Report, October 26, 1905.

Pig Iron — Cleveland warrants are quoted at 52s. 7 1-2d, and Glasgow standard warrants at 51s. 10d, making prices as compared with last week 10 1-2d lower for Cleveland warrants and 6d lower for standard warrants.

Tin—Spot tin opened easy at £149 10s., futures at £148 10s., and after sales of 50 tons of spot and 220 tons of futures closed easy at £149 for spot and £148 7s. 6d for futures, making price as compared with last week 5s. higher on spot and 10s. higher on futures.

Copper—Spot copper opened steady at £71 10s., futures £70 10s, and after sales of 150 tons of spot and 250 tons of futures closed steady at £71 10s. for spot and £70 10s. for futures, making price as compared with last week 17s. 6d lower on spot and 12s. 6d lower on futures.

Lead—The market closed at £13 18s. 9d, making price as compared with last week 16s 3d lower.

Spelter—The market closed at £28 5s., making price as compared with last week 10s. lower.

"Metallic" Corrugated Iron is easier to put on than any other make because the sheets are pressed one at a time, not rolled and never vary in shape or accuracy.

This means much to buyers in regions remote from expert roofers and dependent on their own skill.

"Metallic" Corrugated Iron costs no more than the common kind—made either galvanized or painted, straight or curved.

OUR NEW $10,000 CATALOGUE We have just issued the most complete Catalogue ever offered to the Metal Trade. It is a veritable encyclopædia of all that's practical and beautiful in the Art Manipulation of Sheet Metal. Book contains 440 pages, superbly bound and illustrated. We send it free upon request, to any builder, contractor or dealer of responsibility.

409

MINES AND METALS.

NEGOTIATIONS have been concluded for the lease of the Lake Superior Corporation's new copper plant at Sault Ste. Marie, Ont., to the Canadian Nickle Co., a new concern organized for the purpose of refining copper and nickle by electricity. The preliminary arrangements for the installation of the new process have been made, and within a few months it is expected the first plant in the world by which nickle will be refined by electricity will be in operation at the Canadian Soo.

* * *

It has often been suspected that the iron for which Bell Island is now famous has an outcropping on both sides of Conception Bay and this theory has been practically demonstrated within the past two weeks. Accidentally the discovery of a big deposit of splendid iron ore was made by the men near Clarke's Beach. They secured samples and staked out a claim. The samples were submitted to experts on Bell Island and pronounced to be richer than the ore mined there. The affair has been kept secret, but it looks as if on the mainland of the bay there will be a big iron mining boom next Summer.

* * *

A mining prospector who has returned from Bancroft, North Hastings, is optimistic over his discovery of what he believes to be a fine grade of lithographic stone, a material which has hitherto been found only in Germany. The prospector brought a number of specimens, and within a few days they will be sawn, polished and tested by a local lithographic concern. The stone is somewhat darker in color than the German stone, but is of close texture and free from crystal. Should the stone prove to have a commercial value there are 500,000 tons in sight. Other valuable mineral deposits have also been found in the vicinity of Bancroft, including corundum, iron, dark mica, and white marble.

German iron founders are seriously troubled over the competition of blast furnaces which are making castings direct from the furnace. It appears that technically an increasing number of blast furnaces are making a success of direct casting and are invading the markets of their customers for pig iron. The founders are talking of boycotting the guilty iron makers, and are discussing also the plan of getting together to build their own blast furnaces and retaliating.

* * *

The Cariboo Hydraulic Company's mine at Bullion, B.C., has been sold for about $1,000,000 to a New York syndicate.

* * *

It is said that representatives of American and German combinations are endeavoring to secure control of the zinc deposits in British Columbia.

* * *

The C.P.R. has influenced the smelting of Le Roi ores at Trail and this will probably force the smelter at Northport, Wash., to close down.

* * *

According to a recent Government report the Canadian mica fields are amongst the richest in the world. The best deposits so far discovered are those of the Saguenay district, situated at the lower St. Lawrence River below Quebec. Besides these there are deposits to the north of Ottawa, in the vicinity of Mattawa, at several places in Ontario, and recently discovered in British Columbia. There have been instances in the Ottawa valley, in the township of Wakefield, where crystals measuring from four to six inches across the basal planes have been found in small dikes, but they occur so sparingly that profitable mining cannot be pursued.

* * *

Large gatherings of miners have been held in various parts of Ontario to consider proposed changes to the Ontario mining laws. A Provincial convention will be held in Toronto this month.

G. F. STEPHENS & CO.
LIMITED
WINNIPEG, CANADA

Hardware and Metal Conditions in Manitoba.

(Market quotations corrected by telegraph up to 12 a.m. Friday, Nov. 3, 1905.)

Office of HARDWARE AND METAL
Room 511, Union Bank Building,
Winnipeg, Man.

A NUMBER of changes will be noted this week in the prices quoted below and in every instance the change has been an advance. Business is usually brisk on a rising market and the present state of trade in the west affords no exception to the general rule. Heavy goods are in particularly brisk demand at the present time and they are being brought to Winnipeg and to the warehouses at the lake ports in large quantities before the close of navigation.

Collections are reported to have improved greatly in all parts of the west during the last month and the wholesale trade confidently expect the big crop to enable the trade to start the new year with a clean sheet.

Game Traps—There is a brisk demand now for game traps and prices are quoted as follows:

H. & N., discount	50 and 5 p.c.
Victor, "	66⅔ p.c.
Newhouse, "	35 p.c.
Bear	$7 each

Lanterns—The retail trade is suffering severely from cut throat department store competition. Wholesale prices hold steady and are still quoted as follows:

Cold blast lanterns	$4 75 per doz.
Coppered cold blast lanterns	6 75 "
Cold blast dash "	7 25 "
Lift Lanterns	4 25 "

Wire—Prices are steady since the changes a few weeks ago. We quote:

Barbed wire, 100 lb		$3 00
Plain galvanized	6 to 8	3 39
"	9	2 50 2,90
Plain galvanized	10	3 50
"	12	3 10
"	13	3 20
"	14	3 90
"	15	4 45
"	16	4 60
Plain twist		3 00
Staples		3 50
Oiled annealed wire	10	2 96
"	11	3 02
"	12	3 10
"	13	3 20
Oiled annealed wire	14	3 30
	15	3 45

Annealed wires (unoiled) 10c. less.

Horseshoes—Iron shoes have been advanced 10c. and steel shoes 15c. Prices are now quoted as follows:

Horseshoes, iron, No. 0 to No 1	$4 65
No. 2 and larger	4 40
Snow shoes, No. 0 to No. 1	4 90
No. 2 and larger	4 65
Steel, No. 0 to No. 1	4 90
No. 2 and larger	4 65

Horsenails—Discounts are as follows: "C" brand, 40, 10 and 7 1-2 per cent., "M" brand and other brands, 55 and 60 per cent. Add 15c. per box.

Wire Nails—Immense quantities of wire nails are being hurried in before the close of navgation. The price has been steady since the decline to $2.60 per keg.

Cut Nails—Price, $3.00 per keg, base price. None selling because of the low price of wire nails.

Screws—No change in price. Demand continues brisk at following unchanged discounts:

Screws, flat head, iron, bright	85 and 10 p c.
Round " "	80 p.c.
Flat " brass	75 and 10 p.c
Round " "	70 and 10 p.c.
Coach	70 p.c.

Nuts and Bolts—Discounts are unchanged. We quote:

Bolts, carriage, ⅜ or smaller	60 and 5 p.c.
" 7-16 and up	55 p.c.
Bolts, machine, ¾ and under	55 and 5 p.c.
" 7-16 and over	55 p.c.
Bolts, tire	65 p.c.
Bolt ends	55 p.c.
Sleigh shoe bolts	65 and 10 p.c.
Machine screws	70 p.c.
Plough bolts	55 p.c.
Square nuts, case lots	3c. discount.
" " small lots	2½c. "
Hex " case lots	3c. "
" " smaller lots	2½c. "

Rivets—Discounts continue as follows:

Rivets, iron	60 and 10 p.c.
Copper, No. 8	29½
" No. 12	33

Coil Chain—Unchanged in price. We quote:

Coil chain, 3-16 inch	9.25
" ¼ inch	7.20
" 5-16 inch	5.20
" ⅜ inch	4.60
" 7-16 inch	4.45

81 to 85 "	12.60
86 to 90 "	14.75
16 to 95 "	17.30
6 to 100 "	

Nova Scotia Trade News

Halifax, N.S., Nov. 1.

METAL markets are very unsteady at present. Prices continue to advance. Since last report another advance has been made in the price of bar iron, which is now quoted at $2.25 base from store. This makes the third advance by the mills in the last fortnight, the total increase being fifteen cents. The price of all metals is very firm. Though the price of black sheet iron has not changed within the past week, dealers expect that it will go up before very long. They are also looking for an increase in the price of tin. All metals are finding ready sale at the prices quoted. Dealers in tinware and stoves are using large quantities of metal this season, particularly sheet iron.

Dealers have have no complaint to make regarding trade. A good general business is being done right through. Substantial orders are coming in from the jobbers who are buying Fall goods. The lumbermen continue to place good orders, and the mining trade promises well, some good sales being made in several sections of the Province. Dealers here do not think the absorption of the Maritime Nail Works at St. John, N. B., by the Capewell Horse Shoe Nail Co., of Hartford, Conn., will change the aspect of the trade very much in the Maritime Provinces. It has been stated that the American company will make an effort to capture the trade of the Lower Provinces, but in what way they intend to do it remains to be seen. At the present time the Maritime Company does very little business in these Provinces. Prices now are about as low as ever they will be, wire nails being quoted at 30 cents less than cost, which fact is something out of the ordinary in the nail trade. Dealers report collections satisfactory.

Arrangements have practically been completed for the installation of a demonstrating plant in connection with the Sydney Cement Works, the object of which is to show the treatment of slag according to the Passo process. Dr. A. Golz and R. M. Bertram are in Sydney in connection with the experiment. Dr. Golz is a cement expert from Haiger, Germany, and Mr. Bertram is the managing director of the Canadian Passo Cement Co., of Toronto. At present the slag is granulated by means of water treatment, but the Passo method is by an air blast, which it is claimed produces better results. It is stated that after three years' experimenting, the German Government has adopted the slag cement made by the Passo process,

and has classed the product with Portland cement. Dr. Golz, who is to conduct the proposed demonstration, was a collaborator of Dr. Passan, the inventor of what is called in this country the Passo process of granulating slag.

—

British Columbia Trade News

Vancouver, Oct. 27, 1905.

QUESTIONS of transportation and freight rates, affecting very materially the future of the coast cities, and especially of Vancouver as a centre of jobbing trade, occupy the centre of the stage in the public attention at the present moment. The delegation sent east to confer with the Canadian Manufacturers' Association has not yet returned, but the result of the discussion with the council of the association has been telegraphed, and it is that the manufacturers' association sticks to its original recommendation respecting mixed car lots, and the restoration of "old rule No. 2" by the C.P.R.

The other matter of importance, and on which the whole business community is getting worked up, is the reduction in freight rates from the east to Edmonton, by which the coast wholesale merchants are shut out of the territory in which they have sought so long to gain a field of legitimate trade. The matter is being fully discussed, and strong representations have been made personally and by letter. The Board of Trade of Vancouver takes the ground that the interests of the C.P.R. lie not in handicapping the wholesale trade of Vancouver, but in fostering it. Further, that from its geographical position this city is right in claiming recognition as a terminal wholesale point. The co-operation of the Boards of Trade of Victoria and New Westminster is sought in pressing the matter.

* * *

Lumber prices were raised $1 per thousand all round, beginning with this week. This was a result of the visit to the coast of a number of the mill men from the interior of the Province, members of the Mountain Lumbermen's Association. The mountain mills are necessarily limited in their local trade, and have no chance to ship foreign, so that they are confined to the Manitoba and Northwest trade. Some time ago the coast mills cut the price of rough lumber into the middle west down to $1(per thousand and, of course, other reductions followed. Many of the mountain mills closed down, as they could not stand the competition and price-cutting. Now that an arrangement has been reached, these mills will be able to resume.

* * *

The new lumber tariff classification to be put in effect as a result of orders issued by the Railway Commission, and which was arrived at by compromise between the railway company and the lumbermen, is to go into effect on Nov. 1st. The mutual agreement was reached through the meeting which the Railway Commission suggested as an alternative to having them make an order. The new tariff, which is already published, gives a reduction on rough cedar from 50c. to 40c. per hundred lbs. to Manitoba points. The fir rate to Fort William is also to be 40c. in future, instead of 50c., as in the past. Mixed cars of fir, cedar and shingles are to be allowed at respective car rates, the minimum to be on fir basis.

* * *

The city of Vancouver faces the necessity of immediate sewer construction to an amount totalling $300,000, for which funds will have to be provided. In addition, the proposed improvement of the water system by extending the mains and installing a high-level service, will cost half a million. On this City Engineer Clements (late of Toronto city engineer's staff) is now preparing his report. Both works are needed, and will very likely be submitted to the vote of the ratepayers at the civic elections in January.

* * *

Bright dry weather has been favoring the work of re-paving the asphalt streets of the city, the contract for which is now being carried out. If the rainy season holds off for a few weeks longer the work will be finished and the streets put in excellent condition. It is some years since the first asphalt was laid, and it was not a success. The present work has been undertaken to get rid of the constant repair of the old surface, and an entirely new coat of asphalt has been laid.

* * *

The Blue Funnel steamer Jason, with over 1,000 tons of freight from Liverpool for this port and Victoria, reached the coast on the 23rd. Her cargo for here was mainly steel, iron, and similar manufactures. The Tydeus, the next steamer of the same line to arrive, has as much cargo for B. C. ports as the Jason. A little later on the Bellerophon, a monster new Blue Funnel steamer, is due to arrive from the Old Country. Large as some of the Holt steamers are, this new vessel is very much larger. She is one of four monster cargo steamers being added to the Holt line.

* * *

The sale of the great Cariboo Consolidated Mining Co.'s properties to a New York syndicate, headed by the Guggenheim's, is reported this week by Mr. J. B. Hobson, the general manager and engineer, by whose efforts, chiefly, such a large sum of money has been expended in developing the property. An enormous amount of work has been done, and a considerable quantity of gold recovered, but it cannot be said that the property has ever paid. As a matter of fact, the demonstration of the values in the rich alluvial deposits by the work already done brought the management up to the position that more money had to be spent to get a large enough permanent supply of water. This has been made possible by the sale, which is reported to be for a million dollars. A seventeen-mile canal will tap Cariboo Lake and bring abundance of water for hydraulic operations.

* * *

Latest reports from Atlin, at the hands of well posted men who have been in all summer, express great satisfaction with the results on McKee Creek, Spruce Creek and others in the Atlin camp. Machinery has been used more extensively and in some cases good results with a steam shovel have been achieved.

* * *

An interesting visitor to the coast this week was Major Joly de Lotbiniere, son of Lieut.-Governor Sir Henri Joly de Lotbiniere. Major Joly is one of the foremost English engineers and is intrusted by the Government of India with the perfecting of plans for a colossal irrigation and power scheme which is intended to convey water for irrigating a large section of arable lands in Kashmir, and to generate over 100,000 horsepower for manufacturing purposes.

While here Major Joly inspected the plant of the Vancouver Power Co., and he has also seen the other coast water powers from here to California. He has been engaged in seeing the machinery of various kinds adapted to the work he has undertaken and when he reaches England, whence he is proceeding now by way of Eastern Canada and the States, he will make his final reports. The machinery is to be purchased for very large electrical development and also for the water power plant entirely on the recommendation of Major Joly, who is making the present tour largely for the purpose of inspection.

* * *

Messrs. Maclure, of Matsqui, on the Fraser River, who have been developing a deposit of clay for making pressed brick, tile, etc., have been joined in the enterprise by Messrs. W. H. Armstrong and A. Morrison, two well-known local contractors who have had considerable experience in handling building material. The head office and stock warehouses will be in Vancouver, though the plant is situated at Matsqui, near Mission Junction, 40 miles up the Fraser River.

The clay is of such fine quality that anything which can be made of fire clay can be made from this deposit. Vitrified tile and brick, paving brick, pottery, sewer tile, as well as pressed brick will be manufactured. Heretofore the fire brick used in the Province, mainly at the coking ovens of various mines, has come from the Old Country by steamer and sailing ship. The pressed brick has come from the United States.

* * *

Another growing industry is that of the Vancouver Portland Cement Co., near Victoria. This plant has been running less than a year but such is the demand for the product that plans are now being gotten out by Mr. R. P. Butchart, the managing director, for an addition which will double the initial capacity. The cement is used in this city and is shipped up-country in large quantities. Mr. Butchart has about completed arrangements for establishing a similar plant at Kananaskis, west of Calgary, where deposits of suitable material have been located.

The completed plant will have the daily capacity of 1,200 barrels, by far the largest plant of the kind on the coast. The proposed plant near Calgary, in which a number of prominent Calgary people are interested, will cost $300,000. It will be known as the Alberta Portland Cement Co. Mr. R. P. Butchart, managing director, and the moving spirit in both projects, is well known in Eastern Canada, where he for a long time managed the Shallow Lake plant, which he still controls.

PAINT, OIL AND BRUSH TRADES

SHERWIN-WILLIAMS CO.'S ANNUAL CONVENTION

FOR the twenty-fifth time the salesmen and managers of the Sherwin-Williams Paint Co. were the guests of the firm this week for their annual convention. It has been customary to hold this convention at the company's head office, Cleveland, Ohio, but this year a departure was made and the splendid new plant at Montreal was the scene of the gathering.

On Sunday a special train brought the western representatives to Montreal and they were immediately taken to the Windsor Hotel, where a monster electric sign outlined the words: "25th Annual Convention, Sherwin-Williams Paint Co., largest paint and varnish makers in the World."

The convention was held in the spacious storage room of the works on Centre street and the boys were on hand good and early, having been taken out on a special car. And a jolly crowd they were. The time preceding the formal opening of the convention was enlivened by singing some clever parodies on such well known songs as "The Shade of the Old Apple Tree," and "The Good Old Summer Time," interspersed with yells from the various divisions. The most successful effort in this direction came from the far western representatives who created much merriment by suddenly shouting out:

"Pacific Division 'way out West,
The tail of the fish is always the best."

On the appearance of Mr. Sherwin, president of the company, Mr. Walter H. Cottingham, vice-president and general manager, and Mr. C. C. Ballantyne, manager of the Canadian Division, the boys rose to their feet and gave the gentlemen named a reception which amply attested their popularity.

Mr. W. H. Cottingham, general manager, took the chair, and called the meeting to order after which Mr. Davis, secretary of the committee was asked to call the roll. It was found that the representatives present altogether included about two hundred persons.

Mr. Cottingham then arose to give the opening address, referring to the convention as another milestone on the march because, being held in Montreal, it recalled his own early business career and man always looks back with greatest pleasure to his first hard struggles and the manner in which he overcame them. The present convention was noteworthy, first, because it was the twenty-fifth convention of the company; and second, because it marked the tenth anniversary of the beginning to manufacture Sherwin-Williams paints in Canada. Mr. Cottingham then proceeded to review the history of the firm's Canadian business from the establishment of the Walter H. Cottingham Co., in a very small way, eighteen years ago, to the amalgamation of that concern with the Sherwin-Williams Paint Co., and finally to the present splendid Canadian business, which is supplied by the Montreal plant—one of the most complete in the possession of the company. Mr. Cottingham exhibited to the convention the first "Day Book" of the Walter H. Cottingham Co. (an ordinary pass book) and created much amusement in explaining how he avoided the necessity of a ledger by simply blue-pencilling the accounts when paid. Much of the credit for this marvellous development was due to good advertising and the loyalty of the company's salesmen. The general manager closed his remarks with a few words of welcome to the "new men," of whom there were several present, and then called upon the president, Mr. Sherwin.

Mr. Sherwin, who was most enthusiastically received, began by paying a tribute to the Canadian representatives who had built up a business which required such a large and complete plant to produce the goods demanded. In fact, he was sure the Canadian people were proud of this plant. He was pleased to make the acquaintance of so many new representatives and he was forcibly reminded of the great change which had come about in salesmanship during the years he had been in business. Formerly the best talker and the one who could tell the newest and funniest stories (not always of a Sunday school variety, either) was the best salesman. But salesmanship has got down to a science and no man can now sell goods unless he knows them thoroughly. The object of the convention was to instruct "the boys" in this way and to give them a feeling of strength and assurance, which would be irresistible throughout the year to come.

PAINT AND OIL MARKETS

QUEBEC.

Office of HARDWARE AND METAL,
232 McGill Street,
Montreal, November 3, 1905.

THERE is but little in the business of the past week to distinguish it from others and trade on the whole has been satisfactory.

Indications are that the upward movement of turpentine will be renewed before the end of the week, as a decided shortage in the southern crop was reported, thus making it difficult for local merchants to supply stocks at the price given.

Linseed oil is commanding rather unusual attention just now and the market is firming up. The English market is very strong and is advancing right along, so that if prices have not been advanced in Canada they will at all events be held much more firmly.

Absolutely no changes in prices have occurred during the week, steadiness being the feature of the trade.

Turpentine—Present indications point to another advance in prices which will possibly occur before the end of the week. In the meantime we quote: Single barrel, 98c. per gallon. Two barrels or over, 97c. For smaller quantities than gallons, 5c. extra per barrel is charged. Standard gallon is 8.40 lbs. f.o.b. point of shipment, net 30 days.

Linseed Oil—The great activity in English markets is having an effect upon prices in Canada. They are much firmer in consequence. Our prices are: Raw, one to four barrels, 45c. five to nine barrels, 44c.; boiled, one to four barrels, 48c.; five to nine barrels, 47c., f.o.b. Montreal. Net 30 days.

Ground White Lead—We quote: Best brands Government standards, $5.50 to $5.65; No. 1, $5.25 to $5.40; No. 2, $4.90 to $5.15; No. 3, $4.65 to $4.90, all f.o.b. Montreal.

Dry White Lead—We quote: Barrels, $5.25; 100 lb. packages, $5.50; 6 or 10 lb. tins, $6.50.

Dry White Zinc—In spite of the advance in the primary markets this line is being held steady by Canadian manufacturers and jobbers. The explanation is that being stocked up until next spring the majority of them are not following the market, but are basing quotations on their own cost price. We quote the following prices: Pure dry in casks, 7c.; in 100-lb. kegs, 7 1-2c.; No. 1 zinc, in casks, 6c.; in 100-lb. kegs, 6 1-2c.

White Zinc—(Ground in oil) — We give the following prices: 25-lb. irons, 7 1-2c. to 10c.; No. 1, 6 1-4c.; No. 2, 5 1-4c.

Putty—We quote: Pure linseed oil, $1.75 to $1.85; bulk in barrels, $1.50; in 25-lb. irons, $1.80; in tins, $1.90; bladdered putty in barrels, $1.75.

Orange Mineral—We give the following prices: Casks, 7 1-4c.; 100 lb. kegs, 7 1-2c.; smaller quantities, 8 1-2c.

Red Lead—Prices are unchanged being still as follows: Genuine red lead in casks $4.50; in 100-lb. kegs $4.75; in less quantities at the rate of $5.75 per 100 lbs.; No. 1 red lead, casks, $4.25; kegs, $4.75, and smaller quantities, $5.50.

Gum Shellac — This is unchanged. Prices generally quoted being: Fine orange, 55c. per lb.; med. orange, 50c. per lb.; bleached shellac (white), 60c. per lb.

Shellac Varnish—Our quotations are as follows: Pure white in barrels, $2.50 to $2.60; pure orange, $2.40 to $2.50; No. 1 orange, $2.35 to $2.45.

Mixed Paints—We are still quoting from $1.20 to $1.40 per gallon.

Castor Oil—Foreign producers have again advanced prices to importers, but we are authorized to quote from 7 1-2c. to 8 1-2c., according to lot.

Refined Petroleum—The condition of the market remains the same as at our last report and the rush of business continues. Prices have not been amended so far on the Canadian market and we still quote: American water white, 16 1-2c to 17c.; Canadian prime white, 14 1-2c.; 18 1-2c. ex warehouse.

ONTARIO.

Office of HARDWARE AND METAL,
10 Front Street East,
Toronto, November 3, 1905.

CANADIAN crushers of linseed oil have advanced their prices to jobbers and as the market in England is gaining strength it is certain that an early advance will be made in our listed figures. Turpentine continues very strong and some are predicting another advance owing to firmer conditions in the south. There is very little turpentine on the local market so that the market is subject to change.

Paint business continues very satisfactory for this season, a great deal of white lead being on the move.

White Lead—Ex Toronto, pure white, $5.55; No. 1, $5.12 1-2; No. 2, $4.75; No. 3, $4.00; No. 4, $4.25 in packages of 25 lbs. and upwards; 1-2c. per lb. extra will be charged for 12 12 lb. packages; genuine dry white lead, in casks, $5.00.

Red Lead—Genuine in casks of 560 lbs., $4.75, ditto, in kegs of 100 lbs., $5.00; No. 1, in casks of 500 lbs., $4.50; ditto, in kegs of 100 lbs., $4.75.

White Zinc—Genuine V. M., in casks, $6.50, in 25 lbs. $7.50, in 12 1-2 lbs.

SPECIAL
TO THE
TRADE

We do not offer any Paints other than what we manufacture ourselves. The great development of the Carriage Building Industry in the Dominion has stimulated a demand for the finest description of ground colors. That is to say, colors ground in Oil, ground in Japan and ground in Varnish. This business is a specialty of ours, and the bulk of the consumption in the Dominion is the product of our Factories. The making of Fine Coach and Car Colors in every form is a distinct branch with us, employing expert makers and finishers and testing with our own painting staff.

The appliances are modern and an abundant completed stock is carried at our factories and warehouses in Montreal and Toronto.

THE
CANADA PAINT
COMPANY
Limited

$8.00; Lehigh, in casks, $5.50, in 25 lbs. $6.00, in 12 1-2 lbs $6.50.

Shingle Stain—In 5-gallon lots 57 to 90c. per gallon.

Paris White—90c. to $1 per 100 lbs.

Whiting—60 to 65c. per 100 lbs.; Gilders' whiting, 75c.

Shellac Varnish — Pure orange in barrels, $2.80; white, $2.90 per barrel; No. 1 (orange), $2.25.

Linseed Oil—Our quotations are: Raw, 1 to 4 barrels, 47c.; boiled, 50c.; 5 to 9 barrels, raw, 46c.; boiled, 49c.; Toronto, Hamilton, London and Guelph, net 30 days. Advance of 2c. for delivery to outside points.

Turpentine—Single barrel lots, $1; 5 gallon lots, $1.10 f.o.b. point of shipment, net thirty days. For less quantities than barrels. 5c. per gallon extra will be added, and for 5 gallon packages, 50c., and 10 gallon packages 80c. will be charged.

Glues—Broken sheet, in 200 lb. barrels, 5 to 25c. per lb.; cabinet glue, in barrels, 11 1-2 to 12c.; emery glue, in barrels, 15c.; bookbinders' ground, 11 1-2c.; finest American white, 19c.; No. 1 American white, 15c. per lb.

Putty—Ordinary, bladders in barrels. $1.65 to $1.75; pure linseed oil, $2 to $2.10; bulk in barrels, $1.50; pure, $1.95 to $2; 100-lb. kegs 25c extra.

Plaster Paris—New Brunswick, $2 per barrel.

Liquid Paints—Pure, $1.20 to $1.35 per gallon; No. 1, $1.10 per gallon.

Barn Paints—70c. to 80c.

Bridge Paints—75c. to $1.

Castor Oil—English, in cases, 8 1-2 to 9c. per lb., and 10c. for single tins.

Refined Petroleum—Shipments to the north and west are very large and will continue until the close of navigation. Water white, American water white, 16 1-2c. to 16c.; Canadian prime white, 14 1-2c; 18 1-2c. ex warehouse.

Crude Petroleum—An advance of 2c. has been made on crude petroleum, the rise holding good on all lines. We quote: Pennsylvania, $1.61; Ohio, 94c.; Canadian, $1.34.

MONTREAL WINDOW GLASS.

The Montreal jobbers are considering the advisability of again advancing prices as it is agreed that there will be practically no further arrivals during the present season. For some weeks they have been hoping that sufficient quantities would come in after all, but this has now been abandoned and the feeling is very much more pessimistic. While awaiting increase in prices jobbers meanwhile are holding the old prices firm. We are quoting: First break, 50 ft., $2.10; second break, $2.20; first break, 100 feet, $4; second break, 100 feet, $4.25; third break, 100 feet, $4.75; fourth break, 100 feet, $5; fifth break, 100 feet, $5.25; sixth break, 100 feet, $5.75; seventh break, 100 feeth, $6.25; and eighth break, 100 feet, $6.50. Diamond star, first break, 50 feet, $2.30; second break, 50 feet, $2.50; first break, 100 feet, $4.40; second do., $4.80; third do., $5.75; fourth do., $6.50; fifth do., $7.50; sixth do., $8, and seventh do., $9. Double thick, first break, 50 feet, $3.45; second do., $3.75; first break, 100 feet, $6.75; second do., $7.25; third do., $8.75; fourth do., $10; fifth do., $11.50; sixth do., $12.50; seventh do., $14; eighth do., $16.50; ninth do., $18; tenth do., $20, eleventh do., $24, and twelfth do., $28.50.

SHERWIN-WILLIAMS CONVENTION

(*Continued from pape 48*)

Mr. Ballantyne, the Canadian manager, was then called upon and after returning thanks for the applause which his name called forth, he extended a welcome to the representatives on behalf of the Canadian Division. He was glad they appreciated the growth of this branch of the business and, though it was hard work at first, success was finally attained through judicious advertising and an excellent traveling staff. He paid a glowing tribute to Mr. Cottingham and in closing called upon Mr. "Bob" Johnston, one of the "Old Guard," to read an illuminated address to Mr. Cottingham. The general manager, in reply, expressed his appreciation of this splendid token of regard and said that he would rather possess the good-will of the Sherwin-Williams staff than any other honor in the world.

The results of the "top-notch" competition were then announced, showing that the Southwest Division had again captured the beautiful bronze trophy, while the district manager, Mr. Myers, received the top-notch fob and a cheque for five hundred dollars. The Canadian Division came second, the "top-notch" salesman of this division being Mr. "Joe" Auger, Montreal.

After the various "top-notch" presentations had been made an extension of this system of premiums was announced to take effect during the coming year, amid vociferous applause.

A ten-minute intermission was followed by a tour of the works in a number of squads, each under the leadership of a manager or superintendent. On all sides the greatest admiration was expressed for the completeness and cleanliness of the works.

This brought the opening ceremonies to an end and the convention was for the remainder of the week given over to business discussion, Friday afternoon being devoted to papers on promoting, advertising and salesmanship.

On Friday evening occurred the annual banquet of the company at the Windsor Hotel. After ample justice had been done to the menu, some excellent speeches were made by the officers of the company and Mayor Laporte, Hon. R. Prefontaine and F. D. Monk, M.P. The 25th annual convention was then over, and the race for next year's "top-notch" prizes had begun.

BILLING'S TOWELS.

Can any reader of Hardware and Metal advise us where Billing's Trowels can be procured. We have an inquiry for this line and it is not known on the local market.

ELECTRIC TRACTION FOR RAILROAD SERVICE.

AT a recent meeting of the Canadian Railway Club held in the Windsor Hotel, Montreal, Mr. J. A. Shaw, the assistant electric engineer of the Canadian Pacific Railway Company, gave a valuable paper on the above subject.

Mr. Evans, of the Canada Paint Company, made a few remarks which will particularly be of interest and be appreciated by travelers who use the Sarnia tunnel.

As an observer traveling over the country for the last 25 or 30 years, on railroads operated by steam, electricity and otherwise, Mr. Evans expressed the opinion that the power required to move the heavy freight trains, such as one may see upon the Grand Trunk, Canadian Pacific or Intercolonial, would be so great and require such an immense voltage that the operation would be very expensive.

He had traveled on electric roads in Switzerland and was not sure what system they use, but they seemed to have supplementary stations or auxiliary feeders wherever there was a waterfall. The cars were clean, the trains were frequent and they seemed to be extremely popular. The greatest change, however, was in Liverpool and Birkenhead in the Mersey River tunnel. For years they had difficulty with gases (sulphuretted hydrogen) from the engines collecting in the tunnel, until the people hesitated about going through the tunnel. On one occasion when Mr. Evans was a passenger, a train was held in the tunnel for some time waiting a chance to get into the station, and the people got extremely nervous on account of the bad air and the "creepy" feeling which comes over one when you know there is only an "envelope" between you and a deep river. The road soon became unpopular and was going into bankruptcy, when they got some strong company to take their bonds and convert it to electricity.

"If this electrical system were put into operation in the Sarnia tunnel it would lead to a great deal of confidence with the traveling public," said Mr. Evans. "People become very nervous when they know they are going to enter the tunnel, far more so than in the olden days when they crossed the ferry at Point Edward and Fort Gratiot, and for this reason I hazard the opinion that the money would be well spent if an electric locomotive were employed to draw the trains through the Sarnia and Port Huron tunnel. The London underground railways have become extremely popular since electric traction was adopted.

"We can not take the Montreal street railway as a criterion of what a well ballasted long distance railway would be. The Montreal street railway had to lay their tracks at first on the old car lines, and take a street as they could find it, perhaps with a porous 'spongy' foundation, but when they have completed laying their new rails, as they are now doing, building from 'hard pan' upwards, they should run very smoothly. The objectionable 'jerking' when starting could easily be overcome by regulating the lever so that power could go on gradually; any clever mechanic could devise a contrivance to overcome this fault.

"Regarding the question of snow removal, it is only a question of power, and if you can drive a snow plough with steam, you can drive it with electricity, and where you can take a locomotive you can take an electric plough. Perhaps you would have to run over the road more frequently, but that could be easily got over. The whole essence of the paper, however, is, 'which would be cheaper and most efficacious?'

"The prediction of Mr. Westinghouse that at no very distant time the electric locomotive will supersede the steam locomotive may prove true, but I am sure we will all part with the old war horse steam engine with a great deal of regret, because undoubtedly it has been a valuable and efficient servant, whose services we cannot well afford to dispense with in a hurry." (Applause.)

INDUSTRIAL GOSSIP

HARDWARE AND METAL would be pleased to receive from any authoritative source industrial news of any sort, the formation or incorporation of companies, establishment or enlargement of mills, factories, foundries or other works, railway or mining news. All correspondence will be treated as confidential when desired.

THE American Window Glass Machine Co. expect to employ 400 hands in their new factory at Cayuga.

The Standard Wire Fence Co. are to erect a new factory in Woodstock, Ont.

The Northwest Machinery & Iron Co., Winnipeg, have assigned to John W. Lord.

The big plant of the Canada Car Co., at Montreal, has commenced operations.

The Winnipeg Rubber Co. have decided to erect a large warehouse in Calgary.

Welsh coal exporters are hoping to establish a trade with Canada in anthracite coal.

The Canadian Rand Drill Co. are contemplating a large addition to their plant at Sherbrooke, Que.

Work has been commenced on the new thread factory being erected in Stratford by Dr. Beattie Nesbitt.

Maritime Engineering Co., Moncton, have been installing machinery in the new saw mill erected by the A. L. Wright Co., at Salisbury, N.B.

The Mutual Binder Twine factory at Brandon, Man., has been sold for $15,700. The plant originally cost $65,000, and the new owners will continue to use it in making binder twine.

A company has been formed to establish a large power generating plant on the Thames River about eight miles from London, Ont. J. M. McEvoy is one of the promoters of the company.

Port Arthur has voted to expend $112,000 to improve its water system, $110,000 for a sewerage system, $10,000 for a new fire hall, and $18,000 to extend the municipal telephone system.

The Dominion Iron & Steel Co. are considering improvements for enlarging the output of the open hearth steel department—that is, the supplementing of modern machinery to improve the tonnage.

The operation of the street railway, electric light and gas franchises at Cornwall has been taken over by the Sun Life. A new office is being built for them in Cornwall by J. B. Atchison & Co.

The Rideau Mfg. Co., Ottawa, are erecting a large factory, in which they will employ four hundred to five hundred hands in making ladies' clothing. The company have a branch office in Winnipeg.

It is proposed to establish a veneer mill at St. John. N.B., for handling the woods grown on the property of the Chemalpa Land Co. of Mexico. G. W. Fowler, M.P., is the president of the company.

A company has been organized at Fort William, to be known as the Northern Engineering Construction, Heating & Supply Co., capitalized at $100,000, and a large foundry will be constructed. W. J. Ross and John Crearer are interested in the company.

A 7,000-ton steamer is now being constructed in England for the ore-carrying trade of the Dominion Iron & Steel Co. She is being built by Wilhelm Wilhelmson, of Tonsberg, Norway, and is expected to arrive in Sydney at the opening of navigation, next Spring.

Work on the building of the extension of the Niagara, St. Catharines & Toronto Railway from Falls View to Montrose has been commenced. This extension will form the connecting link between the N., S. & T. system and the projected Toronto & Hamilton Railway.

The Banwell, Hoxie Wire Fence Co. is forming a Canadian company for the purpose of manufacturing wire fences. It is an offshoot of the McGregor, Banwell Wire Fence Co., of Adrian, Mich. The capital stock will be $100,000, $75,000 being paid up. The company has secured a site in Hamilton, and will erect a factory at once.

An express train, with Governor McKinnon, Premier Peters, and many other inland notables, passed over the million dollar Hillsborough bridge and 44 miles of new Government railway to Murray Harbor, on Oct. 27. The bridge stood the strain of the heaviest engine and train with little or no deflection. The formal opening of the bridge and railway is expected about Nov. 1.

The Dominion Coal Co. has been considering some improvements at the works. A $100,000 contract has been awarded to the Canadian Westinghouse Co. for installation of electrical apparatus for the collieries at Glace Bay, N.S. The contract calls for three generators of 500 k.w. each, twelve motors, and 89 transformers. The motors will be used for driving pumps and other machinery about the mines.

A new company, called the Canadian Cordage Company, to have headquarters in Toronto and to operate factories at Chatham, where binder twine will be made of flax, is being organized. The capital is to be $250,000 and well known men are named as financing it, including Wm. Mackenzie, G. H. Campbell and J. P. Murphy, Toronto; R. P. Roblin, Winnipeg; A. F. MacLaren, Stratford; H. Mountain and L. H. Marshall, New York. If Chatham offers sufficient inducements a $60,000 factory will be built there and the flax twine will be sold at about 8 cents per pound.

The Pratt & Whitney Co., of Hartford, Conn., have purchased a plant in Dundas, Ont., for the manufacture of its full line of small tools, taps, reamers, milling cutters, punches, dyes, etc. The building is a modern structure and the power plant is already in place. The machinery equipment is being gotten ready and will be sent there and operations begun immediately. This plant will also include a department for manufacturing a full line of twist drills and elaborate equipments of special machinery having been purchased for this purpose. The output of this new factory will be handled by the Canadian Fairbanks Co., Limited, who will have the exclusive sales agency for Canada.

Companies Incorporated.

Dunlop Tire Co. have changed the corporate name of their company to the Dunlop Tire & Rubber Goods Co., Limited.

Economy Powder Co., Ottawa, share capital $10,000; purpose, to manufacture explosives. The directors are Frank Joy Boyer, John Tyson Embree, Arthur Heim, all of Reading, Pa., and Philip Leslie Neame, of Ottawa.

W. C. Wilcox, Limited, Winnipeg, share capital $200,000; purpose , to manufacture all kinds of tools and machinery. The incorporators are Wm. H. Meneray, W. C. Wilcox, Henry Veasey, Thomas Sharpe and Geo. A. Metcalfe.

Liskeard Brick, Coal & Lumber Co., Toronto, share capital $40,000; purpose, to manufacture, buy, sell and deal in brick-earth, bricks, tile, lumber. The directors are Milton Robbins Jennings, James Hossack Woods, and Henry Jasper Martin, all of Toronto.

Alexandra Oil & Development Co., Toronto, share capital $100,000; purpose, to carry on mining, milling, reduction and development work. The directors are Arthur Radcliffe Boswell, Herbert Wedderlie Edgar, and Alice Maude McGlasham, all of Toronto.

Alberta Portland Cement Co., Toronto, share capital $1,000,000; purpose, to manufacture portland cement, lime, clay, plaster, etc. Incorporators are Elias Talbot Malone, J. Worth Mitchell, Anthony L'Estrange, Albert Mearns, and John Alexander Fraser, all of Toronto.

Chester Silver Mining Co., New Liskeard, share capital $25,000; purpose, to carry on mining, milling, reduction and development work. The directors are Samuel Soloman, Charles Elgin Binkley, James Albert Pritchard, and Albert Victor Summers, all of New Liskeard.

White Silver Co., Toronto, share capital $100,000; purpose, to carry on mining, milling, and reduction and development work. The directors are William Fullerton White, New York; Edward Carlton Hargrave, Bay City, Mich.; William Halloway Wallbridge and John Shilton, Toronto.

Dominion Engineering & Construction Co., share capital $100,000; purpose, to carry on the business of electrical, mechanical and civil engineers and contractors. Incorporators are Victor Evelyn Mitchell, Edouard Fabre Surveyor, Charles Mackay Cotton, Joseph William Weldon, Stephen John LeHuray, all of Quebec.

Colonial Cordage Co., Toronto, share capital $50,000; purpose, to manufacture rope, cordage, twines, and all other products of hemp, jute, etc. Incorporators are William Bernard Converse, Stephen L. LeHuray, Joseph William Weldon, and Claude O. Pangman, all of Montreal.

Baynes Carriage Co., Hamilton, share capital $250,000; purpose, to carry on the business of wholesale carriage and vehicle manufacturers and dealers. The directors are Charles Tooker Grantham, Henry Norman Kittson, Peter Duncan Crerar, William Southam, Frederick William Gates, Paul Augusta Kompass, and James Bibby Baynes, all of Hamilton.

ENGINEERING FEAT AT NIAGARA.

A CHICAGO engineer has performed one of the strangest engineering feats yet witnessed at Niagara. The Canadian city of Niagara Falls operates its own water plant, and it has had difficulty in getting enough water at its intake to supply the pumps. This intake is in Victoria Park, where the big power development is under way, and the work on all sides has been very extensive. The park commissioners consulted Isham Randolph, consulting engineer of the Chicago Drainage Canal, and he proposed a remarkable plan, a plan that has excited great interest at Niagara. He suggested that the park commissioners erect a concrete column on the shore of the river at the intake, and when completed tip it over into the river so as to form a dam.

A concrete dam, built like a column, to be pushed over into Niagara River.

The concrete column has been erected. It is 50 feet high, and stands on a trestle that is twenty feet high above the ground level. The column is 7 1-3 feet on each side. Right through the centre runs a heavy chain, the purpose of which is to hold the six big blocks of concrete together when the column is broken, as it falls, by wooden wedges placed in one side about six feet apart. These wedges are twelve inches thick on the outside, and taper to six inches toward the centre of the column. The chain weighs 300 pounds, and it will be strong enough to hold the blocks together against the current as the water is sucked over the Horseshoe Falls. The site for the work is only about 600 feet back from the brink of the precipice.

This concrete column was built in a wooden frame, with scaffolding around it at various stages as its height grew. Its approximate weight is about 200 tons, but it is planned to tip it easily by means of jacks that will work under timbers at the base of the trestle. When it falls it will tumble a little up stream, and in order that ice may be floated off from the intake in Winter an opening will be left between the dam and the edge of the river. This giant column is now standing near the edge of the Horseshoe Falls drying out. It will be about a month before it is dropped into the river to serve the purpose of a dam.

TO AMEND BUILDING BY-LAWS.

The Montreal City Council will shortly be asked, by Ald. Chausse, to reconsider the building by-laws now in force there.

A great many concrete structures are now going up, and as the by-laws do not cover this class of building Mr. Chausse desires that laws be enacted so that the city may collect the necessary taxes.

The Canada Motor & Cycle Co. have commenced work on a new brick building at Toronto Junction.

Winnipeg Baptists are to erect a new church near St. James' Park.

HEATING AND PLUMBING

MODERN FACTORY PLUMBING

IT is becoming more generally recognized that it pays for employers to show consideration for the comfort and welfare of their workmen and in the United States the National Civic Federation has a department with a permanent secretary, who devotes her time to working amongst manufacturers and aiding as far as possible to bring about conditions which will tend to encourage the growth of a better feeling, and the development of more rightful relations between employers and employes.

In Canada this important work has not been taken up aggressively as yet, but in the recently erected model manufacturing plant of the Canadian Westinghouse works at Hamilton a splendid example exists of what can be done in this direction by far-seeing and liberal-minded employers. In the Westinghouse factories a system of plumbing has been installed for the workmen's use, the equal of which does not exist in any Canadian factory. Illustrations are reproduced to show the class of work done, the photographs being taken especially for Hardware and Metal in order that the Canadian plumbers may have before them an outline of what can and should be done in other manufacturing plants throughout the country.

This plant of the Canadian Westinghouse Company is one of many illustrations of Canadian industrial expansion during the past few years. The name "Westinghouse" has now a world-wide reputation in the industrial field, built up by the inventive genius, business capacity and enthusiasm of the founder of the Westinghouse industries, Mr. George Westinghouse, assisted by the powerful group of practical mechanics and executive heads he has gathered around him.

The Canadian organization is quite distinct from the American concern, considerable Canadian as well as Westinghouse capital being invested in the enterprise. The board of directors consists of the following: George Westinghouse, George C. Smith, L. A. Osborne, W. Y. Soper, C. F. Sise, H. H. Westinghouse, F. H. Taylor, Thos. Ahearn, P. J. Myler and Hon. J. M. Gibson. Besides the head office in Hamilton the company have sales offices in Toronto, Montreal, Halifax, Winnipeg and Vancouver. The air brake department, a manufacturing plant for which was started in Canada about ten years ago, has been consolidated with the electrical department in the Canadian company, the old air brake works being left intact.

Row of Basins, with Closets in Rear, General Machine Shop, Westinghouse Works, Hamilton.

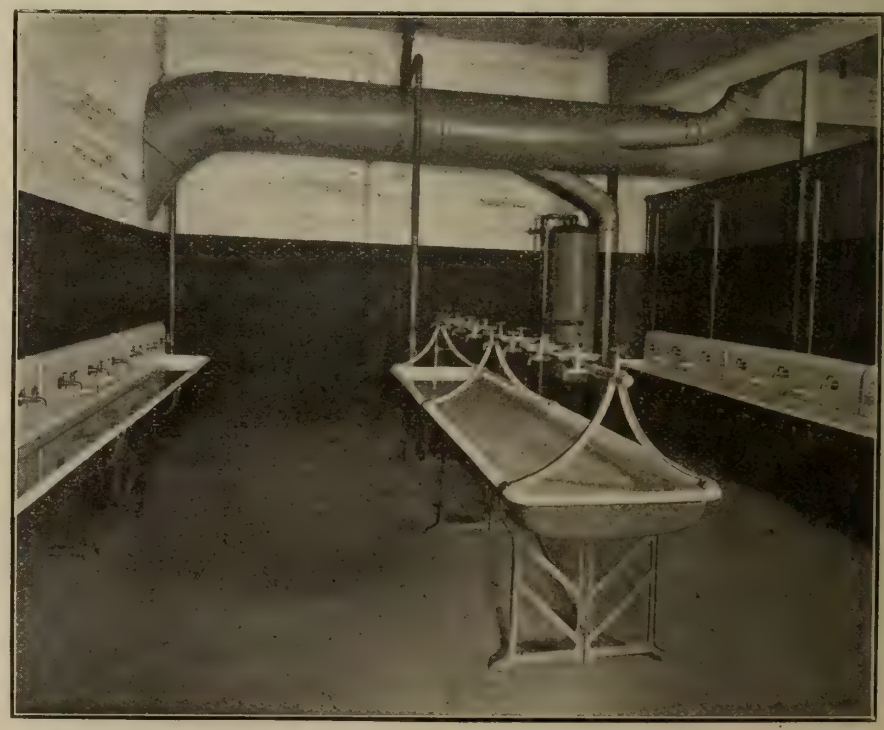
Toilet Room in Detail Bldg., Westinghouse Works, Hamilton.

The buildings comprising the plant are constructed of concrete and brick, and in addition to the fireproof construction of the buildings an excellent fire protection system exists, a fire pump of 1,500 gallons per minute capacity being located in the boiler house annex. The fire equipment throughout the building includes piping for sprinkler sprays, also numerous coils of hose connected to piping, each coil being marked by red incandescent light, constantly burning.

The heating and ventilating is designed on the plenum system, the air being drawn from the outside by large fans and discharged into the building by means of piping, the foul air finding egress through doors, windows and regular ventilating outlets. The system was installed by Sheldon & Sheldon, Galt. Steam used in the heating system is supplied from a Stirling boiler plant, being piped to convenient centres in each building where the necessary steam coils and fans are located. Besides this steam radiators are installed where deemed necessary. To distinguish the various piping systems in the plant according to their use, such as steam, water, pneumatic, gas, etc., each system is painted a distinctive color, thus lessening danger of accidents.

There are nine toilet rooms located throughout the works for the convenience of the employes and the illustrations will give a fair idea of the beauty and

high quality of the materials installed. Four of the rooms are located in the detail building, two in the office, one in the foundry, one in the pattern shop and one in the warehouse, and in order to save floor space and be of greatest convenience to the various departments served the work is installed on mezzanine floors. There is also an emergency toilet room in case of accidents. The rooms on the various flats are accessible by broad stairways of steel concrete construction, guarded by iron pipe railings of special pattern. These as well as much of the sheet metal work, including a large paint machine, were included in the work done by Messrs. Wallace & Son. Lockers are also available for the uze of the company's employes.



Toilet Room in Warehouse Westinghouse Works, Hamilton

Accompanied by Alderman Wallace and a representative of the Westinghouse Company, a member of the editorial staff of Hardware and Metal made a tour of the works recently. The first place visited was one of the toilet rooms in the detail building, the excellence of the material installed and the general cleanliness being such as to lead one to believe that the location was in a high class hotel or public building. In remarking upon this the Westinghouse representative stated that their experience had been that they could secure a higher class of work from men who were cleanly in their habits than from slovenly employes. It pays, therefore, to set a good example and by adopting a set of rules the employes readily co-operate in the endeavor to improve their working environment. In the room referred to there were eleven open and one closed closets, the former being for general use and the latter for the heads of the department. In addition to this there were six urinals, twenty-four basins and a slop sink, this outfit being practically duplicated in another room set aside for the female employees. Both hot and cold water for the users of the lavatories. As the illustrations show, the arrangement of the various rooms differs according to the space available and the requirements of the staff. In one case as many as thirty basins are arranged in a row while in the foundry it will be seen that the trough system with running streams of water is used in preference to the individual basins.

The fixture which attracted most attention was the "Arno" Syphon Washdown Closet in universal use throughout the works, it being fitted with the Osborne improved automatic valve and galvanized sealed tank with a water pressure of seventy-five pounds for flushing purposes. A cut of this fixture, supplied by the Standard Sanitary Manufacturing Company is reproduced, it differing, however, from the one installed in the detail that an aluminum seat is used instead of the regular natural oak oval seat. Another neat fixture was the drinking fountain, supplied by the J. L. Mott Company, the fountains being located at convenient situations throughout the buildings.

The specifications called for the installation of sixty of the "Arno" closets, twenty-four "Stevens" urinals, over one hundred basins of the "Omar" type, one wash trough with double sink and two with single sinks, eight slop sinks and five hot water heaters, practically all the material being porcelain enamelled iron and manufactured by the Standard Sanitary Manufacturing Company, Pittsburg, the wash troughs, however, being made by the Standard Ideal Sanitary Company, Port Hope. The work covered included the furnishing, setting and laying of all the soil pipes, waste pipes, vent pipes and floor drains from all the fixtures to their respective traps, branches, and connections to the outside drainage system, and the furnishing of all fixtures and fittings except the slate work. All valves 1½-inch and under were stipulated to be the Jenkins Brothers' Globe Valves.

The entire job amounted to over $10,000, and so well did Messrs. Wallace & Son do their work that after six months operation of the plant they can say that they never had to send a man back to do the slightest repair job or make a single change. The firm make a specialty of factory work and have recently had in hand the installation of plumbing systems in the new factories of the Canadian Shovel Company and the Chipman & Holton Knitting Company, the plumbing and heating in the works of the Canadian Drawn Steel Company and the installation of a shaving exhaust system in the Fensom Elevator Works.

WM. STAIRS, SON & MORROW, LIMITED

HALIFAX, N. S.

Welfare Department of the National Civic Federation and in order to outline their plan of propaganda the following extracts from a report of an address recently delivered by Miss Gertrude Becks, secretary of this organization, is reproduced :

"The great value of light and depressing effects of dark work rooms were emphasized, poor light being the cause of many headaches. Ventilation by means of sliding doors in the roofs and the exhaust air system was also alluded to, and the various methods in vogue at different establishments explained. Slides were shown of apparatus employed for removing dust from the foundry sand room, and the advantage of automatic stokes in use at different places was demonstrated. By means of a series of pipes fresh air is supplied to the faces of the workers. Pure drinking water easily accessible is another essential feature. One method of supply was shown where water is delivered at 55 degrees F. and kept in constant circulation.

"A slide was exhibited showing an establishment fitted with individual wash bowls of enamelled iron, so constructed that they might be tipped over into troughs where the water would run off. Shower baths were also installed, and departments well fitted with wire lockers, it being claimed that wooden lockers are not the best on account of the accumulation of vermin, and by the use of wire lockers this danger is not only eliminated but a good source of ventilation is admitted. Methods of drying clothes on steam pipes were also shown on the screen, and the necessity for general janitor service in large establishments mentioned. In many cases the question as to why these facilities were not made use of by the men was answered by the fact that they are inadequate, unclean, too cold and frequently the men do not know of the existence of such accommodations, which were sometimes in remote places. In several instances the floors are of concrete with wooden racks in the individual compartments upon which the men stand, and the entire floor can easily be cleaned by a hose. Slides were shown of dressing rooms for women, where the clothing in stormy weather is hung over steam pipes and dried in a method similar to that used for the men. While it is not essential that a girl should be seated all day at her work, yet it is necessary that she should sit part of the time, and chairs fitted with back and foot rests according to the height should be provided for her welfare. These can be so constructed on rollers, fitted in grooves, that they may be readily moved from place to place, enabling the girl to operate several machines. Photographs were shown of lunch rooms for the officials, the superintendents and the working classes, and the different styles of lunch counters in use, where some bits of food have a nominal price of three, four or five cents. The attractive and clean lunch room is more apt to be a success than one which is not pleasant. In some establishments the junior help have coffee, tea and milk given. Rest rooms and hospitals for both sexes were also shown, and the methods of fire protection and the advisability of organizing fire brigades among the younger men suggested, and a description given of some houses for firemen showing the delightful surroundings.

"The question of transportation was referred to, showing conveyances for both men and women, and the better methods of allowing the girls to leave the factory a few minutes before the men, instead of all leaving at the same time, thus meeting the moral question and preventing the jostling of the girls by the men. Special stress was laid upon the importance of forming men's clubs where the men may assemble and play pool, and of providing places where meetings may be held once a month ;

The "Arno" Syphon Closet and Galvanized Presure Tank.

also emergency hospitals where relief may be had in cases of serious accident. Another very good feature adopted by different concerns is the policy of establishing vacation houses, where employes may spend their holidays. In some establishments two weeks' vacation is given with pay to all engaged over one year, and in other cases overtime has been abolished with good results. Several views of employes' homes and tenement houses were exhibited, the rent for which is made nominal, and all for the welfare of the employes.

"Each industrial establishment is a study. Certain things may be done in one place which may not be applicable to another in the same trade, but in any event constant attention is needed or failure is the result."

SEMI-ANNUAL PROVINCIAL CONVENTION

OF MASTER PLUMBERS AND STEAM FITTERS' ASSOCIATION.

ABOUT ninety delegates were present at the semi-annual convention of the Master Plumbers' and Steam Fitters' Association held in Toronto on Thanksgiving Day, the gathering being an unqualified success, there being twice as many delegates present as at any former semi-annual meeting and indeed only one annual meeting surpassed it in numbers, that being the Good Friday convention held in Guelph this year when twenty-five towns and cities were represented by ninety-five delegates. The ninety delegates present on Thanksgiving Day represented twenty-two towns and cities, even distant Port Arthur sending down a representative for the first time in the history of the association. Gananoque also had two delegates present for the first time since the organization of the local association.

The convention was called to order promptly at ten o'clock by President W. J. Walsh, he appointing C. E. Pickard, Toronto, to act as sergeant-at-arms, and W. J. Clark, Geo. Clapperton, Toronto, and T. L. Partridge, London, as a credential committee. A roll call of the officers showed the following to be present:

President, W. J. Walsh, Hamilton.
Vice-Pres., Harry Mahoney, Guelph.
Treasurer, J. H. Wilson, Toronto.
Financial Secretary, T. H. Davies, Hamilton.
Secretary, W. H. Meredith, Toronto.
Executive committee, E. H. Russell, London.

The credential committee reported the following delegates present:

Delegates Present at Convention.

Alliston—W. B. Clifton.
Berlin—John Hainsworth, A. Sacks, P. Gies, H. Wolfardt, H. G. Hymmen.
Barrie—J. H. Neelands.
Brantford—T. A. Cowan.
Guelph—Harry Mahoney, Fred Smith, A. Malcolm, W. J. Stephenson.
Galt—Jas. Scott, T. D. Lockart, Harry Dakin.
Gananoque—W. W. Bennett, W. F. Martin.
Hamilton—W. J. Clark, T. H. Davies, H. W. Morley, W. D. Smith, Geo. E. Pyle, Wm. Archibald, Hugh Wallace, Jas. H. Stewart, A. Rodgers, J. S. Kennedy, Thos. Jones, W. J. Walsh.
London—E. H. Russell, R. Haslett, C. F. Needham, B. Noble, T. L. Partridge, Thos. Rich, A. Milne, James Green, O. L. Robb, Wm. Young, Wm. Smith.
Montreal—J. A. Gordon, Peter Ogilvie.
Midland—T. J. Campbell.
Niagara Falls—F. Heximer, G. H. Clark, S. R. Ward, T. J. Miller.
Orillia—H. T. Andrews, T. Phillips, R. Manier.
Paris—J. Glenister.
Peterboro—T. D. McGregor, E. M. Best, R. G. Sturgeon.
Port Arthur—J. Marshall.
Stratford—H. J. Peter, A. E. Sylvester, A. McDonald.
St. Thomas—C. C. Bull, J. E. Stott, F. Cook.
Sarnia—A. J. Joss.
Strathroy—A. Stoner.

W. J. Walsh, Hamilton, Provincial President.

Toronto—J. E. Knott, Geo. Clapperton, K. J. Allison, W. B. Inwood, J. H. Flaherty, J. J. McKittrick, James Wilson, F. Armstrong, A. Purdy, A. M. Bond, L. LeGrow, C. E. Pickard, J. E. Fullerton, P. Jessimane, J. W. Erwood, J. B. Fitzsimmons, D. Morgan, N. Blumberg, J. Sherlock, Geo. H. Cooper, John Ross, J. J. Lyndon, H. Hogarth, W. H. Meredith.
Waterloo—J. Conrad.

Committee Reports.

President Walsh in opening the business of the convention stated that he was glad to see Mr. J. A. Gordon, Montreal, national secretary, and Mr. Peter Ogilvie, Montreal, a past national vice-president of the association, present as fraternal delegates, and on behalf of the convention he gave them a hearty welcome and extended them the full privileges of the convention. Both gentlemen in reply assured the meeting that they were not present as representatives of the national organization, but merely came to gather new ideas that might be of benefit to the craft down east.

This being the semi-annual meeting the officers' reports were short and of a routine nature. The president's report referred to the reception accorded to the delegation that attended the Master Steam Fitters' Convention held at Atlantic City and the Master Plumbers' Convention held in Atlanta, Georgia, last June. In both instances the American organizations gave the Canadian delegates a hearty reception and much information was obtained of value to association work in Canada. The president also referred to the work of the special committee appointed to draught a sanitary by-law for adoption by each municipality throughout the Province, the committee being likely to have their work completed in time for the annual meeting on Good Friday next.

The secretary's report dealt more particularly with the organization work, the report showing that while Niagara Falls was the only association organized there were substantial additions made to the membership of other associations and many individual members had been enrolled from towns where no local association exists. It was the intention of the executive to push the work of organization in the eastern part of the Province during the Fall and Winter, and substantial gains were expected before the next annual meeting. The treasurer reported that while he only made an annual statement of the association finances he would say that all liabilities had been met and the association still had a balance on the right side of the ledger.

Next Gathering at Hamilton.

Regrets were expressed on all sides at the absence through illness of the past national president, Robert Ross, and Provincial Past President Wm. Mansell, who is on a trip to the Pacific coast. It was pleasing, however, to see the familiar face of William Smith, of London, a past president of the national organization and a regular attendant at conventions in the early days of the association. It was during Mr. Smith's presidency that the national association appointed a committee to draft a constitution for the formation of Provincial associations.

It was felt that there should be some kind of by-laws governing local associations and to this end the executive committee were requested to draft a model code of by-laws, and present at the next annual meeting together with any suggested changes to the Provincial association by-laws.

Much friendly rivalry was indulged in when selecting the next place of meeting for the annual convention on Good Friday, the choice finally resting with Hamilton, the delegates from the Ambitious City assuring the delegates that a good time was in store for them.

General business of a routine nature was transacted, and under the head of good of the association a most interesting discussion took place in which delegates from all parts of the Province participated.

Convention Gossip.

A. B. Jardine & Co., Hespeler, had an exhibition of Jardine Patent Pipe Dies and Machines at the Iroquois Hotel, many delegates being present to inspect the working of the machines

which are made in Canada and very popular among Canadian steam fitters and machinists.

The office of the Taylor-Forbes Co., in

Henry Mahoney, Guelph, Provincial Vice-President.

the same building as that in which the master plumbers' offices are located, was over-run with delegates at many times during the day. Mr. H. R. Flett, the company's popular representative, was kept busy showing Sovereign Radiators to interested inquirers from all parts of the Province. Although this is the first season for the Sovereign Radiators they have already won great popularity, this being well evidenced by the large number of visitors at the Taylor-Forbes exhibit on Thanksgiving Day.

The representatives of the United Brass Manufacturing Co., Cleveland, distributed handsome tie pins to the delegates. Any plumber in Canada who has not received one of the pins can secure one by sending four cents in stamps to the company.

The Loew Supply & Manufacturing Co. had a representative, Mr. Gustav A. Peternell, present, bringing the merits of the Loew Adjustable Die Stock before the delegates by means of handsome printed pamphlets.

Of the 90 delegates present 23 were from Toronto, 12 from Hamilton and 11 from London, over half the delegation being from the three cities.

Delegates were present from 22 towns and cities, including the two from Montreal.

J. A. Gordon, the national secretary, and Peter Ogilvie, past national vice-president, came up from Montreal to give the delegates the benefit of their advice and experience.

When business is to be done the delegates were "Johnny on the spot," but when the convention was over fun and a general good time was indulged in by the ancient association of bell-ringers.

THE BANQUET.

The annual banquet of the Toronto Master Plumbers' and Steamfitters' Co-operative Association was held on Thursday evening, Thanksgiving Day, the delegates of the Provincial and representatives of the various supply houses being the guests of the Toronto association. The event was held in the beautiful assembly room of the Temple Building, and was one of the most successful of the many pleasant and enjoyable affairs held under the auspices of the association since its organization. Five long tables, seating about forty each, were arranged about the room, about one hundred and seventy being gathered around the tables.

After an elaborate menu had been disposed of to the satisfaction of all present, Mr. Fred. Armstrong, president of the Toronto association, as chairman, opened the second part of the evening's enjoyment by toasting "The King," and announcing that there would be no long speeches allowed during the evening, as a splendid musical programme had been prepared in addition to the dinner and the regular toasts. "The King" was heartily toasted, the number being followed very appropriately by a song by

W. H. Meredith, Provincial Secretary.

Mr. Jas. Fiddes, entitled the "Coronation of the King."

The next toast, "Our Guests," was proposed by Mr. C. H. Beavis, of the Toronto association, and was replied to by President W. J. Walsh, of Hamilton, Provincial Vice-President Harry Mahony, Guelph, and Provincial Secretary W. H. Meredith, Toronto. Mr. Walsh referred to the time, not long ago, when the master plumbers gave their labor for next to nothing, and cut each others throats in an endeavor to obtain contracts from competitors. The association had changed this, and by co-operating together the members were trying to secure a fair remuneration for their labor and secure prices which would allow them to install the highest type and most sanitary fixtures in order to meet the modern regulations of the Provincial Board of Health. The object the association was striving to obtain had been criticized by the press, newspaper men having secured information from interested parties, but the association, which had now grown to nearly three hundred members, residing in all parts of the Province, did not fear the press or the law courts, because they knew they were in the right. Mr. Mahoney said he was heart and soul in the organization of the Provincial association, which was the backbone of the national body, and he hoped to soon see Eastern Ontario as well organized as the west. Secretary Meredith said the Ontario plumber stands at the head of the trade in America; nowhere had he found better work done than in our own Province. It was the aim of the members of the association to put as much as possible into a job rather than to get as much as possible out of the work. The association had raised the standard of plumbing in all parts of the country, and there is now no room for the botch plumber. The association would not be satisfied before it was heard before municipal councils, Legislature and Parliament, and secured the passage and enforcement of better sanitary laws. In closing Mr. Meredith called upon the members of the association in all parts of the Province to stand shoulder to shoulder and united win.

Mr. Fred. Armstrong proposed the toast of "Manufacturers and Jobbers," and read a letter from Mr. Edward Gurney, stating that he regretted exceedingly his inability to be present at the banquet, and wishing the delegates a very pleasant evening, as well as congratulating them upon the completion of another prosperous year. President Alex. McMicheal, of the Central Supply Association, responded briefly, stating that the manufacturers and jobbers had felt the benefit of organizing themselves into an association, and felt certain that the master plumbers would find equal benefit in co-operating together rather than fighting together. Mr. McMicheal wished the master plumbers' association another successful and prosperous year. Mr. Peter McMicheal, of the Dominion Radiator Co., said the Central Supply Association was not or-

W. J. Colesworthy, Representative of the United Brass Manufacturing Co., Cleveland.

ganized to fight the master plumbers but merely to protect the interests of the supply men. Practically every class

WILLIAM STREET, - TORONTO

PLUMBING MARKETS

QUEBEC.

Office of HARDWARE AND METAL,
232 McGill Street,
Montreal, November 2, 1905.

IRON pipe, which has been reported scarce for two or three weeks, is still firmer, a decided shortage having developed in certain sizes. The advance shown last week has been stiffly maintained and strength is, more than ever, the characteristic of the market.

Lead pipe, though it remains unchanged in price is expected to be advanced as the result of another jump in pig.

Fittings are still very difficult to obtain, owing to the fact that the foundries are unable to fill orders as fast as they come in. Much of this activity is of course, due to the anxiety of plumbers to stock up before the close of navigation. The last sailings of some of the barges and boats on the river have already been announced, and even in districts which cannot be reached by water, winter freight rates will soon be in force, and there is a great rush to get in stock before this advance.

Range Boilers—Nothing has developed to change the situation and prices are: Iron clad, 30 gallon, $6.00, and 40 gallon, $7.50 net; copper, 30 gallon, $22.00; 35 gallon, $24.00; 40 gallon, $28. The discount on copper boilers is 15 per cent.

Lead Pipe—There is a strong feeling evident that prices must soon be raised to correspond with the continued upward movement of pig lead. For the present, however, prices remain as follows: Discounts twenty-five per cent. and 5 per cent. f.o.b. Montreal, Toronto, St. John, N.B., and Halifax; f.o.b. London, 15c. per hundred lbs. extra; f.o.b. Hamilton, 10c. per hundred lbs. extra.

Iron Pipe—There is a still more noticeable scarcity which holds last week's advance. Very firm. We quote: Standard pipe, in lots of 100 feet, regular lengths, 1-4 inch, $5.50; 3-8 inch, $5.50; 1-2 inch, $8.50; 3-4 inch, $11.50; 1 inch, $16.50; 1 1-4 inches, $22.50; 1 1-2 inches, $27.00; 2 inches, $36.00; discounts on black pipe, 1-4 inch, 62 per cent.; 3-8 inch, 62 per cent.; 1-2 inch, 72 per cent.; 3-4 inch, and upwards, 74 per cent. Discounts on galvanized pipe: 1-4 inch, 47 per cent.; 3-8 inch, 47 per cent.; 1-2 inch, 62 per cent.; 3-4 inch and upwards, 64 per cent. Extra heavy pipe of 100 feet lots are quoted as follows: 1-2 inch, $12.00; 3-4 inch, $15.00; 1 inch, $22.00; 1 1-4 inches, $30.00; 1 1-2 inches, $36.00; 2 inches, $50.00. The discount for black pipe is: 72 1-2 per cent., and for galvanized, 61 per cent.

Iron Pipe Fittings—Orders are being filled only with great difficulty owing to the inability of local foundries to keep up to the demand. We are quoting the following prices: Discounts on all sizes of nipples up to six inch, 67 1-2 to 70 per cent.

Soil Pipe and Fittings—The optimistic feeling continues and the market is very strong. Standard soil pipe, 50 per cent. off list. Standard fittings, 50 and 10 per cent. off list; medium and extra heavy soil pipe, 60 per cent. off. Fittings, 60 per cent. off.

Solder—Prices are steady, showing no fluctuations. We quote: Bar solder, half-and-half, guaranteed, 21c.; No. 2, (wiping solder) 17c.

ONTARIO.

Office of HARDWARE AND METAL,
10 Front Street East,
Toronto, Nov. 2, 1905.

IRON pipe manufacturers have increased their prices as expected, the advance amounting to five per cent. For some weeks Hardware and Metal has been predicting this action, the declaration of an open market on iron pipe and fittings a couple of weeks ago coming as a surprise to the entire trade. The open market still continues, although the jumping of prices by manufacturers will tend to strengthen the market. Cutting is not nearly so prevalent as a week or so ago, but the steamfitter still has a chance to load up at shaded prices.

Other advances are expected next week, closets being one line booked for a rise. The strong condition of the metal markets also indicates that brass, copper and lead goods will make an upward jump.

Business in all lines continues very lively, last month's trade again reaching top notch figures. A falling off is looked for shortly, but in the meantime the supply houses are doing all the business they can conveniently handle and some of the manufacturers are behind in their shipments considerably.

Prices continue as reported last week.

Lead Pipe—An advance is certain owing to the increasing price of pig lead. Our quotations are as follows: Lead, 7c; lead waste pipe, 8c.; discount, 25 and 5 per cent.

Soil Pipe and Fittings—Demand is active with producers keeping well up to their orders. We quote: Medium and extra heavy pipe and fittings, 60 per cent.; 7 and 8 inch pipe, 40 and 5 per cent.

Iron Pipe—Manufacturers have advanced prices 5 per cent. owing to the high prices of iron and the price-cutting in Toronto is not likely to last much longer. A large trade is being done at the shaded quotations. We quote as follows: Black, 1-4 inch, $2.04; 3-8 inch, $2.06; 1-2 inch, $2.30; 3-4 inch, $2.88; 1 inch, $4.13; 1 1-4 inch, $5.63; 1 1-2 inch, $6.75; 2 inch, $9.00; 2 1-2 inch, $15.75; 3 inch, $30.50; galvanized 1-4 inch $2.86; 3-8 inch, $2.89; 1-2 inch, $3.15; 3-4 inch, $4.03; 1 inch, $5.78; 1 1-4 inch, $7.88; 1 1-2 inch, $9.45; 2 inch, $12.60; 2 1-2 inch, $23; 3 inch, $30.

Iron Pipe Fittings—Prices are being held firmer. The open market, still exists, however, and a larger trade than usual is being done. We quote as follows: Cast iron, elbows, tees, crosses, etc., 65 per cent.; cast iron plugs and bushings, 65 per cent.; flange unions, 65 per cent.; nipples, 75 per cent.; iron cocks, 60 per cent.; Canadian malleable, 35 per cent.; American malleable, 25 per cent.; malleable unions, 65 per cent.; malleable bushings and plugs, 60 per cent.; C. I. ceiling plates, plain or N. P., 70 per cent.; C. I. floor, 80 per cent.; hookplates, 60 per cent.; expansion plates, 65 per cent.; headers or branch tees, 65 per cent.; ring hangers, black or galvanized, 60 per cent., American list.

Copper and Range Boilers—An average business is being done. The discount continues at 15 per cent.

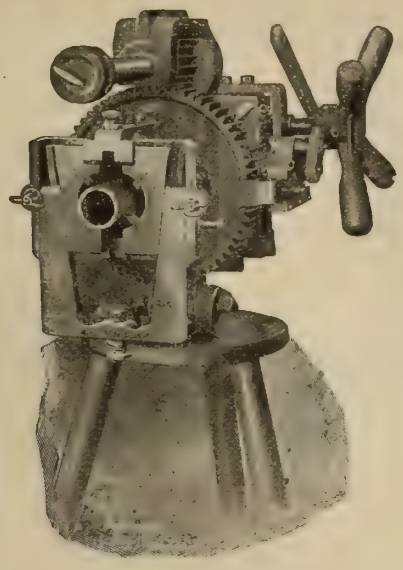
Galvanized Iron Range Boilers—Building is well advanced and many boilers are being installed. Trade continues brisk. Our quotations are as follows: 12 gallon capacity, standard, $4.50; extra heavy, $6.50; 18 gallon, standard, $4.75; extra heavy, 6.75; 24 gallons, standard, $4.75; extra heavy, $6.75; 30 gallon, standard, $5; extra heavy, $7.50; 35 gallon, standard, $6; extra heavy, $9.50; 52 gallon, $11; extra heavy, $14; 66 gallon, standard, $18; extra heavy, $20; 82 gallon, standard, $21; extra heavy, $24; 100 gallon, standard, $29; extra heavy, $34; 120 gallon, standard, $34; extra heavy, $40; 144 gallon, standard, $47; extra heavy, $55.

Solder—Higher prices for solder as lead and tin are both jumping upward. We quote: Bar solder, half-and-half, guaranteed, 19 1-2c.; refined, 18 1-4c., and wiping at 17 1-2c.

Enameled Ware — An enormous demand for Canadian ware is reported, so much in fact that the producers are fully a fortnight behind in their shipments. Our quotations are as follows: Baths, rolled rim, 5 feet, 2 1-2 inch rim, first quality, $17.50; special, $15.50; 3 inch rim, first quality, $18; special, $17; 5 1-2 feet, 2 1-2 inch rim, first quality, $19; special, $17; 3 inch rim, first quality, $20.50; special, $18.50. Lavatories, discounts 30 to 40 and 5 per cent. Sinks, 18 x 30 inch, flat rim, first quality, $2.45; special, $2.00.

The ratepayers of Woodstock, Ont., last month carried a by-law to raise $50,000 for improvements to the water works and electric light plants.

G. Keller, New York, N.Y., has invented an improved lamp for electric lights, gas lights, etc, arranged to shed a powerful but extremely soft light. This result is accomplished by forming the lamp globe with a chamber in which water or any other desired fluid may be contained, and through which the light must pass.



RAMSAY'S ALUMINUM PAINT

The beautiful silvery Paint—better and cheaper than silver—must be made right for right effects. Splendid for store fronts, stove-pipes, radiators, decoration work and a hundred wants. Mixed ready for use, in handsome tins from ¼ pint up.

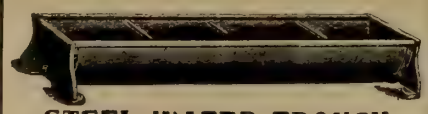
SEMI-ANNUAL CONVENTION.

(*Continued from page 66.*)



of men were organized to-day, and the manufacturers were only in line with modern business methods in coming together into an organization. If the supply association did not believe that the master plumbers' association was in the best interests of the public they would not support it, but they realized that it had done a vast amount of good, and their best wishes were with the M.P.A. in its continued success. Mr. W. H. Carrick, of the Gurney Foundry Co., congratulated the delegates upon the large and successful convention they had held, and wished them every success during the coming year. Mr. H. W. Anthes, of the Toronto Foundry Co., spoke briefly and received an ovation from the delegates. Mr. F. J. Travers, of the Canadian Radiator Co., Montreal, was the last speaker responding to this toast, he drawing attention to the fact that the public was getting better service now than before the association was formed. He reminded the delegates of the old motto, "In union there is strength."

Mr. Jas. McKittrick proposed the toast of "Our Sister Associations," stating that the association was building not for to-day but for the future. Great good had resulted from the work of the organization undertaken three years ago, and the delegates were to be congratulated on the feeling of unity and loyalty which existed among the master plumbers through the entire Province. Messrs. Ben. Noble, London; W. G. Smith, Hamilton, and Peter Ogilvie, Montreal, also spoke to this toast, dwelling upon the good results which had followed the organization of the associations in their districts, and of the satisfactory manner with which they had been able to adjust differences with the manufacturers and jobbers, owing to the association's influence. It was very satisfactory to know that their relations with the manufacturers were satisfactory in every particular.

Mr. K. J. Allison proposed the toast to the "Medical Health Department," making the only long speech of the evening, and receiving a most extended ovation from the delegates who had become possessed of the United Brass Co.'s cow bells. Mr. Allison referred to the inability to be present of Medical Health Officer Dr. Sheard, illness being the cause of his absence. The delegates re-echoed the sentiment expressed by the speaker when he stated that Dr. Sheard was the most efficient health officer on the continent. Inspectors Kirk and Meadows responded to this

Alderman Hugh Wallace, of Hamilton, proposed the toast of the "Master Plumbers' Association of Toronto," stating that formerly the work of plumbing organization throughout the Province was left entirely to Toronto, but now the influence of the association extends to every place in Ontario where plumbing work is done. He made reference to the self-sacrificing and pioneer work of Ex-Presidents Robert Ross and William Mansell, and President Fred. Armstrong, in responding, stated that credit should also be given to Messrs. McKittrick and Sherlock, to whom much of the credit for the success of the association in its early days was due.

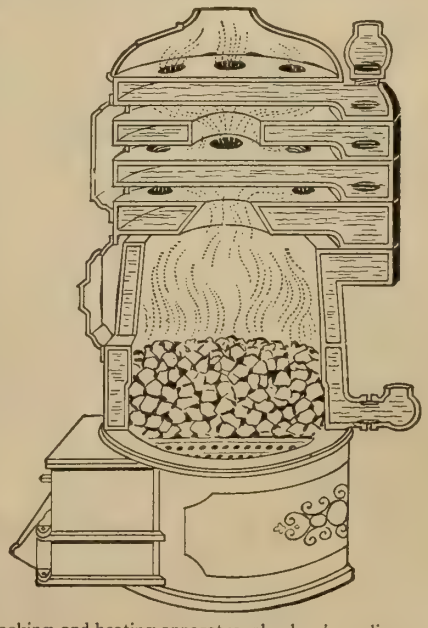
A BOILER OF THE HIGHEST EFFICIENCY

We have produced in the Oxford Hot Water Heater a boiler which contains many exclusive features and for which we claim a greater amount of power and efficiency than any other make on the market. Our boiler has proved these claims correct after two years' use in the United States.

By greatly increasing the heating surfaces, we have produced a boiler that will more quickly and with a less consumption of fuel give a much higher temperature.



The fire-pot has a greater diameter at the bottom than the top. This prevents an accumulation of dead fuel and ashes around the most active surface of the boiler. Above the level of the top of the fuel the walls overhang the fire, giving a great heating surface, compelling the heat to sharply impinge instead of merely passing by them, as would happen if these surfaces were vertical.

The first section above the fire is double the thickness of other sections, and the flue openings are bell-shaped, thus giving a great amount of heating surface.

The entire boiler is steel and iron, no rubber washers being used. All joints are made with smooth tapered steel nipples, pressed into smooth tapered openings, making an absolutely indestructible joint. The smaller sized boilers are shipped with all the sections built together, thus saving three quarters of the time ordinarily taken in erecting a heater.

Oxford Steam and Hot Water Radiators can't leak because every joint is metal to metal—no gaskets or washers—with Oxford Boilers they make a perfect Heating System.

Write for the "Gurney Oxford Book of Hot Water and Steam Heating Apparatus." It is free.

WE also manufacture cast iron and steel plate ranges, gas stoves, ranges and heaters, hotel ranges, warm air furnaces and all kinds of cooking and heating apparatus, plumbers' supplies.

The Gurney-Massey Co., Limited, Montreal, Que. 128
The Gurney Standard Metal Co., Limited, Calgary, Alta.

The final toast of the evening was that of the "Ladies," presented by Mr. Geo. Cooper, who, in the eloquent language of one who has decided to desert the life of a bachelor for that of a benedict, extolled the good qualities of the fair sex. Harry Mahoney, of Guelph, responded, bringing an enjoyable evening to a close by one of his witty Irish speeches.

Toothpicks.

The invitations to the banquet said business suits would be worn. Some of the boys couldn't attend because they had nothing but law suits on their hands.

Who was chairman—Kenneth Allison or Fred. Armstrong?

Did you hear Alex. Joss sneeze? Some likened it to an engine coming out of the Sarnia tunnel.

Messrs. Shoenberger and Colesworthy refused to let the delegates forget that the United Brass Mfg. Co. is still doing business at Cleveland.

"Real pain for our sham friends and champagne for our real friends," was the motto inscribed on the package of toothpicks presented to each banquetter by the United Brass Mfg. Co., Cleveland, Ohio.

"Jimmy" Brown made himself solid with the boys by his well-rendered songs.

Kenneth Allison made a good leader of the cow-bell orchestra. The United Brass Mfg. Co.'s popular representatives brought up a parcel of brass bells for distribution after the banquet, but some of the delegates made a raid and captured the bells. Thenceforth there was music in the air, and the chairman's job was anything but a "lead pipe" cinch.

Even if some of the Toronto M.P.A.'s are booked for a term at the Provincial Sanitarium on Strachan avenue, they will have pleasant memories of Thanksgiving night.

The committee responsible for the jollification were: Fred. Armstrong, chairman; W. H. Meredith, secretary, and Messrs. P. J. Hayes, K. J. Allison, C. H. Beavis and Wm. Mansell.

Master Glynn, James Fiddes, and Bert Harvey, ably entertained the delegates with their songs, interspersed between the various toasts and speeches.

Supply Men Present.

Amongst the representatives of the supply houses present Hardware and Metal noticed the following:

Books for Plumbers, Steam Fitters, Etc.

Furnace Heating

By W. C. Snow.

The author has prepared a book of reference for the furnace man or the architect. There are tables which have been tested by years of practical use. They are of great value to the practical furnace man.

170 pages, 6 x 9 in.; 90 illustrations; cloth bound.

Price, post paid, - - $1

(This book has had a heavy sale in Canada.)

* * *

Kitchen Boiler Connections.

A selection of practical letters and articles relating to water backs and range boilers.

The work is divided into two parts, the first on water backs and boilers and their connections, and the second on heating rooms from range boilers, a topic that has much practical interest to the plumber. There are few lines of work where so many little difficulties arise, and therefore the discussion of different questions which have arisen should be of great interest as well as practical value to workers in this line.

Fifth enlarged edition; 194 pages; 6 x 9¼ inches; 113 illustrations.

Cloth, post paid, - - $1

* * *

Formulas and Tables for Heating.

Being German formulas and tables for heating and ventilating work, for those who plan or erect heating apparatus. By J. H. Kinealy, M.E.; 56 pages; 4½ x 7 inches; leather.

Price, post paid, - - $1

* * *

American Sanitary Plumbing

By J. J. Sawler.

For plumbers, steam fitters, architects, builders, apprentices, etc. Containing practical information of all the principles involved in the mechanics and science of modern plumbing, illustrating with original sketches the fundamental principles of everything the plumber should know. Everything explained in the most simple language, so that it will be impossible to misunderstand anything.

Large 12mo, cloth, post paid, - $2

Steam and Hot Water Fitters' Text Book.

A book prepared for the Steam and Hot Water Heating Course at the New York Trade School, with supplementary chapters on house heating, specifications and surface estimating; by Thos. E. McNeill.

This book will be appreciated by those who wish to master the principles of steam and hot water heating. The definitions in the beginning deal with the appliances, and little by little the reader is led on until at the close he is informed how to figure surfaces, lay out plans and install heating apparatus with the necessary piping.

140 pages; numerous illustrations and diagrams; 5 x 7 inches.

Cloth, post paid, - - $1

* * *

Plumbing and House Draining Problems

A selection of articles for practical plumbers.

This volume provides reliable and practical information for ready reference and assistance to plumbers who are confronted by problems with which they have had no previous experience. One-half of the edition is devoted to new problems and special articles. This book will prove a valuable reference in any plumber's library.

297 pages; 6 x 9 inches; 146 illustrations.

Cloth, post paid, - - $2

* * *

Practical Gas Fittings.

Describing how to run mains, lay pipes and put up gas fixtures. 116 pages; 54 illustrations; 5¾ x 8 inches.

Cloth, post paid, - - $1

* * *

Practical Hints on Joint Wiping.

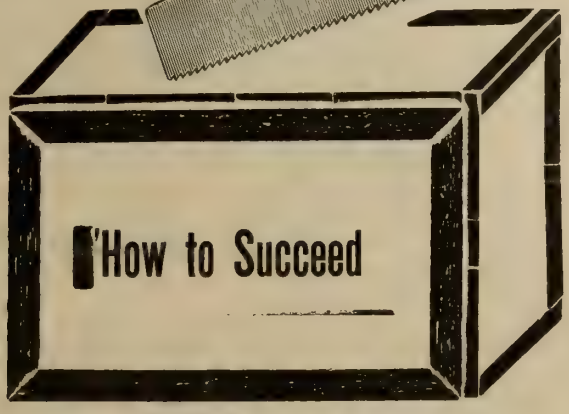
HOW TO SUCCEED THROUGH



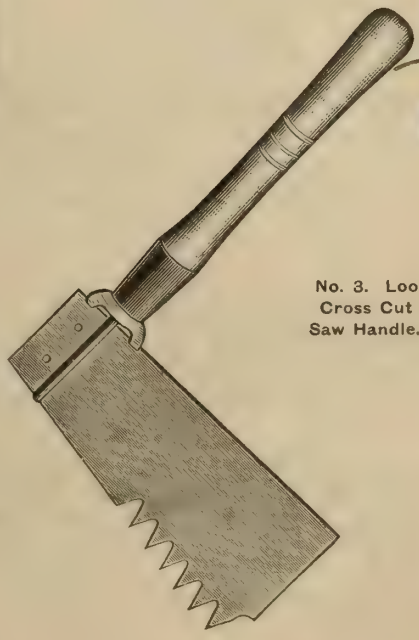
DISSTON'S SAWS

THE SECRET IS REVEALED

THEY CUT THEIR WAY THROUGH ALL OPPOSITION

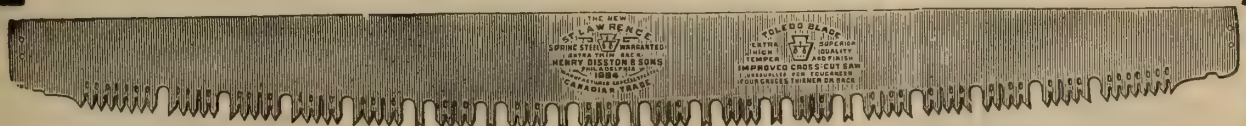
Skew Back, Warranted Spring Steel, Patent Ground and Tempered, Apple Handle, with Polished Edges and Five Improved Screws.

For anything in the **SAW LINE** refer to our 1,000-page Catalogue, No. 31.



Do you know that your success as a retailer depends on your knowledge of buying goods?

Remember what you can buy in ten minutes may take 10 years to sell; thus keeping money that you might use advantageously for some other purpose bound up, and as far from reach as if it was at the bottom of the ocean.



Discriminating buyers know that the majority of saws sold and used are "**Disston**" Saws, and that this fact is conclusive evidence of superior worth.

A word to the wise is sufficient—next time you want anything in the Saw line, stock "**Disston's.**" The Saws that sell themselves.

The name "**Disston**" has stood for all that is best in **SAWS** for the past 65 years.

No. 3. Loop Cross Cut Saw Handle.

ST. LAWRENCE.—Toledo blade, ground 4 gauges thinner on back than on teeth. Very best quality spring steel.

SALES LESSON V.

"The fence seems satisfactory itself; what is the price?" You have got Mr. Enquirer. Tell him the

Dillon Hinge-Stay Fence

is the cheapest in Canada—twenty per cent. cheaper than any other fence (point No. 4). One instance should be sufficient. Make a strong case of the fact that "Dillon" Stays and Intermediate Strands (in the lightest fencing) are made from No. 12 Wire, which is far cheaper, but far stronger, than the No. 9 soft thick wire used in most wire fencing. **Dillon Maximum** strength on **Minimum** girth is secured by **grade** of **wire** and **degree** of **temper.** The **low** "Dillon" price with the **high** "Dillon" quality should complete the **sale.**

The "C" Brand

On a box of Horse Shoe Nails with our name, means to the purchaser that he shall receive the best, and "made in Canada."

Forty years is a long period of manufacturing experience in the production of Horse Nails. You get the benefit of it all, when you buy the "C" brand.

The best material known or used by any maker in the world for making Horse Nails, is Swedish charcoal steel nail rods. We use this exclusively.

The "C" brand nails will stand more hard work and outlast any "cold process" nail made in the world—bar none.

Don't compare prices, compare quality. The best costs the most to produce, and always sells for the best price.

No "Friday bargains" on the "C" brand. One quality—and one price for all.

Remember, that the recollection of the quality will remain long after the price has been forgotten.

Your orders and preference for the "C" brand respectfully solicited.

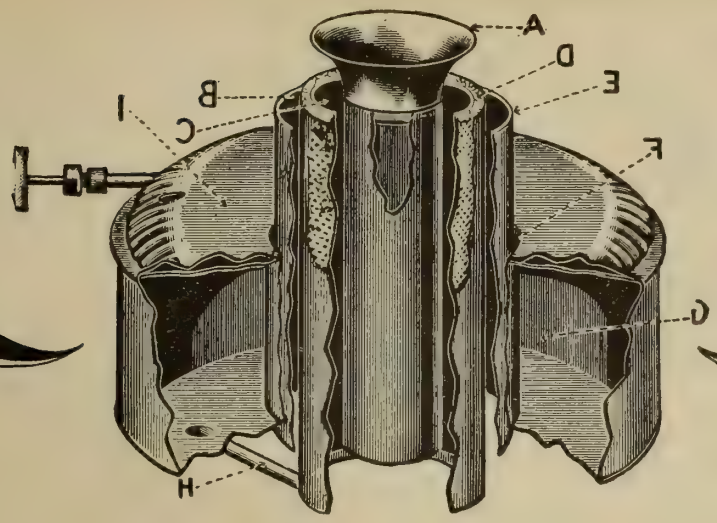
A SQUARE DEAL
FOR
Square Dealers

Square dealers, we take it, are those who try to give their customers goods that are "square" —honest all through. For forty years we have been giving all dealers the "square deal."

We make all the "ENTERPRISE" hardware specialties just as good as we know how—then we go out and tell the public of all the world about their merits. Square Dealers *distribute* them—they are already *sold*. Just ahead is the big demand for

"ENTERPRISE"

Meat and Food Choppers and "ENTERPRISE" Sausage Stuffers, Lard and Fruit Presses. They are being widely advertised now to the public. Write for our literature about them, including our new catalogue of all the "ENTERPRISE" specialties. Get ready for the biggest season you have ever seen on "ENTERPRISE" goods. We are ready. Get your share.



Increase your sale of "Enterprise" Meat and Food Choppers by using our new Booklet: "The Cook, Her Critic and—." We will send you a supply of these on request.

The Enterprise Manufacturing Co. of Pa.

THE ALUMINUM OIL HEATER

Sales Over the Million Mark

The only Oil Heater that is perfectly safe, because it alone has our grand Safety Burner. Look at it! No chance for explosion there. No chance for clogging up. No odor—no smoke. Every detail safe-guarded. Easy and simple to operate. Any child can take out and replace the wick.

It's the Safety Burner that makes the Aluminum Oil Heater a perfect heater. Note construction above :

A—Flame Spreader free from perforations, clogging up impossible. B—Air Space outside of Wick Tube. C—Air Space inside of Wick Tube. D—Wick. E—Outside Casing to Burner. F—Air Space between Fount and Outer Casing. G—Fount for oil, entirely separate from Burner, oil fed to Wick by small tube. H—Feed Pipe, conducting oil from Fount to Burner. I—Shield resting on top of Fount with Air Space underneath,

Radiates heat like a base burner from top, sides and bottom—and radiates a lot of heat, too.

You've had trouble with other oil heaters. Your customers complained of smoke and smell—trouble in re-wicking—couldn't keep it clean—so you had to send a man out to put it in shape—not only expensive to you, but probably lost a customer. None of this unpleasantness when you sell Aluminum Oil Heaters. They sell at sight and stay sold, because they meet all expectations.

Satisfies the buyer from beginning to end—and they are years apart.

Sells on sight and stays sold. We guarantee everyone.

Every one sold sells another.

BUTLER & JOHNSON, Syracuse, N.Y., write: "We have sold over 50,000 Aluminum Oil Heaters during the past ten years, and have not returned a single one for repairs or otherwise."

Dealers and jobbers all doubling last year's orders.

Join the multitude of **Best** dealers and sell Aluminum Oil Heaters.

We're making the prices that satisfy. But don't delay getting your order to us. A postal will bring you full and complete information by return mail.

Your Trade

REQUIRES THE VERY BEST

Our Best is not the Vaunted Best of Every Newcomer

IT IS THE EARNED RECORD OF MANY YEARS

THAT is a fair argument. Think it over. Why do the thousands of customers come back again and again for our rope and cordage?

The consumer is not going to try anything new when the brand he has always bought is better than it ever was. After all commerce is made up of satisfaction. There are two cardinal points about our business:

1st—The high standard of quality in cordage has won the trade to us.

2nd—**The maintenance of the Quality in the Goods** has held and increased our trade and it is only reasonable to believe that there will be a steady continuation.

THOMAS BLACK, 76-82 Lombard St., **Winnipeg, Man.**

Pat. in Canada, Aug. 22, '05.

The Important Point is the Adjustments

The price influences the sales and the sales influence the orders; but you will find that the Hinge Hangers which retail the best are the Hinge Hangers with the features, as well as the price.

THE WIZARD ADJUSTABLE

has both lateral and vertical adjustments. **No other flexible hanger has such features.** This fact alone places **The WIZARD Adjustable Hinge Hanger** in a class by itself, places it far above all other flexible hangers as regards being able to suit and likely to sell.

Are you going to benefit by the new invention or are you going to continue selling the featureless hangers?

The "**WIZARD**" is yours at a fair price.

Ask your Jobber about it—**NOW.**

BRADSTREET'S

Capital and Surplus, $1,500,000. **Offices Throughout the Civilized World.**

Executive Offices: Nos. 346 and 348 Broadway, New York City, U.S.A.

THE BRADSTREET COMPANY gathers information that reflects the financial condition and the controlling circumstances of every seeker o mercantile credit. Its business may be defined as of the merchants, by the merchants, for the merchants. In procuring, verifying and promulgating information no effort is spared, and no reasonable expense considered too great, that the results may justify its claim as an authority on all matters affecting commercial affairs and mercantile credit. Its offices and connections have been steadily extended, and it furnishes information concerning mercantile persons throughout the civilized world.

Subscriptions are based on the service furnished, and are available only by reputable wholesale, jobbing and manufacturing concerns, and by responsible and worthy financial, fiduciary and business corporations. Specific terms may be obtained by addressing the Company at any of its offices. Correspondence invited.

BOOKS FOR BUSINESS MEN

Business Short Cuts

The largest, the best, the most practical book of experts' short cuts ever published.

Contains much valuable information on:

Labor Saving Methods, Advertising, Loose-Leaf Ledger Devices, Checking Systems, Mathematical Short Cuts, Correspondence Helps, Card Systems, etc.

$1.00 Post Paid

Manufacturing Cost

By H. L. C. Hall

This book is a new departure in the way of a book on "cost accounting." In it you will find treated the principles of the science instead of a description of what some one else has done. Other people's systems do not interest you unless you can apply them to your own uses, hence only those which can be applied to your own needs are touched upon.

The Buyer, The Manager, The Superintendent, The Book-keeper, The Secretary, The Sales Agent and all those interested in knowing "what it costs" should secure a copy. Send for circular

Price, $3.00 Post Paid

Thorne's Twentieth Century Book-keeping and Business Practice

By W. W. Thorne

Mr. W. W. Thorne is the acknowledged leading authority on Book-keeping in the United States and Canada. The Ontario Government recently engaged Mr. Thorne to re-model the book-keeping system of the Province.

The Index

of this book contains over nine hundred references and is so arranged that any subject can be referred to instantly.

Some Subjects Treated

Accounts Receivable	Accounts Payable
Adjustments	Assets
Averaging Accounts	Bad Debts
Balance Sheet	Bond Accounts
Bank Accounting	Capital
Capital Stock	Card Ledgers
Cash Books	Cash Discounts
Checking Systems	Cost Accounts
Cross Entry	Distribution of Accounts
Depreciation	Double Entry
Expense	Installments
Interest	Journals
Ledgers	Merchandise Accounts
Etc.,	Etc.

If you are a book-keeper you cannot do without it.

If you are a business man it will be worth money to you.

SPEAR & JACKSON ETNA WORKS SHEFFIELD

Don't Stand in Your Own Light

YOU DON'T BELIEVE THAT THE RESULTS REPAY THE TROUBLE. THAT IS WHY YOU DON'T WRITE US ABOUT

MAXIMUM LIGHT GLASS

You say: "I believe there is merit in the article. Those statements about what the glass does could not be published if they were not true. But the question is: Will it pay me to give MAXIMUM LIGHT GLASS a portion of my attention?"

Cautious Hardwareman! **IT WILL PAY YOU.** Not so long ago a group of Hardwaremen, just as cautious, just as incredulous as you are, were tempted, through hearing of the rich results elsewhere, to make a Sales Test. Each one ordered a trial supply. They sold sufficient glass to place 8,300 windows in office buildings. That group of merchants are now regular buyers. They had no more energy or sagacity than you have; and no more luck came their way than comes any Hardwareman's way. They merely adapted themselves to conditions, kept their eyes open, and when the chances came seized them. Those chances are increasing every day, because building regulations are growing more rigid and because property owners are growing wiser. Is MAXIMUM LIGHT GLASS—the only absolutely successful daylight increasing system in the world—not worth an enquiry from you? You can get Samples and Booklet free of charge, even if you don't intend to buy just now.

WINDOW AND INTERIOR DISPLAYS

IMPORTANCE OF DISPLAY.

THE slogan of the moment is, and should be, that every department should push its business steadily forward. Business must not stand still. Everything should and must expand. If a department stands still its condition is anxiously and immediately looked into and the remedy applied, because the astute proprietor well knows that any department that comes to a sudden halt will not be long in descending the down grade.

Now, the decorating is a department in itself, and the trimmer is just as responsible for the conduct of its affairs as any other department in the building. He should closely scrutinize his expenses and see that the goods entrusted to him for display are not impaired in value while in his possession.

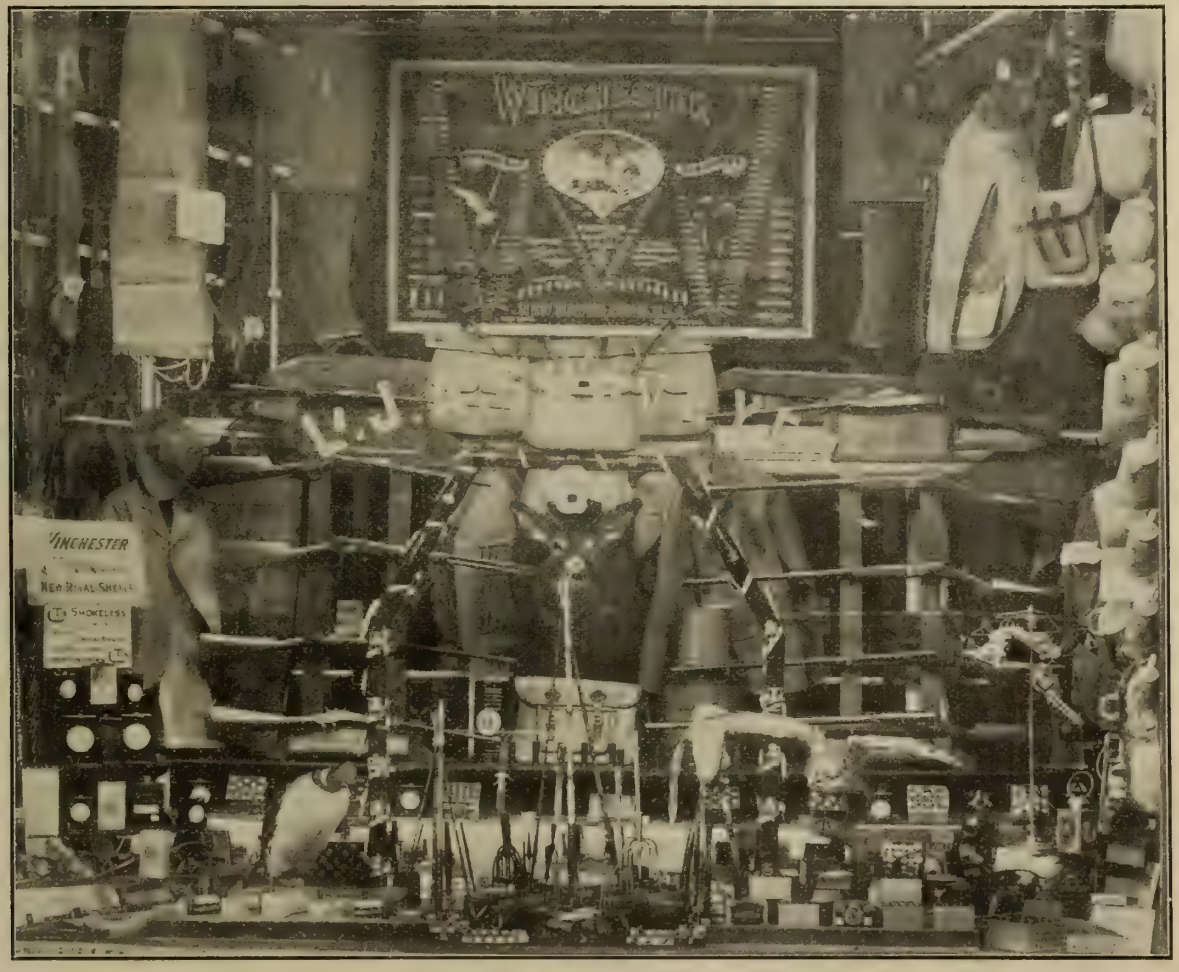
Novelty in Display.

Of all the elements that go to make a good window display, perhaps the most important is novelty. It is the trimmer with brains, originality, thought, and unique ideas who will be most successful in drawing the attention and coin of the realm to his establishment.

There are few trimmers who are blessed with a sufficiency of new ideas to run them for a year without at least a few thoughts that have been sprouted or originated by others. For this very reason the decorator and retailer should be on the alert for new ideas that can be revamped and turned to good account.

Don't forget that a hint may often be found in some other lines of business that can be advantageously adopted or slightly altered to ring in a telling and creditable display in your chosen line.

No good trimmer can afford to ignore a single suggestion that can in any way be turned to account. The cleverer you are the more you will appreciate and improve upon what you see. None of us are yet so bright as to know it all, and none of us do our work so perfectly and thorough that it cannot be bettered. Just when you think that your work is about perfect is the time when you are liable to run across the same work executed just a trifle better. That is exactly what excites emulation and acts as a spur to bring out the best that is in us.



Never rest satisfied with yourself and your best endeavors. Window trimming is like learning, there is so much ahead that we don't know that the little we do know seems so puny, insignificant and small that it ought to keep us humble.

Aim at Results.

Methods are many, designs differ, ideas vary, windows are architecturally different, and stocks never alike. Yet the aim of every trimmer should be the same—to excite in the mind of the public a desire for possession of the goods displayed.

It may not be generally known that the word "advertise" means literally to "turn to." Therefore your displays should be original and attractive enough to cause the passer-by "to turn to" them. In other words, they should be designed primarily to catch the eye of the passer-by.

The next desideratum is that the display be of such a nature as to induce a

Sporting Goods Window Shown by L. J. A. Surveyer, Montreal.

generous percentage of the gazers to enter the store and become purchasers.

In order to get best results severe extremes must be avoided. For instance, a display that is simply beautiful to look upon without pushing home some salient point or argument to the possible buyer is not apt to accomplish much.

A window may be very beautiful, may even stop people in crowds, and not sell a dollar's worth of merchandise. That may be good window dressing, but it is bad business from a business point of view, and it is business that most people are after, not simply glory.

Give First Attention.

Usually a salesman, the brightest and most inventive of the store's personnel, is selected or commissioned to "dress the windows." But he is so burdened with other duties, expected to sell as many goods, and have as large a book at the day's end as those whose duties are only to handle customers, that he cannot possibly do both satisfactorily. This is manifestly unfair, and we believe one of the principal reasons why so many windows are neglected and unattractive. He is first of all a clerk in the eyes of his employer, and being a clerk he is expected to give foremost attention to "clerking," as our rural friends and brothers term it. Decorating, if his trimming duties may be dignified by the word, is a side issue with him. Not because of any desire on his part to make it so, but because his employer insists upon regulating his duties in such a manner that he cannot alter them.

It is false economy, impolitic, passe, weak-kneed and limpy to make the decorations the secondary part of the decorator's duties, and the number of stores that are backward and only semi-profitable in consequence thereof are legion.

Interior Correspondence.

We would like to see more of our merchants awake from their lethargic slumbers and infuse life, energy and system into their business. Many great stores grow from small beginnings, but they must be watched over with an acute sense of the management which fertilizes and promotes, that they may grow to be big and sturdy, and stand as fitting monuments to the industry, perseverance and "get up" of the men who planted them.

The chief fertilizer should be system and prominent display. Magnetic windows assist in getting people through the portals; the decorations on every side should then make the interior enjoyable to your visitors. No little store will ever become great, and big, and powerful, if a niggardly hand is at the rudder.

The general hospital committee of Port Arthur has purchased a site and will erect a hospital in the Spring.

A FINE SPORTING GOODS WINDOW

An illustration of one of the most attractive windows seen in Montreal for some time will be found on page 19. It represents the sporting goods display of L. J. A. Surveyer, the St. Lawrence street hardware merchant.

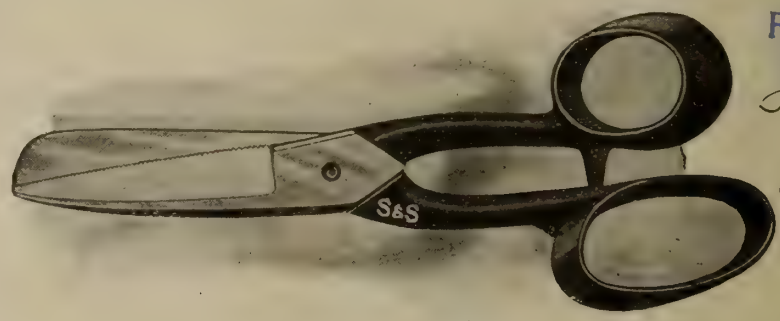
It is safe to say that a sporting goods window will always attract general attention, if prepared with ordinary taste. The public always seems to be interested in this class of goods.

Consequently there is much to recommend such a window even at first sight, and this coupled with Mr. Surveyer's well known ingenuity as a window dresser, has produced the result here shown.

FLEXIBLE FLYER SLED NO. 6.

S. L. Allen & Co., 1107 Market street, Philadelphia, Pa., have this year increased their line of Flexible Flyer Sleds by adding the one which we present in the illustration herewith. They previously made but five sizes of this sled, but the one exhibited is designed to carry six adults and is intended to compete especially with double runners or bob sleds. It is mentioned by the makers as being particularly fast but especially strong and light. The No. 6 is 101 inches in length, 8¾ inches high, 16 inches wide and weighs 41 pounds. It is steered in the same style as the other sizes of these sleds, without touching the feet to the snow or ice.

Flexible Flyer Sled No. 6.



S. AND S. COGGED SCISSORS.

THE scissors here illustrated are of a most interesting character inasmuch as they are designed to cut leather, rubber, packing, linoleum, asbestos, and similar material as easily as paper.

It will be noticed that the lower blade is equipued with cogs or teeth, which hold the leather or other material in place while it is being cut. The upper blade is of finely tempered steel, and is sharp enough to go through any thickness of leather belting with the greatest ease.

The scissors have been found to be very serviceable in a number of manufacturing plants, where leather belting is used for transmission purposes. They also possess fine lasting qualities, as is attested by the fact that one Montreal firm have been using a pair of these scissors for over two years, with no apparent effect upon their efficiency.

Schuchardt & Schutte, New York, who are the manufacturers of this article, as well as many other hardware specialties, have recently appointed as their Canadian agents McLean & Sophus, 301 St. James street, Montreal. This firm is anxious to appoint agents throughout the country to handle Schuchardt & Schutte's specialties, and will be pleased to correspond with interested parties. Kindly mention Hardware and Metal in writing.

S. & S. Cogged Scissors.

NEW STORE AT STRATHCLAIR.

About a month ago Geo. Manson opened his new general store in the town of Strathclair, Man., with a stock of groceries and dry goods. He has a very attractive store with a floor space of 35 by 65 with two large glass fronts. The interior is finished in cherry with hardwood floor, oak counters and metallic ceiling painted white. He has put in a system of high pressure gasoline lamps and in fact every modern facility for do-

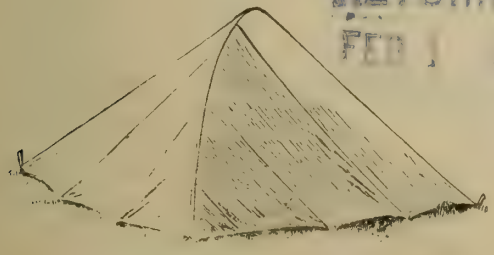
ing business is found in this store. Mr. Manson's efforts met with such great success that he is now branching out into the hardware business, having secured the store next door, and is having it completely remodelled. It will be open about the first of November with an entirely new stock and will be in charge of D. Manson, who has had considerable experience in that line.



A NEW PORTABLE TENT.

IN the march of progress of the manufacturers the evolution of the tent has been, until the past few years, comparatively slow. We, however, have noted a number of improvements

Tent Pegged and in Position.

for the benefit of campers in this particular line. The latest to be brought to our notice is the V.X.L. portable tent, manufactured by F. H. Gotsche, of 416 Hoffman avenue, San Francisco, Cal., who claims that his new invention

Tent Ready for Occupancy.

is an improvement over all others for the reason that it will resist the wind, is easier to carry and can be erected without much trouble. Another advantage for it is that it can be erected so that it is a tent within a tent, using a larger one over it, thereby leaving a sufficient space between the two tents to keep out the hot air and resist heavy rains or storms. The Canadian agents for this tent are Messrs. Rochussen & Collis, Victoria, B.C.

MADE MONEY ON THE TRADE.

A CUSTOMER purchased a dozen of a certain article in a Brooklyn hardware store. At the end of a month he found that he would need only one. With doubt in his mind as to his reception he bundled the eleven up and called at the store. "Of course we will take them back," said the salesman. "Thank you. I was wondering as to what I had better take in place of them. Can't think just at the moment as to what I need." "You do not need to take them out in trade," said the salesman. "We are perfectly willing to give you the cash." "I hardly feel like asking that," was the response, "but it would be an accommodation." The salesman figured a moment, went away, and came back with the money. When the other man received it he counted it over and said: "Hold on, you have made a mistake!" "I guess not," said the salesman. "Yes, you have given me too much." "Oh, no," said the dealer. "That is just what the goods are worth to-day. You see, the price has gone up, and it is only fair that you should receive the benefit." The customer went away musing. And it is safe to say that on the next occasion when he needs hardware he will go back to that store.

Make the Most of Your Paint Business

THERE'S opportunity for steady trade and larger profits for you in selling ***Sherwin-Williams Buggy Paint*** and ***Sherwin-Williams Enamel Leather Dressing.*** We want wide-awake agents everywhere to push these goods and take advantage of the plan we have for increasing their use among livery stables, repair shops, and all owners of vehicles.

For steady, year in and year out sales there are no better paint specialties made than ***Sherwin-Williams Buggy Paint*** and ***Sherwin-Williams Enamel Leather Dressing.***

The former has the toughness, high gloss and permanency of color that make it especially adaptable and popular for refinishing buggies, wagons, boats, and similar surfaces exposed to the weather; while the latter is unexcelled for refinishing carriage tops, curtains, etc.

There is a demand all around you for these goods. Write our nearest office today for our special proposition

Adjustable Drill Attachment.

ADJUSTABLE DRILL ATTACHMENT

EMMERT MFG. Co., Waynesboro, Pa., represented in Canada by the Canadian Fairbanks Co., are offering an adjustable drill attachment with bracket of improved form for holding the drill, as shown in the cut. The bracket can be attached at any point along the side or end of a bench and is adjustable in any position or height. The drill can be used with any kind of vise, but is here shown in connection with one of the company's Universal vises. Twist drills from 1-16 to ⅝ inch may be used in the device, but are not supplied with the attachment.

The Bemis Bag Co., of St. Louis, have purchased a site for a factory in Winnipeg, and will instal a large amount of machinery.

CATALOGUES, BOOKLETS, ETC.

When sending catalogues for review, manufacturers would confer a favor by pointing out the new articles that they contain. It would assist the editor in writing the review.

PAGE-HERSEY IRON & TUBE CO., Guelph, have issued a valuable booklet of 44 pages, well bound in an elaborate cover. The reading matter contained in the book shows the different lines of pipe manufactured by the company. The Page-Hersey plant at Guelph has been in operation over two years, during which time several additions and improvements have been made, the most important being the establishment of modern galvanizing and a large pipe department. Various illustrations of piping, nipples, couplings, etc., are given in addition to tables giving dimensions, prices, etc., of the different goods manufactured, another feature of the book being the reproduction of many testimonial letters sent to the company by users of their material. Any reader of Hardware and Metal who mentions the paper can secure a copy of the catalogue.

Mechanics' Fine Tools.

The Athol Machine Co., Athol, Mass., have sent Hardware and Metal a copy of their catalogue illustrating the different styled tools manufactured by them. The book is of one hundred and eight pages and cover, of compact size and exceedingly well illustrated, below each cut appearing tables giving prices for the various sizes of tools and machines listed. This valuable little book can be secured by any reader of Hardware and Metal on request.

Walker's Cork Screws.

Walker's Self-Pulling Cork Screws are being presented to the trade as good holiday souvenirs and large sellers during the whole year by the Erie Specialty Co., Erie, Pa. A large sheet showing illustrations of about a dozen types of the Walker goods is being mailed to the trade, the sheet containing an offer that with each half gross a beautiful display stand will be given the dealer. The company also offer to send illustrated catalogues and discount sheets to any inquirer who mentions having seen the offer in this paper.

Builders' Hardware.

The Coleman Hardware Co., Chicago, Ill., have issued catalogue No. 9 describing the builders' and cabinet hardware manufactured by them. The thirty-six pages contain many illustrations of types of casters, caster rings, ceiling hooks, chest handles, barn door hangers, hinges, pulleys, shelf supports, etc., prices of the different lines also being given. The catalogue is well gotten up and will be sent to any reader of Hardware and Metal on request.

Auto Lock Clasps.

Price lists of the Auto-Lock Clasp Co., Buffalo, N.Y., have been received. The sheets contain many illustrations showing the workings of the lock clasp, which has undoubtedly great merit as a fastener for tents, canopies, awnings, covers and all canvas goods. The sheets will be sent to any user of these goods if the name of this paper is mentioned in a letter of inquiry.

IT IS SAFE

LOOK HERE

for the SAFETY LEVER

The hammer cannot hit the firing pin or the cartridge. *When you pull the trigger* (only) this lever rises and carries the blow to the firing pin.

New York Office: 99 Chambers St.

As safe in the home as a kitchen table and just as important. You *may* be so fortunate as to never need the services of a revolver to defend your life, property and the lives of those depending on your protection, but you can't tell—no one of the hundreds robbed and murdered every year suspected that he or she would be the next.

IVER JOHNSON REVOLVERS

are made for your protection—*in every way*. The "Iver Johnson" is the original safety revolver, and the only one with a safety mechanism worthy the name.

Hammer **$6.50**; Hammerless, **$7.80**. For sale by all Hardware and Sporting Goods dealers. Learn about them, anyway—it costs you nothing. If you will ask for it, we will gladly send you our bright little booklet, 'Shots," together with our handsome catalogue.

IVER JOHNSON'S ARMS AND CYCLE WORKS, FITCHBURG, MASS.

Pure Water and Pure Air.

Under this caption an interesting little booklet is issued by the J. W. Harris Co., Limited, Montreal. The first part of the publication is devoted to an illustrated description of the Harris Filter, which is said to make bright and wholesome the ordinary turbid and impure city water. Then follows twenty-five pages of reading matter dealing with the Aeolian and Zephyr Ventilators manufactured by this company, including testimonials from several who have tried this method of procuring pure air. Finally, the Harris Expansion Conductor Pipe, which, it is claimed, will not burst by frost, comes in for a share of attention. Altogether, the booklet is well worth having, especially as the Harris Co. will be pleased to send it to any interested person mentioning this paper.

Electrical Accessories.

Sheets illustrating and describing the products of the Pioneer Electrical Works, Liverpool Road, London, England, have been received by Hardware and Metal and will be forwarded to any reader who handles these goods. The lines given special attention on the sheets are armored plugs, switches, pivot combinations, etc.

For Heating, Cooking, Lighting.

Reineke, Wilson Company, Pittsburg, Pa., manufacture natural gas appliances for heating, cooking and lighting, and carry a large stock to promptly supply the trade. This company, known as makers of good gas goods, does a very large business and is widely known for progressive methods and furnishing that which draws trade and makes business. The trade is invited to ask for catalogues, furnishing full particulars concerning all of the goods made. Mention Hardware and Metal.

SEEING BY TELEPHONE.

"How well you're looking this morning!" says the facetious man in telephonic greeting to his friend a hundred miles away. Mr. J. B. Fowler, of Portland, Oregon, has taken the nub out of this joke by inventing an apparatus by which images displayed before a lens at one end of a telephone wire are projected upon a screen at the other end. Mr. Fowler invites his visitors to talk with his daughter. They place the telephone transmitter to the ear, apply the eye to an aperture in the telephone box, and see the young woman in miniature speaking 5,000 feet away. Mr. Fowler is preparing now to show a train in motion in his invention. He has no doubt of its commercial practicability, and declares that within a few years it will be in operation throughout the country. For some it may be a boon. For others it will be a curse. Who has not telephoned when he wanted to avoid a face-to-face interview? What will frisky husbands "detained at the office" say to a machine that shows to suspicious wives the chips that pass in the night? Mr. Fowler may not be a public benefactor after all.—Everybody's Magazine.

STOVES AND TINWARE

THE PROPOSED TIN INDUSTRY.

IS the project of attempting to manufacture tin plates in Canada at the present time a practical one? In order to answer this question it is not only necessary to weigh the matter carefully as it affects all the conditions in Canada, but also to consider the history of the tin plate industry in the United States.

The home of the tin plate industry is in Wales, which country is admirably adapted for its production, having nearly all the necessary baser products which go into the article in close proximity, and with excellent transportation facilities, the works in many cases being upon the seaboard. The principal countries to which exports are made from Great Britain are: Germany, Holland, Belgium, Russia, France, Australia, India, Canada and the United States. No country in the world is able to compete with the Welsh makers, except under the advantage derived from extremely high protection.

A fair illustration may be found in the history of the tin plate industry in the United States. Long before the industry was first established in the United States that country had developed the heavier and baser products of iron and steel, which at the present time are not produced in Canada, with the exception of steel rails. This industry is just now being started.

The total amount of finished rolled iron produced in the United States, exclusive of hammered or forged products, was 2,038,948 gross tons in 1886.

The production of steel rails in the United States was 1,305,212 gross tons in 1880, 1,885,307 gross tons in 1890, and 2,385,682 gross tons in 1900.

The production of iron and steel structural shapes in the United States was 453,957 gross tons in 1892, and 1,300,326 gross tons in 1902.

The production of iron and steel wire rods in the United States was 279,769 gross tons in 1888, 536,607 gross tons in 1891 and 1,699,028 gross tons in 1904.

Although this is not a complete list of the various kinds of rolled iron and steel which were produced, it serves to illustrate to what extent the industry had been developed in the United States previous to 1891, when it was decided to put a protective tariff on tin plates to the extent of upwards of 80 per cent. ad valorem. Let us see what the situation is in Canada at the present time.

With the exception of steel rails, which we have just commenced to produce, our production is practically nil in respect to these commodities. The following is a list of some of the importations into Canada for the fiscal year ending 30th June, 1905, of the heavier or baser products of steel which are not at present being produced in this country. In fact, it may be said that no concern is prepared to produce these, with the exception of steel rails, which commodity is of only recent development. The list includes some classes of iron and steel imported into Canada during the year ending 30th June, 1905, which are subject to a protective duty:

	General Tariff.	1905.
Bar Iron or Steel, n.o.p.	$7 per ton	$ 875 067
Iron or Steel Ingots	$2 "	319,665
Bridges and parts of	35 p.c.	719,284
Railway Bars, n.e.s.	30 "	421,084
Railway Fish Plates	$8 per ton	176,002
Rolled Angles, Beams, etc. n.e.s.	10 p.c.	1,380,841
Rolled Hoop, Band, etc., n.e.s.	$7 per ton	98,889
Rolled Angles, Beams, etc., n.o.p. less than 35 lbs per yd.	$7 per ton	385,997
Rolled Plates & Sheets, n e s.	$7 "	28 ,239
Rolled Plates & Sheets, n.o.p.	10 p c.	640,776
Steel Bridge Plates	10 "	407,380
Iron or Steel Rods for making coil wire	Free	792,078
Steel Rails	"	5 0 1,702

It will also be noted that the article of rails for electric tramways is not being produced in thir country, large orders only recently going to the United States. Therefore we are producing little or nothing in most of the heavier grades of steel products, the development of which in the United States had reached the maximum at a time when it was thought in the interests of the country the tin plate industry should be fostered.

In other words, we are not producing structural steel, angles, beams, girders, channels, ship plates, tank plates, bridge material, and many other lines, the manufacture of which it has been the endeavor of the country to foster for many years past.

EXTENSION TO FACTORY.

IN order to keep pace with their rapidly increasing business, the Thos. Davidson Mfg. Co. have found it necessary to extend their already large works both at Montreal and Winnipeg.

Their Montreal plant, which is situated at the corner of Albert and Dominion streets, Ste. Cunegonde, is being greatly enlarged by the addition of a fine four-storey brick wing, 220 feet long by 50 feet wide.

At the west end of the new wing, an engine room 45 x 50 feet is being equipped to contain two large engines, while, close at hand, a huge concrete tank, with a capacity of 105,000 gallons, will afford a great addition to the factory's water supply. At the east end is situated a fire-proof tower, in which the stairs and elevators will be constructed, while space is also provided for the bookkeeper's office and vaults, and storage for dies, patterns and tools.

The feature of the new addition is the splendid stamping shop, which occupies the basement for its entire length. This has been pronounced by experts to be among the finest stamping shops on the American continent. The ceiling of this room is twenty-five feet high. A kind of shelf, one-third the width of the wing, runs along one storey above the stamping shop, and on this shelf the machine shop will be located. Here all the lathes and other machines will be set up.

The whole building is constructed on the most solid lines, and all floors are four or five inches thick, surmounted by one inch of hardwood.

A new concrete tunnel six feet and a half by four feet and a half, covering automatic conveyors, runs across Albert street, connecting the stamping shop and enamel shop.

This addition will increase the capacity of the Thos. Davidson Mfg. Co. by nearly 25 per cent., and this enterprising firm have every reason to feel proud of their efforts to keep up with the growth of the country.

STOVE SALESMEN.

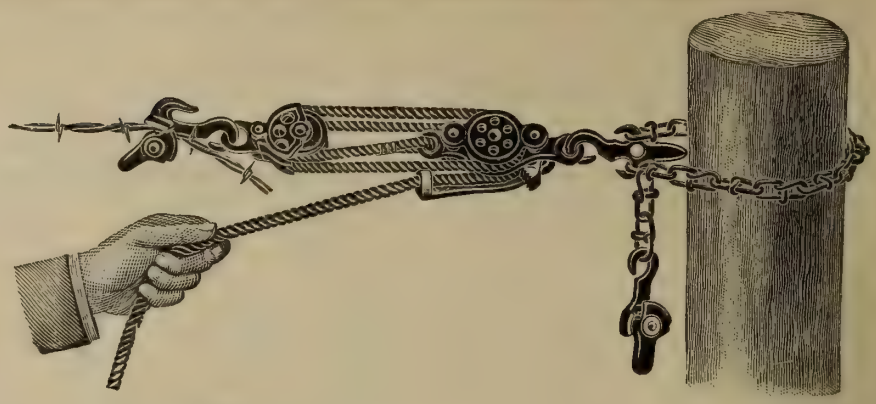
"ONE of the most essential things is for a salesman to think well of, and have confidence in himself. Now, the best way to elevate yourself, in your own estimation, as well as in others, is to devote a reasonable amount of time and attention to your personal appearance.

"The salesman who patronizes a good laundry, uses his razor, clothes brush and shoe brush freely, is in keeping with the high grade goods he claims to be selling. It is uphill business for a slouchy, cheap-looking salesman to sell high-grade goods for a profit.

"If you invite some friends out home for a little dinner, or a card party, don't you generally hurry home to wash your face and brush up a bit? Now if you will go to that much trouble to make a good impression upon your friends, who are going to burn your gas and increase your bill at the grocery, why not spend a little time in preparing to make a good impression upon the people who visit the store and make it possible for you to live in a steam-heated flat.

"Much depends upon the reception given a prospective purchaser, when he or she enters the store. The first impression is generally lasting. If, in order to do a profitable business, it is necessary to have a clean, light store, a complete and well selected stock of goods, nicely dressed show windows and the most attractive advertising that it is possible to get up, why is it not equally important to have clean, neatly dressed, courteous salesmen? Why shouldn't a salesman give a prospective purchaser the same cordial reception in the store that they would receive in his own home?

"Were you ever invited to a strange place where you received a chilly reception, when you really expected to be shown special attention? You didn't have much of a desire to pay your party call, did you? Now, let's apply this to your business. Suppose your house comes out next Monday with a nice big ad announcing a special sale, and extends everyone a cordial invitation to call, and when a lady comes in and asks for some article advertised at an extremely low price the salesman looks disgusted, but finally condescends to show it in an unconcerned way. He not only renders the ad worthless, but he drives away what might have been made a good customer had he taken an interest in the special and then shown her some new goods that had just been received in another department, etc.



"Do you know how much it costs to bring a prospective customer into the store? If you don't, get the advertising man to figure it out for you, and

HOLLOW-WARE

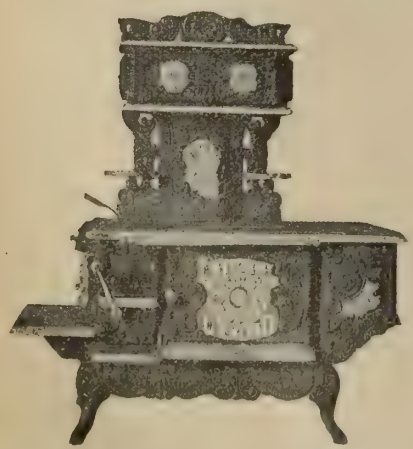
PRESSED, STAMPED, and MACHINE-MADE

ENAMELLED, TINNED, GALVANIZED and JAPANNED

We manufacture every description of Hollow-ware and we guarantee that every piece is made wholly on our own premises. Our average weekly capacity, is over 700,000 pieces, of Tinned, Galvanized and Enamelled ware. Our Enamelled ware is of superior durability and finish, and is guaranteed free from any poisonous substances.

Let us have your name for our Illustrated lists

The Welsh Tinplate & Metal Stamping Co., Ltd.



LLANELLY, WALES

The Shrewd Dealer

allows a good many feet of floor space to the **IMPERIAL OXFORD RANGE** because its many points of superiority are so apparent that it practically sells itself.

The lavish, yet judicious use of nickel plate attracts the eye of the particular housekeeper at once, and she realizes that the Imperial Oxford will be easily kept clean.

The oven is the most important factor of any range. The diffusive oven flue is exclusive to the Imperial Oxford, and by far the most effective practical improvement ever made in oven construction. The economy and satisfactory results obtained by this flue need only to be explained to sell

The Imperial Oxford Range

The Imperial Oxford has many other selling points—the patent draw-out duplex grate—the perfect arrangement of draught dampers and flues—the accurate oven thermometer and the perfectly proportioned fire-box.

You should do your share of the high-class range trade—the trade that pays.

Forty thousand Imperial Oxfords are in use to-day in Canada.

The Imperial Oxford is the range the people want because it has been and is being well advertised.

We help the dealer all we can. ***SEND FOR CATALOGUE 61.***

Can you supply the demand?

WE also manufacture Cast Iron and Steel Plate Ranges, Gas Stoves, Ranges and Heaters, Hotel Ranges, Warm Air Furnaces and all kinds of cooking and heating apparatus, Plumbers' Supplies.

The Gurney-Massey Co., Limited, Montreal, Que. The Gurney Standard Metal Co., Limited, Calgary, Alta.

then you will appreciate the importance of showing them where to sign while they are there.

"When advertising has created a desire and induced a prospective purchaser to cross your doorsill it is then up to you, and advertising starts out after another one.

"Some salesmen, by their manner and talk, give a customer the impression that they are selling goods simply to make a profit and a good showing with the house. Others make customers feel that their only desire is to please them, no matter if it only amounts to ten cents. The salesman who can take an interest in the sale of a lamp chimney, or a bottle of furniture polish, will have no trouble in selling large bills, and will invariably have someone waiting for him when he is finished with a customer.

"Did you ever notice in a barber shop that one barber has from two to three men waiting for him, when others have nothing to do? If you will watch that barber you will find he takes his time and makes every man feel that he is receiving special attention. His razor is sharp; he puts four or five hot towels on your face when he is only supposed to use two. If you will make a further investigation you will find that this same barber spends his leisure moments stropping his razor instead of reading the Police Gazette.

"Do you know I think that we all spend too much time sitting around the front door talking about the Japanese and Russian War, or how tight the lid is on in St. Louis, when we should be writing Mrs. Jones a follow-up letter, enclosing a booklet giving the reasons why she should buy the steel range we failed to sell her yesterday."—J. T. Templeton, of the Buck Stove Co., St. Louis, Mo.

SYSTEMATIC STOVE ADVERTISING.

STOVE advertisements have been reviewed a good deal in this department. Faults have been found with some dealers' style of advertising and praise has been given to others. To make the department really profitable it is necessary that some policy be outlined whereby stove dealers may avoid certain errors in stove advertising and adopt what are considered trade-winning methods.

* * *

I think that sometimes dealers advertise stoves too often, considering the fact that perhaps in the same paper the manufacturers are advertising the same stoves so as to work up the trade for the dealers.

* * *

Such space might occasionally be more profitably devoted to general hardware and plumbing, and the expenses of the advertising divided over a greater number of lines.

* * *

The majority of dealers also give too much attention to illustrations—that is, have them appear in their advertisements too frequently. It is well-nigh impossible to get a satisfactory reproduction of a stove on the class of paper used in dailies and weeklies. Why, then, bother with poor reproductions?

* * *

About two-thirds of the stove advertisements I come across have illustrations in them—all sizes, all grades. In many cases the effect is just so much "black," resembling a silhouette. I do not remember having seen many stove advertisements where the illustrations impressed me as being of much benefit to the buyer.

* *

The dealer should size up the case and realize that he is advertising, not to make use of some cuts, but to sell stoves. The stoves that he has for sale are usually pretty well known by the people. It is the policy of the manufacturer to make them known.

* * *

Thus it will be seen that a retailer's stove advertisement needs no illustration—at least, no big illustration and assuredly no poor illustration. Neither does it need lengthy descriptions. Far better is it for the dealer to enumerate just sufficient details to awaken interest and then to clothe the advertisement with reasons why stoves should be bought from him.

* * *

Stove advertising is a branch of publicity that ought to be approached cautiously. In the first place, stoves are not what can be called everyday commodities. In the second place there are not a greater number of people changing their old stoves for new ones. The chances for trade rest largely with two classes of people—the newly-married and new residents in the town. So stove advertising should always be particular in wording and attractive in design.

* * *

As prices sound high on paper it is better to omit them, except in special cases. The dealer has to please the woman as regards the stove, but the man as regards the price. Getting the price in the store, when the stove has been examined and the points explained, is quite different to looking at a poor illustration and a big price on paper.

* * *

A dealer should consider the above points before he pays for a line of advertising. He should size up pretty well the community in which he lives, his chances for stove business and know the prices likely to be paid. After doing this the dealer can advertise—if it is necessary to advertise.

* * *

I shall reproduce in this department at another time one or two samples of my own conception of what a retailer's stove advertisement ought to be.

* * *

Bridge Bros., Thessalon, Ont., forward for review some first rate examples of stove and hardware advertising. They use space liberally in their local paper, but to good advantage.

* * *

While I do not just agree with the whole makeup of their advertisements they certainly evince knowledge of the subjects on the part of the writer, besides care and system in the preparation.

* * *

"Hardware News" is especially good in the fact that the buyer is given a variety of stoves to choose from and because order characterizes the arrangement. The cuts used stand out extra well for newspaper print. Bridge Bros. are to be commended on their splendid showing and striking enterprise.

A. A. B.

ALUMINUM OIL HEATERS.

AN oil heater which is winning favor is the Aluminum Oil Heater, manufactured by the Metal Stamping Co., Jackson, Mich, U.S.A.

It is the inside of a watch that is vital, and it is the same with an oil heater—the burner is the very soul of the heater, and the success in heating and safety depends altogether upon the burner. The safety burner used in the aluminum oil heater has many liberal air passages which render perfect combustion. The flame spreader is solid; there are no perforations to clog up and smell. The wick does not enter the oil fount, and so thorough is the combustion that a partition or deflector is placed about in the centre of the drum or barrel of the heater, that is, midway between the flame and top, just like a damper in the stove pipe. By reason of this deflector the heat is thrown downwards, and thus the aluminum oil heater radiates heat just like a base burner, from top, sides and bottom.

Probably no stronger testimony as to the practical merit of the aluminum oil heater can be given than that by Messrs. Butler & Johnson, the large wholesale stove dealers of Syracuse, N.Y., who say: "During the past ten years we have sold over 50,000 of your Aluminum oil heaters, and in that time have never returned one for repairs or otherwise."

The operating and wicking process of the aluminum oil heater is so simple that a child understands it and the heater is a success from the start. Write the Metal Stamping Co., Jackson, Mich., U.S.A., for a catalogue and descriptive information, giving the name of this paper, and the matter will be mailed promptly.

GURNEY COMPANY WINS.

That a moulder is worth twice his wages to his firm was the contention made by Mr. Stewart, of the Gurney Foundry Co., in connection with the action brought by that company against the Western Foundry Co., of Wingham, in which the official referee, Mr. J. S. Cartwright, has delivered judgment. In 1903 both foundries were embarrassed by a strike in their moulding shops, and the Wingham people are said to have induced several of the Gurney Co.'s moulders, who were under contract, to desert to them. To recover for losses thus sustained the Toronto firm brought an action for $15,000 damages. The referee finds rather strongly in favor of the plaintiffs on the evidence, and awards them $2,000 damages. The case will be appealed.

THE WALKER OAK

In three sizes
14, 16 and 18 inches

In four styles
Straight for wood
Straight for coal
With Hot Blast for soft coal
With magazine for hard coal

The Walker Oak is throroughly new and up-to-date. Is the strongest heater of its size in Canada.

NEW ADVERTISEMENTS.

Thos. Pink, Pembroke, Ont.
Frederick Fenner & Co., Limited, London, Eng.

HARDWARE SPECIALTIES.

EVERY year sees new lines added to hardware stocks, the time having long since passed when the hardware merchant sells nothing but hardware. The modern merchant must keep abreast of the times, and not be afraid of the criticism of the old fogies who may say "that is a queer business for a hardware store to be engaged in."

A few years ago hardware dealers dealt only in staples and heavy hardware, and it was considered putting on style to wash the windows very often or have a clean up oftener than once a year. Nowadays the successful merchant makes his store attractive and cleanly. Handsome showcases and boxes are installed to keep the stock orderly and show samples in an attractive manner.

But the change has not been altogether in the stores. The merchant advertises more intelligently and his clerks study salesmanship scientifically. Side lines of innumerable varieties are stocked and the hardware store becomes, in fact, a "home furnishing" supply house —a resort for the housewife as well as the mechanic.

Sewing machines are one of the best lines which hardware merchants have taken up in recent years. The line naturally belongs to the hardware store, but it has been left to the traveling agents too much. Sewing machines are as much a requirement in the average household as the kitchen range, and the dealer who puts as much energy into selling machines as he does into stoves is almost certain to meet with as good results. Unlike stoves, sewing machines are seasonable at all times, and the profit on the good makes is large enough to pay good margins.

There is, probably, no better side line, however, than sporting goods. Rifles, shotguns, ammunition, fishing tackle, skates, etc., are now recognized as strictly hardware lines, but sleds, hockey sticks and gymnasium supplies are too often left for the bookseller or some other enterprising merchant to handle. To be successful in selling sporting goods the dealer should be a sportsman in the widest sense, as his association with users of the goods will be of great advantage in working up and holding the trade.

Silverware is becoming almost as much a hardware line as cutlery, and the dealer who stocks hollowware as well as flat and plated goods is able to handle the holiday trade and secure a larger share of Christmas business than the one who stays in the rut and merely carries the lines his father carried in stock before him. The holiday season will soon be upon us, and the wise dealer has already prepared for a large trade in some of the side lines referred to.

CONVENTION AT WASHINGTON.

A COMMITTEE composed of Messrs. Wm. Vallance, of Wood, Vallance & Co., Hamilton, president of Canadian Wholesale Hardware Association; T. H. Newman, of Caverhill, Learmont & Co., Montreal, vice-president; James Hardy, of Jenkins & Hardy, Toronto, secretary-treasurer; Thomas Dexter, of H. S. Howland, Son & Co., Toronto; Wm. Starke, of Starke Hardware Co., Montreal; Cyrus Birge, of Canada Screw Co., Hamilton; T. B. Lee, of Rice Lewis & Son, Toronto, are attending the annual convention of the National Hardware Association, the hardware manufacturers of the United States also meeting at the same time.

The Canadian delegates are permitted to participate fully in the doings of the convention, and as their sources of supply are largely the same as the American dealers, the benefits of association are of great value to the trade in Canada.

A report of the meeting will be given in the next issue of Hardware and Metal, which is represented at the convention by Mr. H. T. Hunter. The catalogue house and parcels post questions are the main topics under discussion.

THE MORRISBURG TIN MILLS.

RECENT issues of Hardware and Metal have contained articles showing the absurdity of the proposed establishment of tin plate mills at Morrisburg. The scheme was criticized from various standpoints, but the promoters have made no reply to the points raised in our articles. The objections to the proposition might be summarized as follows:

1. The location of Morrisburg is not a favorable one, the town being remote from the source of supply of raw material, is not near coal mines or already developed steel works and, in fact, has practically nothing to recommend itself as a manufacturing site for such an industry.

2. The records of the promoters are not such as to encourage the investment of capital in enterprises promoted by them. The principal promoters were largely interested in the defunct Cramp steel works at Collingwood, a poor namesake of the wealthy Philadelphia shipbuilders lending his name to that ill-fated enterprise and many investments being made as a result of this trick.

3. The time is not yet ripe for a tin plate industry in Canada. A heavy duty of nearly 100 per cent. would be required to make the proposed plant profitable and this duty would bear heavily on the canning industry and all other users of tin in Canada, the only ones to be benefited being the few stockholders in the tin plate company in the event of its success.

In another column another phase of the matter is discussed, it being pointed out that it is necessary to develop other classes of the metal manufacturing industry in Canada before a tin plate industry can hope to be successful. The history of the metal industries of the United States are referred to in illustrating how, despite high duties and bounties in many cases, importations still continue.

In view of the fact that some construction work is being done at Morrisburg and investors are being asked to finance the enterprise hardware merchants, who are interested in the continuation of low prices for tin products, should bring the matter before their parliamentary representatives as well as before the Tariff Commission during its sittings in various parts of Eastern Canada. The columns of Hardware and Metal are open for a discussion on this question.

THE PHILOSOPHY OF DISCOUNTS.

In his eagerness to buy at the best possible rates the dealer should never lose sight of the quality of the goods or their reputation with the public when the question of discounts is considered. How often the traveling man is told: "I can't very well handle your line. You see you allow only a discount of 25 per cent., while Messrs So-and-So have offered me 40 per cent." Often the dealer says this in a decisive, matter-of-fact way as if quality or salability were no considerations whatever. Quite likely the article on which the lower discount is offered is a standard article of proved merit, well advertised and known to the public. In such a case the wise merchant will, first of all, compare the time and cost of selling, say, $200 worth of goods with an established reputation, and that are asked for by the public, with the time and cost of disposing of the same amount of another practically unknown, and that you have to persuade customers to buy against their own inclination. Not infrequently an unusually big discount is a suspicious symptom of dangerously poor quality, and be it remembered in this connection that a dealer's good name is his most valuable asset.

In handling reliable goods that are thoroughly advertised the dealer has an advantage that means much to him in dollars and cents. If the dealer has to make the reputation for the goods he handles and create a demand where none existed, and this, too, in competition with goods of established reputation and in constant demand, twice the discount offered by the manufacturer of the standard product would be too small.

When the progressive dealer rents a store he doesn't go into the side streets or away from the retail centre where he might get an elegant store at a very low figure, but he secures the best location possible, right on the principal street, and pays a good rent for it, knowing that the location will secure a volume of business that will justify the rental.

Just so in handling goods that are known to be standard, that have secured a reputation, that are advertised so extensively and judiciously that they are known almost to the exclusion of competitors' goods—the volume of sales of such merchandise will more than justify the small discount received.

The difference in discount represents but part of the cost to the manufacturer of making his wares the best known in the world, of advertising them in trade and other newspapers and creating a demand for them, of placing them in a position where they're called for and very little effort is required to sell them. He has taken the land in its virgin state, cut down the timber of prejudice, cleared the stumps of opposition and prepared it for the highest cultivation. Incidentally this costs the manufacturer lots of money, but it makes, at the lowest discount, the most profitable line of goods the retailer can handle.

There's more money in selling $100 worth of goods a month at 25 per cent. profit than there is in selling $100 worth of goods in two months at 40 per cent. profit. Furthermore, there may be reputation for you in one, and possible disaster in the other. It is the dealer's privilege to insist on the most favorable terms, but he must not allow an exaggersted discount to blind him to what is best for his good name and business.

Mr. William B. Converse, Manager of the newly organized Colonial Cordage Co., Toronto.

NEW CORDAGE COMPANY.

MR. W. B. CONVERSE, for the past three years assistant treasurer and assistant manager of the Consumers' Cordage Co., Montreal, has accepted the management of the newly organized Colonial Cordage Co., which has secured the mills and plant formerly operated by the Independent Cordage Co. He will also act as treasurer and as a director of the new company which has a capitalization of $50,000 and will have offices on Strachan avenue, Toronto.

Mr. Converse's connection with the cordage industry dates back eighteen years, having been with the Consumers' Cordage Co. in the various departments of the offices since it took over the Converse mill in 1891. The late Hon. J. A. Converse, who originated the cordage industry in Canada and established a mill in Montreal in 1825, was his grandfather, the Converse family having been connected with the industry in Canada for three generations.

The Colonial Co. will have up-to-date machinery and will make all kinds of hard fibre cordage and binder twine, the mill having a capacity of 1,200 tons. Toronto being a very central point for distribution the new company should meet with great success.

AUTOMOBILE SUPPLIES.

AS the popularity of the automobile keeps growing apace, a new field is opened up for the hardwareman—a field which will ultimately, no doubt, occupy the place filled some years ago by bicycle supplies. We refer to the handling of automobile supplies—a line which has already shown itself a success in many of the city hardware stores. In fact, one of the largest hardware dealers in Montreal is now selling out his staple hardware lines and will hereafter confine himself exclusively to automobile supplies and some other specialties.

But some of our readers in the smaller places may object that there will never be a field for these goods so far as they are concerned. In some cases, of course, this will hold good, but there are many towns—nay, even hamlets—which could take up this line to great advantage.

The writer recalls a small hardware store in a small village east of Toronto on that highway known as the Kingston Road. This is, as is well known, a thoroughfare extensively used by motorists, some days, when the roads are fine and the weather invites to outdoor sport, showing a regular procession of automobiles varying from heavy touring cars to the smaller but equally noisy and bad smelling runabouts. The young proprietor of the hardware store referred to saw the possibilities in this traffic, and one fine morning a large sign appeared by the roadside in front of his place of business, announcing the fact that he sold gasoline. That sign paid for itself many times over by the trade which it attracted, and it is in the hope that some of our readers will be able to follow his example with advantage to themselves that these words are penned.

There are many auto supplies besides gasoline which a country dealer on a busy highway could handle profitably, but it is the best starter. Later on, or perhaps simultaneously, he could add lubricating oils, tire cement, calcium carbide (for supplying the auto lamps) and the various tools necessary to a repair kit.

AN IMPERIAL BOARD OF TRADE.

A LARGE meeting of Montreal business men, recently held in the Board of Trade chambers, was addressed by Sir Frederick Pollock and Mr. Geoffrey Drage, who have been visiting this country in the interests of binding more closely together the various parts of the Empire. Although it was frankly admitted that the time is not yet ripe for the formation of any new body, whether it be styled an Imperial Council or anything else, still it will be interesting to note what these gentlemen are aiming ultimately to establish in the way of creating better understanding between the component parts of Britain's domain.

In the first place, if any more formal union is to come about it must be a gradual evolution, and come out of business arrangements. And in the process of this evolution there are many practical problems to be solved. The all-British cable must be dealt with; the question of naturalization and that of copyright must be settled, and there should be one uniform commercial law ruling throughout the Empire, consolidated and codified by the Imperial Government. Such an arrangement would remedy the glaring discrepancies which now exist in the insolvency law and the law of patents. It is said that in order to patent any invention throughout the Empire it is necessary to take out no less than twenty-eight distinct patents.

In solving these and similar problems the idea of Imperial co-operation and closer union would work itself out; but without assistance the evolution would be a painfully slow one. And in order to hasten the result it is proposed to make a systematic attempt at getting adequate information to bring about the various reforms suggested. How could this be better accomplished than by establishing an Intelligence Department, which would perform the same function towards civil business as similar Intelligence Departments do towards the army and navy? A competent secretary could be appointed in England, and he should be assisted by an able staff of clerks throughout the Empire. The British House of Commons would, no doubt, be willing to defray the expenses of this system. Furthermore, the conference of Premiers should be revived, and meet periodically under the name of "Imperial Conference," to promote the affairs of the whole Empire. The result of these investigations and deliberations could be incorporated in a uniform statistical blue book for the Empire.

This is a dream of the future, but it is one that could surely be realized, if natural evolution were assisted in some such manner as that described. Canadians will wish the project every success.

SUCCESSFUL JOBBERS AND SALESMEN.

No. 5.

IT will be a surprise to the heating trade to learn that the gentleman whose portrait is reproduced below, Mr. Thomas Worthington, is now representing the Taylor-Forbes Co., Guelph, in the sale of "Sovereign" heating goods in Western Ontario. Mr. Worthington had decided to leave the road and re-enter business on his own account, but with the characteristic enterprise which has made the Taylor-Forbes name favorably known in all parts of Canada, representatives of this company induced Mr. Worthington to reconsider his decision, thus adding to their staff a popular and successful

Mr. Thomas Worthington, Toronto, who will sell "Sovereign" heating goods in Western Ontario in future for the Taylor-Forbes Co.

traveler and an experienced heating engineer, the company now having in Messrs. Flett and Worthington two heating engineers thoroughly capable of upholding the high standard of the "Sovereign" radiators and boilers.

"Tom" Worthington, as he is familiarly known to steamfitters throughout Ontario, has the confidence of his customers, as he is well-known to have handled large contracts before taking up the work of a traveling salesman. In 1885 he entered the employment of Messrs. Keith & Fitzsimons, Toronto, serving his apprenticeship with that successful firm, later becoming foreman for E. Larter, and superintendent for Mashinter & Co., Toronto. While in the last named position he had charge of the installation of the steam heating and ventilation systems in the King Edward and Winchester schools, two of the best and most up-to-date school jobs in Canada. Another large work superintended by him was the installation of the steam heating system in the Manning Chambers, Toronto.

During the past couple of years Mr. Worthington has represented the Dominion Radiator Co. in Western Ontario, the same territory he will now cover for the Taylor-Forbes Co. He has won a reputation for himself as a salesman, and handling such a high-class line as the "Sovereign," backed by the record of Messrs. Taylor-Forbes for enterprise in business and excellence in manufacture, there is every reason to believe "Tom" will win further success in his new sphere of activity.

OF INTEREST TO HARDWAREMEN.

A NON-RATTLING window wedge is on sale in the hardware stores in England, it being a band of spring steel to be wedged in between window sashes.

* * *

Talking machines are one of the most popular side lines in the ironmongery and hardware stores in Great Britain.

* * *

Prizes are being offered in England and in the United States for the invention of traps which will capture or kill wild animals or small game without causing suffering to the game. The Society for the Prevention of Cruelty to Animals is behind the move from a humane standpoint. An economic reason is that suffering before death taints the meat.

* * *

Mr. Albert Karges, of Gardiner & Company, Woodstock, Ont., writes Hardware and Metal that during the past year he has been conducting the advertising in two daily papers for his firm and has found that it helps him wonderfully in explaining the advantages of stoves and other goods to customers and in making sales. Other salesmen could profit by Mr. Karges' experience.

* * *

The hardware dealers and manufacturers of the United States have a good market in Canada. They sent us last year articles to the value of $4,412,000.

To make an effective Christmas window display the windows should be dressed early in December and the needful goods should be in stock in November.

* * *

Few things are more valuable to a household than a cutlery cabinet, as in addition to its value as an ornament the cabinet provides a place for all the plated cutlery used in the house. There are many handsome designs on the market and the dealer should have at least one on display.

PERSONAL MENTION

Ontario.

Mr. W. L. Parish, Port Perry, was a visitor in Toronto this week.

Mr. J. M. Winters, King, called on Toronto hardware jobbers this week.

Wm. Dickenson, of Dickenson & Allen, Hamilton, was a visitor in Toronto this week.

S. T. Hadley, of the James Morrison Brass Manufacturing Company, Toronto, is on a duck-shooting trip to Dunbarton.

Mr. John M. Boyd, of Boyd, Burns & Co., Vancouver, passed through Toronto last week on his return from a trip to Europe.

McColl Brothers, oil merchants, Toronto, are enlarging their premises by the erection of a one-story galvanized building.

Fort William Hardware Co. has purchased the business of A. Dawson and Mr. H. H. Dawson will conduct the business in future.

Attention is drawn to the condensed advertisement in another column asking for a first class hardwareman for an established house.

Mr. John Connell, Clifford, has accepted a position as salesman in the new hardware store established by C. W. Clark at Burk's Falls.

Mr. B. Warren, hardware merchant, of Perth, Ont., is making a fine display of guns, ammunition, snowshoes and other sporting goods in his window.

It was the wife of Mr. C. L. MacNab, not that of Mr. D. A. MacNab of MacNab Brothers, hardware merchants, Orillia, who died recently in the Toronto General Hospital.

Mr. V. Eastwood, of the Peterboro Hardware Co., has left on a deer hunting expedition. The big hardware store will no doubt have a specimen of some fine antlers on his return.

Mr. R. G. Kingan, of the Kingan Hardware Co., left on the 30th ult. with a party of friends for New Ontario to hunt moose, cariboo and bear. Great results are expected as Mr. Kingan is a crack shot.

Mr. John McKechnie, of the Vulcan Iron Works, Winnipeg, was a visitor in Toronto a few days ago. Mr. McKechnie was returning from a trip to Ottawa where he had been attending a Masonic function, 33rd degree Scottish Rite.

John M. Owston, of the James Robertson Company, Toronto, is on a hunting trip in the wilds near Mount Forest. A preacher and an undertaker accompany him and all wear black coats so as not to be taken for deer or winged animals.

Messrs. Rice & Barnes, hardware merchants, Whitby, were the first to reply to the inquiry in last week's Hardware and Metal as to where Billings trowels could be procured. These goods can be had from the Gun Tool & Supply Co., Pittsburg, Pa.

Mr. Stanley Barr of Cobourg and a few friends have returned from their annual hunting trip. Mr. Barr said: "We had good luck. I saw several bears, but as our guns were loaded for duck did not waste our powder. We owe our good luck to the celebrated tonic G. & W."

Ald. William Wyatt, one of London's most successful business men, and head of the Wyatt firm, has sold out to Mr. John Brownlee, and is retiring, his realty holdings being over $75,000. His son Frederick, not enjoying very good health, will also retire for a while from active business.

Mr. I. M. Robertson, the well-known and popular hardware merchant of Tweed, has put his fine launch, the Thistle, into Winter quarters. He mentions that he has had the best season yet for picnics and excursions, and has had no trouble with his compounded gasoline engine.

Mr. R. S. Thompson, brother of A. Thompson, hardware merchant, Maple, was a visitor in Toronto this week buying mining machinery and hardware supplies. Mr. Thompson went to Cobalt last Spring and was fortunate to make a big strike, fourteen men now being employed on a silver property in which he is interested.

The Brantford Screw Company has appealed against the judgment of Justice Anglin awarding $1,000 damages to Nicholas W. Lynn, a Brantford youth, who while operating one of the company's nut machines had his hand badly mangled. He sued for $2,000, but the jury found that the company was guilty only of contributory negligence, and gave him half that amount.

John Lewis & Co., hardware merchants and plumbers, Belleville, who have carried on business under the same management for fifty years, have sold out the hardware department to Mr. Hudson, who has been book-keeper for Mr. Henry Corby. The new firm will be known as the Hudson Hardware Co., John Lewis & Co. still continuing the stove and plumbing department.

The Fader Screwless Door Knob Co., Orillia, which recently amalgamated with the Imperial Hardware Co., Toronto, has now got its factory in good running order, twenty-five hands being employed. Mr. H. A. Crocall expects to double the size of his staff before Spring. The company manufactures light hardware, such as locks, knobs, hat and coat hooks, etc.

The wholesale carriage and hardware business carried on in Hamilton under the name of A. K. Melburne & Co. will in future be conducted under the firm name of Wilkinson & Kompass, who have been connected with the business since its establishment in 1893 and have been sole proprietors since Mr. Melburne's death in 1898. The firm have erected a new warehodse at 28-32 McNab street south, Hamilton, and will remove from their present premises, 19 McNab street north, at the beginning of the year. The new firm is composed of Messrs. H. L. Wilkinson and Paul A. Kompass.

Western Canada.

A. McMichael, of the James Robertson Co., Toronto, is in Winnipeg this week consulting with the western house.

Geo. Caverhill, Montreal, of Caverhill, Learmont & Co., Montreal and Winnipeg, is in Winnipeg this week consulting with G. L. Waldon, the western manager.

Mr. James Burridge, for twenty years manager and president of the Gurney Stove and Range Co., and for four years president and manager of the Burridge Cooper Co., Winnipeg, has retired from this position and has become manager of the Mercantile Business Brokerage Co., with headquarters at Winnipeg.

Quebec.

N. Poirier, of Marieville, Que., visited Montreal recently.

Chas. Leblanc, hardware merchant, of Joliet, spent last Wednesday in Montreal.

P. O. Sacavant, of St. Chrysostome, was in Montreal this week buying supplies.

S. McClatchie, of Hemmingford, Que., paid a visit to the metropolis this week.

J. H. Bell, hardware merchant, of Mattawa, Ont., visited Montreal last Friday.

Octave Charland, plumber and tinsmith, of Nicolet, visited Montreal a few days ago.

Alex. Pilon, general merchant, of Casselman, Ont., was in Montreal on business this week.

G. A. Kohl, of B. & S. H. Thompson & Co., Limited, Montreal, is in New York for a few days.

E. R. Dorken, of Dorken Bros. & Co., cutlery importers, Montreal, is spending a few days in Toronto.

L. J. Moger, tinsmith and roofer, St. Antoine, was in Montreal this week on a purchasing expedition.

A. P. Gosselin, general merchant, of St. Alexandre, Que., was in Montreal this week purchasing goods.

Mr. McDonald, of the McDonald Manufacturing Company, Granby, was a visitor in the Royal City recently.

J. E. De Wolfe, of Halifax, formerly president of the Maritime Board of Trade, was in Montreal last Wednesday.

J. R. Terrill, of Caverhill, Learmont & Co.'s city traveling staff, Montreal, has been turned loose on his Sorel friends this week.

W. A. C. Hamilton, manager of the Toronto branch of the Consumers Cordage Company, Limited, is in Montreal for a couple of weeks.

F. O. Lewis, of Lewis Bros., Limited, Montreal, accompanied by Mrs. Lewis and Miss Mabel, sailed for England on the Cedric last week.

Edouard McGowan, of James McGowan & Son, general merchants, Ste. Martine, Que., called on some of Montreal's wholesale houses this week.

J. W. Thompson, of Frothingham & Workman's traveling staff, who makes his headquarters in Ottawa, dropped in on the house in Montreal last week.

T. H. Newman, of Caverhill, Learmont & Co., Montreal, is representing the local trade at the convention of the National Hardware Association in Washington, D.C.

Aubrey Spencer, son of J. W. Spencer, head of the firm of John Spencer & Sons, Limited, Newcastle, Eng., the famous boiler plate manufacturers, was a visitor in Montreal this week.

Frothingham & Workman, Limited, Montreal, lost one of their most promising assistants by the death of Mr. Frank McEvilla last week. The deceased, who was but twenty-three years of age, was employed in the heavy goods department of the firm.

MARKETS AND MARKET NOTES

(For detailed prices see Current Market Quotations, page 66.)

THE WEEK'S MARKETS IN BRIEF.

MONTREAL.

Horseshoes have advanced.

Wire Nails show a slight advance.

Bar Iron is up another five cents.

Lead Pipe discount is now 25%.

Merchant Steel — Several advances are reported.

Pig Iron has advanced in several grades.

Sheet Zinc is now quoted: In casks, 7¼c.; sheet, 8c.

Old Rubbers are now commanding from 7¼c. to 7½c.

TORONTO.

Iron Pipe—Most dealers have advanced prices.

Enamelware — Prices have been withdrawn, and an increase is imminent. Closets have already gone up.

Brass Goods — Several lines of valves and compression work are now quoted at lower discounts.

Linseed Oil — Most dealers have advanced prices one cent.

Crude Oil—Canadian Crude is quoted 2 cents higher.

Horseshoes—All sizes of steel horseshoes have advanced.

Pig Lead—An advance of 15 cents per 100 lbs. is reported.

Bar Iron—Radnor has advanced 50 cents, and Londonderry is strengthening.

Old Rubbers—Prices have advanced another quarter cent.

WINNIPEG.

Harvest Tools—Discounts for next season are 60 and 5 per cent.

Cartridges—Dominion military discount now 20 per cent., formerly 15 per cent.

Manila Rope, 7-16 and larger, price advanced ½c. per lb.

Iron Pipe—Prices have advanced.

Quebec Hardware Markets.

Office of HARDWARE AND METAL,
232 McGill Street,
Montreal, November 10, 1905.

A BRISK awakening in the trade has resulted from the broken weather of the past few days. This is not so apparent from city sales as from increased orders coming in from the country districts. All travelers are sending in good sized orders and indeed some of the local firms are being taxed to their utmost capacity to keep up with the great volume of business.

Horseshoes have been advanced during the week as will be seen in the appended lists. Wire nails are also higher, though our figures, $2.10 to $2.20 per keg will cover this advance. Bar iron is also up another five cents, these advances representing the only important price changes of the week.

Axes—There is no change in condition. Our quotations are as follows: Chopping axes, unhandled, $6 to $9.50 a dozen; double bitt axes, $9.50 to $12 a dozen; handled axes, $7.50 to $9.50; Canadian pattern axes, $7.50 a dozen.

Handles—Demand is good. Prices are as follows: Axe handles No. 3, $1.25; No. 2, $1.50; No. 1; $1.90 a dozen; adze handles, 34 inch, $2.20 a dozen; pick handles, No. 2, $1.70; No. 3, $1.50 a dozen.

Sewing Machines—Trade is very brisk. Nearly all standard makes being sold rapidly. Our quotations are as follows: Hand sewing machines, $11 each, net; complete machines, with stand, $18.00 and up, according to quality.

Lanterns—There is a fairly active trade at unchanged prices. Cold blast, $4.50; No. 0 Safety, $5.00.

Rivets and Burrs—Business is active. Best iron rivets, section, carriage and wagon box, black rivets, tinned do., copper rivets and tin swede rivets, 60, 10 and 10 per cent.; swede iron burrs are quoted at 60 and 10 and 10 per cent. off new lists; copper rivets with the usual proportion of burrs, 45 per cent. off; and coppered iron rivets and burrs in 5-lb. carton boxes at 60 and 10 and 10 per cent.; copper burrs alone, 30 and 10 per cent., subject to usual charge for half-pound boxes.

Screws—We quote as follows: Round head, bright, 82 1-2 per cent.; flat head, bright, 87 1-2 per cent., brass, round head, 75 per cent.; brass, flat head, 80 per cent.

Bolts and Nuts—The demand is normal for the season. Prices unchanged: 3-8 and smaller, 60 to 10; 7-16 and larger 55 to 5.

Horse Nails—Prices have not yet been changed, though this is expected to occur before long. We quote as follows: C brand, 40, 10, and 7 1-2 per cent.; M.R.M. Co., 55 per cent.; P. B. brand, 55 per cent.

Wire Nails—Prices have been advanced, though this is still covered by our quotations: $2.10 to $2.20 per keg, f.o.b. Montreal.

Horse Shoes—The change in horse shoe prices is one of the features of this week's trade. We quote: P.B. New Pattern, base price, $3.50 per 100 lbs., M.R.M. Company latest improved pattern iron shoes, light and medium pattern No 2 and larger, $3.65. No. 1 and smaller, $3.90, snow pattern, No. 2 and larger, $3.90, No. 1 and smaller $4.15. Light steel shoes, No. 2 and larger, $4: No. 1 and smaller, $4.25; featherweight, all sizes, No. 0 to 4, $5.60. Toeweight, all sizes, 1 to 4, $6.85. Packing—Up to three sizes in a keg, 10c. per hundred pounds. More than three sizes, 25c.

Sporting Goods—The principal lines now selling are hockey sticks and skates. Ammunition, however, is still going out well. We quote as follows: Canadian made shells, black, 25 and 5 per cent.; smokeless, 25, 10 and 5 per cent.; American centre-fire cartridges, list net; sporting and military, 10 per cent. advance on list; primers, $2.05 per thousand; American loaded shells, 20 per cent. discount; B.B. caps, $2.00 per thousand; standard shot, $6.50 per hundred lbs.; chilled, $7 per hundred lbs.; buck and steel, $7.50 per hundred lbs.; ball, $8 per hundred lbs. We quote discounts 15 per cent. on shot, f.o.b. Montreal, Toronto, Hamilton, London, St. John and Halifax.

Building Paper—Conditions are quite unchanged. Business is very satisfactory, and prices are unchanged.

Cordage—The market continues very steady. No changes have taken place in prices.

Cement and Firebrick—Local dealers are busy filling jobbing orders. There are no inquiries for large lots, however. Local trade continues fair. The quantity of firebrick moving is very large. We quote as follows: $1.80 to $1.90; Belgian, $1.60 to $1.90 per barrel; ex-store, American, $2 to $2.10 ex-cars: Canadian Portland, $2 to $2.05. Firebrick, English and Scotch, $17 to $21, American, $30 to $35; White Bros.' Eng. cement, $1.80 in bags; $2.05 in barrels in round lots.

Coil Chain— We quote: 5-16 inch, $4.25; 3-8 inch, $3.75; 7-16 inch, $3.55; 1-2 inch, $3.35; 9-16 inch, $3.30; 5-8 inch, $3.20; 3-4 inch, $3.05; 7-8 inch, $3; 1 inch, $2.95.

Skates—Orders are increasingly large. We still quote: From 25c. to $2.50, according to quality.

Sleigh Bells—The change in weather has greatly stiffened the demand. We quote prices as follows: Back straps, 30c. to $2.50; body straps, 70c. to $3.50; York Eye bells, common, 70c. to $1.50, pear shape $1.15 to $2; shaft gongs, 20c. to $2.50; Grelots, 35c. to $2; team bells, $1.80 to $5.50; saddle gongs, $1.10 to $2.60.

Horse Blankets—We quote: Jute, unlined $4.50; 3-4 lined $9.50; full lined $12; 16-oz. Hessian, unlined, $6.50; 3-4 lined, $11.50; full lined, $14, and up to $24; Kersey blankets, $9 to $21; all wool, $24, $30, $48 and $60.

Snowshoes—This promises to be a very popular hardware line this year. Prices vary from $15 to $35 per dozen pairs, according to quality.

Ontario Hardware Markets.

Office of HARDWARE AND METAL,
10 Front street east,
Toronto, November 10, 1905.

SNOW flurries and storms presaging the coming of winter have done considerable towards encouraging trade in winter goods and instructions to ship booked orders are being received by jobbers daily. Axes and handles

are going out in large quantities as are also skates and hockey sticks. Dealers are also ordering holiday goods liberally. The volume of cutlery and plated goods being ordered for immediate shipment is quite large. Sorting orders being received include many building lines as well as such winter requirements as weather strip and building paper.

Advances have been made on various lines of steel horseshoes, the new figures being quoted below. Trade in both horse shoes and horse nails is very brisk, while horse blankets and sleigh bells are also in fair demand.

Bolts and nuts have not advanced as yet, but the steadily advancing prices on bar and pig iron in outside markets as well as the advances made in United States recently on bolts and nuts indicate an early rise on the local market.

Lawn mower prices continue unsettled and dealers are securing fair concessions over last figures by booking orders early.

Axes and Handles—This is one of the most active lines and the volume is increasing steadily.

Cutlery and Silverware—Orders for holiday goods are very large and many sorting orders are being given.

Sporting Goods—Shotguns and ammunition are still being called for.

Lawn Mowers—Dealers who are placing orders now are getting the benefit of shaded prices.

Washing Machines—Trade is very active and dealers report increasing sales.

Chain—Cow chain is being included in most orders being placed. Our quotations are: 1-4 inch, $6.50 5-6 inch, $4.45; 3-8 inch, $3.85; 7-16 inch, $3.70; 1-2 inch, $3.55; 9-16 inch, $3.45; 5-8 inch, $3.35; 3-4 inch, $3.25.

Extension and Step Ladders—Manufacturers are rushing to make shipments of goods ordered. We quote: Step ladders at 10c. per foot for 3 to 6 feet, and 11c. per foot from 7 to 10 feet ladders. Waggoner extension ladders, 40 per cent. off.

Galvanized Wire—Trade continues inactive at unchanged prices. We still quote: $2.37 1-2 f.o.b. Cleveland.

Barb and Coil Spring Wire—There is little being done. Prices are unchanged.

Wire Nails—Talk of advance in outside markets has quickened trade locally somewhat.

Cut Nails—A very satisfactory volume of business is reported. Quotations are: $2.40 per keg f.o.b. Toronto.

Horse Nails—Blacksmiths' orders are very satisfactory and shipments are large.

Horseshoes—All sizes of steel horseshoes have advanced. Trade is very brisk. We quote: "P.B." base, $3.65; "M.R.M. Co., latest improved pattern" Iron shoes, light and medium pattern, No. 2 and larger, $3.80; No. 1 and smaller, $4.05; snow No. 2 and larger, $4.05; No. 1 and smaller, $4.30; light steel shoes, No. 2 and larger, $4.15; No. 1 and smaller, $4.40; featherweight, all sizes, 0 to 4, $5.75; toe weight, all sizes, 1 to 4, $7.00. If shipped from factory 15c. less.

Horse Blankets—Business in halters, girths, horse blankets and similar goods is active.

Skates and Sleigh Bells—Snowfalls in many districts have quickened business and orders to ship skates and hockey sticks are plentiful.

Screws—The market is very firm.

Rivets and Burrs—There is a possibility of higher prices and trade is active.

Bolts and Nuts—Quotations are very strong, but no advance has been made as yet.

Cordage—Quotations continue as follows: Red Cap, 11 1-2c.; Tiger, 10 1-2c.; Standard, 9 1-2c. Cordage: manila, 15c.; British manila, 11 1-2c.; sisal, 10 1-2c.; double lathyarn, 10 1-2c.; single lathyarn, 10c.; sashcord, "Hercules," 30c. to 32c.; "Star," 36c. to 38c.; cotton twine, 3-play, 24c.; 4-ply, 29c.; calking cotton, 16 1-2 to 17c.; cotton waste, colored, 6 3-4c.; white, 11c. to 13c.

Cement—There is still considerable cement being sold for foundations and inside cellar work. Prices are steady. For carload orders f.o.b. Toronto, Canadian Portland, $1.90 to $2.00; American Portland, $1.90 to $2.00. For small orders ex warehouse, Canadian Portland, $2.15 to $2.25; American Portland, $2.15 to $2.25.

Firebrick—A larger trade is reported. Prices continue as before: English and Scotch firebrick, 27c. to 30c.; American low-grade, 22c. to 25c.; high-grade, 27 1-2c. to 37 1-2c.

Building Paper—Shipments are very large. Prices continue firm and unchanged.

Hides, Tallow, Skins and Wool— The hide market is showing more settled conditions, and good trade is being done at present prices. Arrivals are coming in plentifully but on account of no stocks being on hand, are found only sufficient for immediate requirements. A feature of importance is the strong quotations on the Chicago market. Prices have advanced during past two weeks rapidly, and are several points higher, and ruling firm at that. Some dealers have made contracts in advance as far ahead as February next, at present advanced prices, evidently believing these prices will rule. There is no apparent reason for this, the only explanation being the prosperous condition of things generally, and the consequent incentive to retail trade, which brings active demand, regardless of cost. We quote:

Hides, inspected, No. 1 per lb.	0 11½	
" " " 2 "	0 10½	
Country hides, flat, per lb.	0 10	0 10½
Calf skins, No. 1, selected	0 13	
" " No. 2	0 11	
Lamb skins, best city slaughter	1 05	
Deer skins, green	0 12	
" dry	0 22	
Moose hides, green	0 07	
Horse hides, No. 1	3 00	3 25
Rendered tallow, per lb.	0 04	0 04½
Unwashed wool, per lb.	0 16½	0 17
Wool-washed fleece	0 26	0 27
Rejections	0 20	0 22
Pulled wools, super, per lb.	0 22	0 24
" " extra "	0 24	0 25

At a meeting of the Georgian Bay Power Co., held at Eugenia Falls recently, an estimate was submitted by a well-known hydraulic engineer to the effect that the minimum amount of power available would be about 2,400 horse power. The construction of the plant will be proceeded with at once.

Canadian Metal Markets.

QUEBEC.

Office of HARDWARE AND METAL,
232 McGill street,
Montreal, November 10, 1905.

ALL metals are firmer than ever this week. Several changes have taken place in market quotations, all of them showing an advance.

Pig iron is again one of the features of an advancing market. Several grades have been forced up during the week and others cannot be stocked at the present time and prices on them have consequently been withdrawn. The lateness of the season renders it impossible to expect many more additions to local stocks before the close of navigation. Indeed, it may be said that all the pig iron which will be received in Montreal this year is now on its way.

Tin, after easing up a trifle, recovered its strong tone and is now very firm at the same price as last week. A big buying movement on the other side created a shortage in New York which boosted prices again.

Sheet zinc has been advanced and spelter, too, has acquired considerable strength, though prices are unchanged.

Canada Plates—Prices this week underwent no change. The market is firm at the following prices: 52's, $2.50; 60's, $2.55; 75's, $2.60; full polished, $3.60; galvanized 52's, $4.00; 60's, $4.25.

Copper—Copper is very stiff. There is a big scarcity in the market yet and this week's tone is higher. We are quoting: Ingot copper, 17 3-4c.; sheet copper, 24 3-4c.

Ingot Tin—Tin is very stiff this week. Our prices remain as before. 36 1-2c. to 37c. per pound.

Pig Lead—Importers have been forced to meet another advance at the hands of the producers. The following prices are considered very low for imported pig: $3.90 to $4.00 per hundred lbs.

Boiler Tubes—We quote: British and American tubes, 1 1-2 inch, 8 1-2c.; 2 inch, 8 1-2c.; 2 1-2 inch, 10c.; 3 inch, 12c.; 3 1-2 inch, 15 1-2c.; 4 inch, 20c.; 5 inch, 45c. Price per foot net.

Pig Iron—Some further advances are noted this week. Our quotations are:

"Disc," No. 1	$16.50	delivered	Montreal.
"Dom.," No. 1	17.50	"	"
Usual difference in price for lower grades.			
Ferrona No. 1	$18 00	delivered	Montreal.
" No. 2	17.50	"	"

Direct Importers of:
Metals of every description, Wire Rope, Portland Cements, Firebricks, Ore Sacks, Grain Bags, etc, etc

lb.; Conqueror, 7 1-2c.; Conqueror High Speed steel, 60c.

Merchant Steel—Some further advances have been made during the week. We quote: Sleigh shoes, $2.07 1-2, tire, $2.22 1-2; spring, $2.75; toecalk, $2.77 1-2; machinery iron finish, $2.17 1-2; reeled machinery steel, $2.75; mild, $2.07 1-2 and upwards; rivet, $2.07 1-2 and upwards. Net cash 30 days.

Cold Rolled Shafting—We quote: Cold rolled shafting, 3-4 inch to 7-16, $3.75 per 100 lbs.; inch and a half to 3 inch, $3.50 per 100 lbs.

Galvanized Iron—Prices are very firm as given below. These are the rock bottom quotations at the present time. We quote: Queen's Head, 28 gauge, $4.10; 26 gauge, $3.85; 22 to 24 gauge, $3.60; 16 to 20 gauge, $3.35; Apollo, 28 gauge, $4; 26 gauge, $3.75; 22 to 24 gauge, $3.75; 16 to 20 gauge, $3.40; Fleur-de-Lis, 28 gauge, $3.85; 26 gauge, $3.60; 22 to 24 gauge, $3.35; 16 to 20 gauge, $3.10; Comet, 28 gauge, $3.85; 26 gauge, $3.60; 22 and 24 gauge, $3.35; 16 to 20 gauge, $3.10; Bell brand, 28 gauge, $4.20 to $4.25; Gorbal's "Best Best," 28 gauge, $4.10, "Windmill Best," 28 gauge, $3.95; Sword and Torch, 28 gauge, $4.05; in less than case lots 25c. extra.

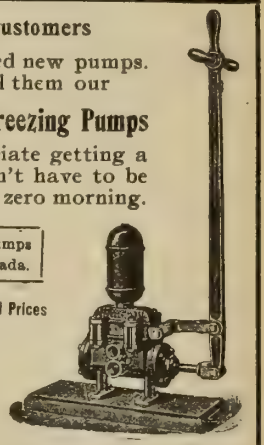
Black Sheets—The advances quoted last week are held firm. We still quote as follows: 28 gauge, $2.25; 26 gauge, $2.20; 22-24 gauge, $2.15; 19-20 gauge, $2.15; 8-10 gauge, 2.30.

Antimony—No further decline has occurred. It is very difficult even yet, to get this metal. We still quote: 14 1-4 to 14 1-2c. for Cookson's.

Tin Plates—The heavy demand in foreign markets is helping the Canadian trade, which is remarkably strong. We quote: Cokes, $3.75; charcoal, $4.00.

Terne Plates—Our prices are, $6.75.

Ingot Zinc—The tone of spelter is much higher this week, though we do not change our prices. We are still quoting: 6 3-4 to 7c.



Sheet Zinc—We are quoting an advance this week. Ruling prices are: In casks, 7 3-4c.; sheet, 8c.

Bar Iron—Another advance has taken place this week. We are now quoting $1.97 1-2 f.o.b., Montreal.

Old Material—Cast iron is in good demand, but there is little change to note in the demand of the rolling mills for wrought scrap. Old lead still maintains its high figure, in some cases commanding as high as 3c. Scrap copper and brass are still in good demand and prices are firm as last reported. Stocks in old rubbers are low and conditions are uncertain. The Boston Bulletin reports that dealers there are at a loss to know how to quote. Prices locally have advanced slightly: We quote: Copper wire, 13 3-4c.; light copper, 12 3-4c.; heavy red brass, 11 1-2c.; yellow brass, 9 1-4c.; light brass, 6 1-2c.; lead, 2 3-4c.; zinc, 3 3-4c.; machinery cast scrap, $13; wrought scrap, $12; stove plate scrap, $9; mixed rags, 75c. to 90c. per 100 lbs.; old rubbers, 7 1-4c. to 7 1-2c.

ONTARIO.

Office of HARDWARE AND METAL,
10 Front Street East,
Toronto, November 10, 1905.

PIG lead has made another advance during the past week being now quoted at the high figure of $4.25 per hundred pounds, the producers having forced importers to revise their figures. With the exception of certain lines of pig iron this has been the only change since our last report. Radnor pig iron is now quoted at $31.50 at the furnace, while Londonderry is also commanding higher figures in some cases. Our quotations on Londonderry are considered as low as it could be put.

Business is very lively in all lines, the firm prices seeming to have little effect on the volume of business being done. There is a strong temptation for dealers to sell some stock bought at low figures some months ago rather than quoting their customers figures warranted by the present high markets. This accounts to some extent for the wide variations occasionally found in prices quoted on large orders

Pig Iron—Radnor has been advanced 50c. and Londonderry is very firm at prices quoted. Business is active. We quote:

Middlesboro, f.o.b., Toronto	$22 50
Hamilton, No. 1, at furnace	18 50
" No. 2, "	18 00
Midland, No. 1, "	18 50
" No. 2, "	18 00
Radnor, at furnace	31 50
Londonderry, at furnace	16 50 to 17 00

Bar Iron—The market holds strong and conditions are unchanged. We quote $1.95 base, f.o.b. Toronto, with discount of 2 per cent. net cash.

Tin—Prices have fluctuated but are again strong.

Tin Plates— Demand is active with prices very firm.

Galvanized Sheets—Prices are firm in the outside markets, the demand continuing active locally.

Brass— Conditions are unchanged, business being active. Discounts continue at 10 per cent.

Lead—The price of pig lead has been advanced. The demand continues quite active. We quote: Pig lead, $4.25 per 100 lbs., and bar lead, $4.80 per 100 lbs.

Zinc Spelter—Trade is quieter and prices unchanged. We quote: 7c. per lb. for foreign and 5 1-2 to 5 3-4c. per lb. for domestic.

Copper—Stocks are scarce and prices very stiff. We quote: Ingot copper, $17.50 per 100 lbs., and sheet copper, $21.00 per 100 lbs.

Antimony—Prices are holding steady with stocks in hand light.

Old Material—Trade is more active with old iron, lead, copper and brass all in strong demand. Old rubbers and mixed rags are also stronger. Dealers' buying prices are as follows: Heavy copper and wire, 13c. per lb.; light copper, 12c. per lb.; heavy red brass, 11 1-2c. per lb.; heavy yellow brass, 9c. per lb.; light brass, 7 1-2c. per lb.; tea lead, $2.40 per 100 lbs.; heavy lead, $2.75 per 100 lbs.; scrap zinc, 4c. per lb.; iron, No. 1 wrought, $8 to $8.50, No. 2 wrought, $3 to $5; machinery cast scrap, $13; stove plate, $10; malleable and steel, $5; old rubbers, 7c. to 7 1-4c. per lb.; country mixed rags, 75c. per 100 lbs.

Coal—There is little change in this market, prices being steady and a good trade being done. We quote: Anthracite in cars at bridges, grate, $5.25 per gross ton; egg, stove and nut, $5.50 per gross ton; pea, $3.90 per gross ton.

Standard Hocking, soft coal, in cars, f.o.b. at mines: Lump, $1.35; 3-4 inch, $1.25; run of mine, $1.05; nut, 90c.; N. P. and S., 60c.; slack, 40c.; box cars 10 cents per ton additional.

Youghiogheny soft coal in cars, bonded at the bridges: 1 1-4 inch, $2.45; 3-4 inch, $2.35; mine run, $2.35; slack, $1.80 to $1.90.

For Manitoba, British Columbia and Maritime Provinces markets see pages following.

UNITED STATES METAL MARKETS

Advance proofs furnished HARDWARE AND METAL by The Iron Age, November 7, 1905.

OCTOBER will go down in the history of the iron industry for record breaking. The monthly statistics of the Iron Age show that there were produced by the anthracite and coke furnaces of the United States 2,053,127 tons of pig iron, which compares with the previous achievement of 1,963,717 tons in May. These figures do not include the output of charcoal pig, which may be estimated at about 30,000 tons a month. The steel companies produced 1,370,960 tons in October, as compared with 1,287,438 tons in May. Of this October product the United States Steel Corporation has 950,752 tons.

The Carnegie Steel Co. in October broke 78 past records of production at its furnaces and mills, not counting turn and day records which would greatly add to the number. Thus the Edgar Thompson rail mill made in October 83,568 tons of steel rails.

How enormous the output of the steel works is is proved by the record of the plants of the United States Steel Corporation, which in October produced 1,172,951 gross tons of ingots.

The pig iron markets throughout the country are exceedingly firm, and the conviction seems to be gaining ground that further advances are inevitable. Production, however, is at an enormous rate, our statistics showing that on the 1st instant coke and anthracite furnaces having a capacity of 460,000 tons weekly were in operation.

It is understood that the Bessemer association has shown little disposition to meet the requirement of the steel corporation for an option on 15,000 tons of pig iron monthly for the first quarter of the year, the total quantity of association iron available for that period being only 57,000 tons. There are reports of further sales of basic iron in the eastern markets, but much of these appear to have been made some time since.

There has been some heavy buying of forge, foundry and malleable iron in New York State from Albany and Troy westward, the bulk of it going to Buffalo, furnaces, which have again advanced their prices to the basis of $17 at furnace for No. 2.

Southern furnaces are now squarely on the basis of $14 for No. 2 foundry at Birmingham, but have made only moderate sales lately, being heavily booked.

The demand continues heavy, considering the enormous purchases made during the past two months. Among the large interests which are again in the market may be noted the cast iron pipe industry.

Moderate sales of steel rails are reported, with some further heavy contracting in sight. Light rails have again advanced $1 per ton and spikes are higher.

Plate makers are again urging the necessity for higher official prices, and this may come at an early date. The demand for sheets is good, but prices show no improvement. In the tin plate trade the leading interest has opposed an advance.

The pressure for deliveries in the structural trade is enormous. Two contracts for buildings for Chicago, calling for about 15,000 tons, were let during the week.

In the merchant pipe trade the most interesting feature is an inquiry for 600 miles of 6-inch pipe for an oil line from Kansas City to St. Louis.

LONDON METAL MARKETS.

From Metal Market Report, November 8, 1905.

Pig Iron — Cleveland warrants are quoted at 51s. 9d, and Glasgow standard warrants at 50s. 9d, making prices as compared with last week 10 1-2d lower for Cleveland warrants and 1s. 3d lower for standard warrants.

Tin—Spot tin opened firm at £150 10s., futures at £149 17s. 6d, and after sales of 80 tons of spot and 240 tons of futures closed steady at £150 10s. for spot and £149 17s. 6d for futures, making price as compared with last week, £1 10s. higher on spot and £1 10s. higher on futures.

Copper—Spot copper opened firm at £72 12s. 6d, futures £71 12s. 6d, and after sales of 300 tons of spot and 900 tons of futures closed firm at £72 15s., for spot and £71 15s. for futures, making price as compared with last week, £1 5s. higher on spot and £1 5s. higher on futures.

Lead—The market closed at £15 1s. 3d, making price as compared with last week, £2 2s. 6d higher.

Spelter—The market closed at £28 7s. 6d, making price as compared with last week 2s. 6d higher.

The Dominion Government has issued a report on asbestos in Canada, in which it says this country has become master of the field of export. The United States has so far been the largest buyer, while England, Germany, France and Italy, and lately Russia, buy large quantities of the crude and some of the better classes of fibre. The industry began in 1880, when the value of exports was $24,700. In 1904 the output had increased to $1,154,566.

The Stanley Works, New Britain, Conn., manufacturing builders' hardware, will erect a new machine shop.

British Columbia Trade News

Vancouver, B.C., Nov. 3, 1905.

SUMMARIZING the freight shipments handled down the Yukon during the season just closed, the White Pass Railway Co., in a report, states that in all 23,385 tons of freight left White Horse in steamers bound down river. For Tanana and other points below Dawson 4,648 tons of freight, 422 head of cattle, 721 sheep, 23 horses, and 150 hogs were shipped, while for points between White Horse and Dawson 824 tons of freight were delivered.

* * *

The C.P.R.'s new line from Yahk, on the Crow's Nest Pass, south to Spokane, is being rushed to completion as quickly as 1,500 men can work, and the contractors would put on more men if they could get them. The new line has not been located right into Spokane yet, but the survey work is keeping ahead of construction. On the docks at Fort William at the present time are 17,000 tons of steel rails, the bulk of the requirements for the new line. These were delivered under contract to be on the dock before the close of navigation, and as soon as the rush of grain deliveries from the wheat fields of the Canadian west has slacked off the company will begin moving the steel west, as work can go on practically all Winter.

* * *

Supplementing their operations on the Spence's Bridge-Nicola branch, the C.P.R. is already at work to carry their southwestern line into the Similkameen district from the Midway terminus. This will practically parallel the line the Great Northern has been busy building all Summer into the district, and the extension of the Midway and Nicola lines will complete the C.P.R.'s circuit through the Similkameen, making the short line from the Kootenay to the coast, via Grand Forks, and Greenwood from Robson.

Interesting accounts have come to hand of clashes between the men of the rival companies at a point where the Great Northern is to cross the C.P.R. branch not far from Midway, where the Great Northern was working eastward on the new grade. The C.P.R.'s line west of Midway had been staked years ago on practically the same right of way sought to be used by the Great Northern, and they started in to grade west from Midway, to prevent the Great Northern getting the line. A clash was avoided when the rival squads met only by the fact that the C.P.R. had a much superior number of men.

* * *

A great deal of interest is being taken in the many rich strikes of quartz on the Canadian side of Portland Canal this Summer. So many prospectors have been in the field this Summer that a great deal of new ground has been covered. As the new strikes are close to the portion of the international boundary being delimited since the recent award, the parties of surveyors sent out by the Government have been in a position to see what has been discovered, and they endorse previous reports as to the extent and value of the finds.

The narrow waterway leading up to Skagway is very likely to be the scene of a mining boom of some dimensions and great activity next season, many Americans, as usual, having got in on the "ground floor" with no one under them.

* * *

Vancouver city has now concluded a contract with the B. C. Electric Co. renewing its street lighting contract for ten years, on a much reduced basis. Hitherto the rate has been $93 for open arc lights, but new type lamps are to be installed and the rate is to be $38 per year. The company offered to allow the contract to commence now, instead of next June, when the old contract terminates, the saving thus effected being over $15,000. Mayor Buscombe strongly opposed the contract, though it can be abrogated in a year any time. He made a strong campaign for a municipal plant, and failing that a contract from the Electric Co. to give substantial reductions in the incandescent rates charged in the city. The company has, however, promised to make these reductions next April, when their waterpower plant shall have been running a year. The electric company also announces great extensions of its lines through the rural districts surrounding the two cities of Vancouver and New Westminster, making light and power available to hundreds of small farmers and ranchers.

* * *

A very serious fire on the night of October 30 practically made a clean sweep of the B. C. Wire and Nail Co.'s plant on the water front. The loss is almost $100,000 with but $18,000 insurance. All the stock of finished product and raw material on hand, as well as the buildings and plant were destroyed. No cause has been discovered, though it is suggested that imperfect insulation of some electric wires may have been the cause. The plant was operated by electric power. The management express their intention of rebuilding, and also announce that having saved their books, and having sufficient money in hand, they wish all accounts in at once so that they can settle up before starting afresh. The plant was only completed this season, and had begun to work up a very good trade. They brought the raw material—the black rods—from England, and the drawing, nail-making and galvanizing were all done here.

Progressive dealers should impress upon their trade the advantage of using "Impervia" Wired Glass Windows with fusible links, in hollow metal sash and frames, which are proof against any fire, and obviate the necessity of fireproof shutters, otherwise demanded by the insurance companies.

"Impervia" Wired Glass Windows equipped with our patented automatic closing and locking device are held open by a chain, in which is a soft, fusible link that melts at a very low degree of heat, releasing the sash, which instantly closes and locks itself.

OUR NEW $10,000 CATALOGUE We have just issued the most complete Catalogue ever offered to the Metal Trade. It is a veritable encyclopædia of all that's practical and beautiful in the Art Manipulation of Sheet Metal. Book contains 440 pages, superbly bound and illustrated. We send it free upon request, to any builder, contractor or dealer of responsibility.

410

COMMERCIAL TRAVELERS' OFFICERS.

The quarterly meeting of the Dominion Commercial Travelers' Mutual Benefit Society was held in Montreal last Saturday, with the president, Mr. Alex. A. Murphy, in the chair.

A most satisfactory report was read, showing an increase in the membership, and also an increase in the reserve fund.

The nomination of officers for the ensuing year was then proceeded with, resulting in the election of the following geotlemen by acclamation: President, J. S. N. Dougall; vice-president, Richard Booth; treasurer, Chas. Gurd; trustees, David Watson, E. H. Copeland, Max. Murdock, J. F. L. Dubreuil, and J. N. Christie.

The newly appointed president, Mr. Dougall, retires this year from the presidency of the Dominion Commercial Travelers' Association, having filled that office for the past two years.

Hardware and Metal Conditions in Manitoba.

(Market quotations corrected by telegraph up to 12 a.m. Friday, Nov. 10, 1905.)
Office of HARDWARE AND METAL
Room 511, Union Bank Building,
Winnipeg, Man.

COLDER weather is stimulating trade in some lines of general hardware. Heavy goods are still being rushed in by the lake and rail routes and the demand for such lines is brisk. Collections are still showing a marked improvement.

There are not many price changes this week. Iron pipe has been advanced and new prices will be found below. Manila cordage has been marked up 1-2 cent per pound. Two or three other small changes will be noted.

Game Traps—This is the season for brisk selling of game traps. Prices are quoted as follows:

H. & N., discount	50 and 5 p.c.
Victor, "	66⅔ p.c.
Newhouse, "	35 p.c.
Bear	$7 each

Lanterns—Wholesale prices are steady at the following figures:

Cold blast lanterns	$4 75	per doz.
Coppered cold blast lanterns	6 75	"
Cold blast dash "	7 25	"
Lift Lanterns	4 25	"

Wire—Prices are steady. We quote:

Barbed wire, 100 lb		$3 00
Plain galvanized	6 to 8	3 39
"	9	2 50 2 90
Plain galvanized	10	3 50
"	12	3 10
"	13	3 20
"	14	3 90
"	15	4 45
"	16	4 60
Plain twist		3 00
Staples		3 50
Oiled annealed wire	10	2 96
"	11	3 02
"	12	3 10
"	13	3 20
Oiled annealed wire	14	3 30
"	15	3 45

Annealed wires (unoiled) 10c. less.

Horseshoes—As noted last week, iron shoes have been advanced 10 cents and steel shoes 15 cents. We now quote as follows:

Horseshoes, iron, No. 0 to No 1	$4 65
No. 2 and larger	4 40
Snow shoes, No. 0 to No. 1	4 90
No. 2 and larger	4 65
Steel, No. 0 to No. 1	4 90
No. 2 and larger	4 65

Horsenails—Discounts are as follows: "C" brand, 40, 10 and 7 1-2 per cent., "M" brand and other brands, 55 and 60 per cent. Add 15c. per box.

Wire Nails—Immense quantities of wire nails are being hurried in before the close of navgation. The price has been steady since the decline to $2.60 per keg.

Cut Nails—Price, $3.00 per keg, base price. None selling because of the low price of wire nails.

Screws—No change in price. Demand continues brisk at following unchanged discounts:

Screws, flat head, iron, bright	85 and 10 p.c.
Round " "	80 p.c.
Flat " brass	75 and 10 p.c.
Round " "	70 and 10 p.c.
Coach	70 p.c.

Nuts and Bolts—Discounts are unchanged. We quote:

Bolts, carriage, ⅜ or smaller	60 and 5 p.c.
" 7-16 and up	55 p.c.
Bolts, machine, ⅜ and under	55 and 5 p.c.
" 7-16 and over	55 p.c.
Bolts, tire	65 p.c.
Bolt ends	55 p.c.
Sleigh shoe bolts	65 and 10 p.c.
Machine screws	70 p.c.
Plough bolts	55 p.c.
Square nuts, case lots	3c. discount.
" " small lots	2½c. "
Hex " case lots	3c. "
" " smaller lots	2½c. "

Rivets—Discounts continue as follows:

Rivets, iron	60 and 10 p.c.
Copper, No. 8	29½
" No. 12	33

Coil Chain—Unchanged in price. We quote:

Coil chain, 3-16 inch	9.25
" ¼ inch	7.20
" 5-16 inch	5.20
" ⅜ inch	4.60
" 7-16 inch	4.45
" ½ inch	4.30
" ⅝ inch	4.10
" ¾ inch	4.00

Shovels—Discounts on spades and shovels continue 40 and 5 per cent.

Harvest Tools—Discounts are now 60 and 5 per cent.

Axe Handles—Quoted as follows:

Axe handles, turned, s.g.hickory, doz	$3 15
No. 1	1 90
No. 2	1 60
Octagon extra	2 30
No. 1	1 60

Axes—Prices are quoted as follows:

Bench axes, discount off list	40 p.c.
Broad " " "	25 p.c.
Royal Oak, per doz	$ 6.25
Maple Leaf, "	8.25
Model "	8.50
Black Prince "	7.25
Black Diamond "	9.25
Standard Flint Edge, per doz	8.75
Copper King, per doz.	9 00
Columbian, "	10.75
Handled axes, North Star, per doz	7.75
" " Black Prince, per doz	9.25
" " Standard Flint Edge, per doz	10.50
" " Copper King per doz	11.00

Butts—The discount on wrought iron butts is 70 per cent.

Churns—The discounts from list prices are 45 and 5 per cent.

Chisels—Quoted at 70 per cent. off list prices.

Auger Bits—Discounts on common auger bits is 65 per cent.

Blocks—Discount on steel blocks is 35 per cent. off list prices; on wood, 55 per cent.

Fittings—Discounts are quoted as follows:

Wrought Couplings	60 p.c.
Nipples	65 and 10 p.c.
T's and elbows	10 p.c.
Malleable bushings	50 p.c.
Malleable unions	60 p.c.

Grindstones—The price is now 1 3-4c. per lb.

Fork Handles—The discount is 40 per cent. from list prices.

Hinges—The discount in light "T" and strap hinges is 65 per cent. off list prices.

Hooks—Brush hooks are in some re-

quest at present. Prices are quoted as follows:

Brush hooks, heavy, per doz.....$8.75
Grass " per doz. 1.70

Draw Knives—The discount is 70 per cent. from list prices.

Rules—Discounts are 50 and 10 per cent.

Washers—On small quantities the discount is 35 per cent.; on full boxes it is 40 per cent.

Wringers—Selling at following prices:

Boval Canadian, per doz..... $30.05
R. B, per doz..... 34.07

Files—The discount on "Arcade" files is now 75 per cent. We quote as follows:

" Arcade " ..... 75 p.c.
" Black Diamond" ..... 60 p.c.
" Nicholson's " .... 62½ p.c.

Building Paper—Business is still very active in all lines of building paper. We quote:

Joliette, plain	40c.
" tarred	65c.
Cyclone, plain	55c.
" tarred	80c.
Anchor, plain	55c.
" tarred.....	65c.
Pure fibre, plain	60c.
" " tarred.....	80c.

Tinware, Etc.—We quote again as follows:

Tinware, pressed, retinned. ..... 70 and 10 p.c.
" " plain..... 75 and 2½ p.c.
" pieced..... 30 p.c.
Japanned ware .....37½ p.c.
Enamelled ware, white..... 45 p.c.
" Famous..... 50 p.c.
" Imperial.....50 and 10 p.c.

Cordage—Manila has been advanced 1-2c. per pound. Prices are now quoted as follows:

Rope, sisal, 7-16 and larger, basis.....	11 25
Manila, 7-16 and larger, basis.....	15 75
Lathyarn.....	11 25

Solder—Quoted now at 21c. per lb. with concessions for large quantities.

Corrugated Roofing and Siding—Prices are still quoted as follows:

ROOFING.

16 to 95 "	17.30
6 to 100 "	

Nova Scotia Trade News

Halifax, N.S., Nov. 8.

THERE is practically a panic in the metal markets in Halifax at the present time. The stocks held by the jobbers are nearly all cleaned up. The demand for sheet lead and sheet iron and sheet zinc at this season of the year is always good, but at the present time the demand is greater than ever before. This shortage will greatly retard trade. One of the leading hardwaremen of this city to-day informed your correspondent that he could dispose of all the sheet lead and zinc available at 8½ cents per pound. The jobbers here hold very little stock, and what they have on hand they could have disposed of ten times over, but they are holding on to it, and only supplying the most urgent demands of their best customers. The dealers do not care about taking the risk of importing at the present prices, though some have placed orders by cable, even at the advanced prices. The plumbing trade in particular is suffering as a result of the condition of the market. Trade and collections continue good and the jobbers are kept busy filling orders. The manufacturers have notified the jobbers of an advance of 10 cents per keg on wire nails. The jobbers have not made any increase so far. They are still selling nails at $2.25 per keg base.

The run on roofing materials is unusually good. Good sales are reported of 2 and 3-ply roofing, tarred felt and tarred sheathing.

W. G. Robertson, M. O. Crowell and W. H. Stevens, of this city, who were at St. John, N.B., last week attending a meeting of the executive of the Maritime Hardware Association, have returned home. Reports from the delegates who attended the recent meeting of the Canadian Hardware Association held at Toronto were received and tariff matters discussed. The most important business was the revision of the price list. The matter of price has been causing much concern for several months past, but it is now thought the matter is settled. The revised list will probably be issued to the jobbers next week.

The work of excavating for the new foundry at Glace Bay for the Dominion Coal Co. has been commenced. The building will be 90x100, about twice the size of the present foundry. The new building will be of brick, with steel frames, and will cost $25,000. It is expected that the building will be completed inside of three months. The capacity of the foundry will be ten tons per day.

It is reported that Alex. Moxham, who was manager of the steel works at Sydney, is to take over the control of the Colonial Copper Co.'s works and mines at Cape D'Or. An engineer in the interest of Mr. Moxham is now at Cape D'Or, making an examination of the mine, and Mr. Moxham and a number of his associates are expected short-

ly. A short time ago a number of the men were discharged, but it now looks as if work will soon start with renewed energy.

The Dominion Coal Co., it is stated, have secured a big contract from the Boston & Maine Railway Co. for the delivery of 75,000 tons of coal during the coming Winter. The delivery of the coal will begin about the first of December next, and will be continued at the rate of 15,000 tons per month until the whole contract is delivered.

TARIFF COMMISSION AT WORK.

THE Tariff Commission, under the presidency of Hon. W. S. Fielding, has been sitting in Montreal during the present week, and delegations representing many different lines of trade have been heard.

From a hardware standpoint, the most interesting session was that of last Tuesday, when requisitions were presented by representatives of several manufacturing interests, nearly all of whom asked for higher protection.

At the opening of the inquiry Tuesday morning, C. C. Ballantyne, president of the Canadian Manufacturers' Association, extended a cordial welcome to the commissioners, and intimated that some of the sections were not yet ready with their cases, but an arrangement could probably be made whereby those who were not ready would be allowed to present their requisitions at some later time, at any convenient point. The interests whose cases were not yet prepared for the presentation included the iron and steel industries, the paint and varnish manufacturers, and the boot and shoe manufacturers.

A strong plea was made for higher protection by the Dominion Wire Mfg. Co. Montreal Rolling Mills, and Peck Rolling Mills, manufacturers of wire nails, asked that no change be made in the present duty of 3-5c. per pound, unless the Government decided to put a duty on wire rods, in which case they would ask that such duty be added to the present protection on wire nails.

Mr. J. C. McCormack, president of the Dominion Wire Mfg. Co., pointed out that in barbed and galvanized wire the United States Steel Co. had a practical monopoly of the Canadian market, and that Canada, directly or indirectly, was losing a trade which is worth $2,000,000 per annum. Mr. McCormack gave a number of interesting statistics, showing that during the fiscal year ending last June, Canadian imports of galvanized wire amounted to 16,692 tons, valued at $658,000, while barbed wire to the amount of 20,579 tons, and valued at $892,000, came into the country. Of this, 93 per cent. of the galvanized, and 86 per cent. of the barbed wire, came from the United States, while the balance was manufactured in England or on the continent. Before the removal of the duty between ten and twelve thousand tons of barbed wire were consumed in Canada, while, last year, about 22,000 tons were used, only about 2,000 tons being manufactured in Canada. Mr. McCormack therefore asked that a specific duty of 50c. per hundred pounds, or not less than 20 per cent., be put on galvanized and barbed wire. This would put the Canadian manufacturers of wire on an equal footing, and would give the Canadian steel manufacturers an opportunity to supply to Canadian wire manufacturers no less than 40,000 tons of wire rod per year. This would mean an additional output of one million dollars a year to the mills of the country.

Replying to Hon. Mr. Paterson, Mr. McCormack said that the only galvanized and barbed wire manufactured by them was for consumption on Montreal Island. When they wished wire for the country at large they were obliged to purchase from Cleveland, and take a profit as commission merchants.

For Decrease on Steel Tubing.

Mr. John Millen, of John Millen & Sons, hardware merchants, who deal extensively in steel tubing, pointed out that mechanical steel tubing should enter Canada at 10 per cent., the same as bicycle tubing, instead of at 35 per cent., the present duty. This tubing is not made in Canada, and it forms the raw material for a number of manufactured articles which are either on the free list, or subject only to a very low rate of duty. Mr. Millen suggested that boiler tubing pay 5 per cent., and bicycle and mechanical tubing 10 per cent., instead of 35 per cent. He did not think the mechanical steel tubing, which was coming more and more into use, would be manufactured in Canada for a long time to come.

No Change for Rolling Mills.

Mr. J. R. Kinghorn, representing the Montreal Rolling Mills and Peck Rolling Mills, asked that no change be made in the present tariff respecting rolled iron and steel angles, as present conditions are satisfactory. An interesting point to develop during Mr. Kinghorn's examination was the fact that the Canadian mills can no longer supply steel billets for the market, owing to the great demand for steel rails. Consequently the rolling mills are compelled to purchase abroad.

Steel Works are Heard.

The Montreal Steel Works were represented by Messrs. J. R. Wilson and K. W. Blackwell, who complained about certain changes which had recently been made in the tariff. That is, a duty of seven dollars per ton has been put on steel rails, and there has been no corresponding increase on the manufactured article. The Montreal Steel Works, it may be explained, are large manufacturers of steel castings and railway construction material. By reason of this duty it is difficult to compete with the manufacturer in the United States, who gets his rails at so much less than Canadians are compelled to pay. A private statement covering the ground of the arguments and giving the relative cost of the articles here and in the United States, was presented to the commission for their perusal. In conclusion Mr. Blackwell stated that they would like the duty to be increased from 30 to 35 per cent. ad valorem, which was not an exorbitant request, considering that the company employed 900 hands in Montreal alone.

On Wednesday the commission dealt with the tobacco interests and the various branches of dry goods. On Thursday on the invitation of His Excellency the Governor-General, the commission were present at the dinner in honor of the King's Birthday. The sessions were resumed on Friday.

AN UNNECESSARY WASTE.

NOT long ago a well known Canadian company requested Hardware and Metal to use the word limited after its name whenever it appeared in any issue of the paper. The request was complied with at the time, but in looking up the number of times where the word is used in the ordinary course of events it is found that there is a tremendous waste in using the word where it appears to be altogether unnecessary. In the department of industrial gossip in a recent issue the word limited appears thirty times in an ordinary page of reading matter, fully five lines being occupied in merely complying with a form. This is not the only waste, however, as there is the expense of making the dies, setting the type, etc. By leaving out the word the editor will have less labor to perform and will be able to insert a larger amount of news matter in the page than by complying with the ordinary form of using the word wherever the name of the firm appears. According to the law under which companies are registered, companies are compelled to use the word limited after their name in all official documents, in all advertisements and on all printed matter bearing the company's name. Where the word "company" is abbreviated the word "limited" must be spelled out, but where the word "company" is spelled out, "limited" can be abbreviated.

As it is necessary for an individual to know when he is doing business with a concern composed of a number of individuals whose liability is limited to the amount of their investment in the company's stock, it would seem to be a wise precaution to enforce the regulation calling for the use of the word wherever the company's name appears officially. In the U. S., however, where a larger number of companies are incorporated than in Canada, "limited" is not used to nearly so great an extent as in this country. There does not seem, therefore, the necessity for using the word in the ordinary course of newspaper writings, and Hardware and Metal will substitute commonsense for form in its reading columns in future, considering that this policy might well be adopted by other papers.

Builders' hardware figured in Canada's imports for the past year to the extent of $658,338.

* * *

The American life insurance agents are about the only ones who are not looking forward to a good Winter's business.

The agreement of the German wire-rope syndicate will expire at the end of the year, and the sale of ropes for 1906 has already been set free for the open market. It is, however, not impossible that a fresh understanding may be arrived at.

PAINT, OIL AND BRUSH TRADES

SHERWIN-WILLIAMS BANQUET.

ONE of the most successful of the twenty-five annual conventions of the Sherwin-Williams Co. was brought to a close Friday night by an enjoyable banquet at the Windsor Hotel, Montreal. About 225 guests sat down to the tables, which were arranged in the beautiful main dining room of the hotel. The decorations were elaborate, the feature being a huge transparent globe suspended from the central dome, and made to represent the company's famous "Cover the Earth" sign.

Mr. C. C. Ballantyne, manager of the Canadian division, was chairman for the evening, and proposed the only two toasts, "The King" and "President Roosevelt," both of which were greeted with enthusiasm.

After these toasts had been honored the president, Mr. H. A. Sherwin, was called upon. He said, in part, that he considered himself more than ordinarily fortunate to have lived to see the company, which he had started in a small way, grow to such proportions. The success of the Sherwin-Williams Co. he generously attributed to the loyal staff of officers by whom he was surrounded. He hoped that still many years of co-operation were before them.

F. D. Monk, M.P., paid a great tribute to the industrial enterprise of the United States, where, alone, were companies who could afford such spectacles as the one there presented. Canadians were glad to see American capital come into their country to assist in its development. Speaking as a public man, he would, however, assure the gentlemen present that Canada had no ambition to attain a political union with the nation to the south. Mr. Monk spoke a fitting eulogy of C. C. Ballantyne, the manager of the Canadian division of the company, whose unanimous election to the presidency of the Canadian Manufacturers' Association at a moment when most important interests were at stake, attested his reputation for business ability. In conclusion, Mr. Monk expressed the hope that the United States and Canada would work together like brothers, in the interests of this great continent, the future of which is so bright.

Acting-Mayor Clearihue was then called upon and expressed his pleasure at the presence of the Sherwin-Williams representatives in the city of Montreal, which was destined by reason of favored position to become one of the greatest cities on the continent.

Rev. Dr. Johnston, of the American Presbyterian Church, made a most happy speech, in which he said that co-operation, rather than competition, was what was wanted in the business world. Dr. Johnston referred to his old acquaintance with Mr. Cottingham, the general manager of the company, in Cleveland. Mr. Cottingham, by the way, is still a Canadian, as, in spite of a number of years' residence in the United States, he has never taken out his naturalization papers, remaining true to the land of his birth.

During the evening solos by Mr. Duquette, and recitations by Mr. McLaughlin, together with the Sherwin-Williams topical songs, helped to enliven the proceedings.

A feature of the banquet was the fact that the lady spectators in the gallery remained throughout the evening, taking a lively interest in the proceedings. Among the ladies in the gallery were Mrs. H. A. Sherwin, wife of the president of the company; Mrs. S. P. Fenn, Cleveland; Mrs. J. A. Garson, London; Mrs. Dixon Cottingham, Mrs. C. C. Ballantyne, Mrs. Yuille, Mrs. Trenholme, Mrs. Porter, and Miss Stevenson.

The gathering broke up by singing the national anthems of the British Empire and United States, and the special train carried away most of the delegates on Saturday afternoon.

CANADIAN OIL WELLS.

Robert Whitehead, an English oil expert with long experience in Siberia, is in Canada looking over the oil fields in Alberta. He represents an English syndicate, which owns 2,000 acres near Pincher Creek, Alberta.

The Great Northern Oil & Gas. Co.'s new oil well at Manitowaning, Manitoulin Island, gushed fully 15 feet in the air after a depth of 450 feet had been attained. Fourteen barrels were pumped in 20 minutes. The oil is said to be of very superior quality.

ANTI-TRUST AGITATION.

Owing to the high prices of turpentine from the Southern States, there is a strong movement developing in Great Britain favoring the purchase of turpentine produced in Canada and India in preference to the United States article. The British Government may be asked to make an appropriation to develop the industry in India.

The Couse-Rougie Co., doing a hardware and glassware business in Sarnia, have dissolved. Messrs. A. and N. B. Rougie will continue the hardware business and Mr. Couse the glassware branch.

Imperial Turps.

We do not claim it is pure Southern Turpentine, but we do know it is safe to use, and does not contain any injurious properties. This is more than we would like to say about some of the so called PURE in the market at present.

232 McGill Street,
Montreal, November 2, 1905.

PAINT markets for the past week have been remarkable for the good sized Fall orders which have been received and as usual everyone is in a hurry to get them shipped before Winter rates come into force. Some orders for shipment by boat are already too late, as the particular boat specified tooted her last whistle for the season in Montreal harbor last week.

Price changes are few and unimportant, but firmness is evidenced on all sides. There is no doubt whatever that the heavy demand will be a powerful factor in maintaining the present figures.

One of the features of the week has been the extraordinary call for putty, vermillions and varnishes.

Conditions in linseed oil are about the same as before. Stocks are ample so that there is no immediate prospect of the Canadian market going up in sympathy with the strength in England.

Turpentine — The predicted advance has not yet materialized. The market is firm at the following figures: Single barrel, 98c. per gallon. Two barrels or over, 97c. For smaller quantities than gallons, 5c. extra per barrel is charged. Standard gallon is 8.40 lbs. f.o.b. point of shipment, net 30 days.

Linseed Oil—Prices are steady, but as stocks are ample, no advance is looked for just now. Our quotations are as follows: Raw, one to four barrels, 45c.; five to nine barrels, 44c.; boiled, one to four barrels, 48c.; five to nine barrels, 47c., f.o.b. Montreal. Net 30 days.

Ground White Lead—We quote: Best brands Government standards, $5.50 to $5.65; No. 1, $5.25 to $5.40; No. 2, $4.90 to $5.15; No. 3, $4.65 to $4.90, all f.o.b. Montreal.

Dry White Lead—We quote: Barrels, $5.25; 100 lb. packages, $5.50; 6 or 10 lb. tins, $6.50.

Dry White Zinc — Prices are firmly held as follows: Pure dry in casks, 7c.; in 100-lb. kegs, 7 1-2c.; No. 1 zinc, in casks, 6c.; in 100-lb. kegs, 6 1-2c.

White Zinc—(Ground in oil) — We give the following prices: 25-lb. irons, 7 1-2c. to 10c.; No. 1, 6 1-4c.; No. 2, 5 1-4c.

Putty—There has been an extraordinary demand for this article during the past week. We quote: Pure linseed oil, $1.75 to $1.85; bulk in barrels, $1.50; in 25-lb. irons, $1.80; in tins, $1.90; bladdered putty in barrels, $1.75.

Orange Mineral—We give the following prices: Casks, 7 1-4c.; 100 lb. kegs, 7 1-2c.; smaller quantities, 8 1-2c.

Red Lead—In spite of a very strong and advancing market, it is likely that local jobbers will continue throughout the Winter to sell at the following prices. We quote: Genuine red lead in casks $4.50; in 100-lb. kegs $4.75; in less quantities at the rate of $5.75 per 100 lbs.; No. 1 red lead, casks, $4.25; kegs, $4.75, and smaller quantities, $5.50.

Gum Shellac—We quote: Fine orange, 55c. per lb.; med. orange, 50c. per lb.; bleached shellac (white), 60c. per lb.

Shellac Varnish—Our quotations are as follows: Pure white in barrels, $2.50 to $2.60; pure orange, $2.40 to $2.50; No. 1 orange, $2.35 to $2.45.

Mixed Paints—Our prices are from $1.20 to $1.40 per gallon.

Castor Oil—Large quantities are moving. We give prices: From 7 1-2c. to 8 1-2c., according to lot.

Refined Petroleum—Market conditions remain without change. There is a good brisk demand, and the turnover is improving with each week. We quote: American water white, 16 1-2c. and 17 1-2c.; Canadian prime white, 14 1-2c. and 15 1-2c.; 18 1-2c. and 19 1-2c. ex warehouse.

ONTARIO.

Office of HARDWARE AND METAL,
10 Front Street East,
Toronto, Nov. 10, 1905.

LINSEED oil has been advanced by some dealers as predicted last week. In England oil continues very firm while on the local market the mills at Baden have been forced to practically discontinue crushing owing to the difficulties of transporting seed from the Northwest. Large shipments have been held up at Sarnia owing to shortage of cars on the railroad but the blockade is being relieved somewhat and more oil will be on the market in a short time. These conditions have resulted in an advance of one cent by most dealers, but as stated before, some are still selling at the old figures.

Turpentine is slightly weaker on the markets in the south, but the conditions locally remain the same. The high prices have practically shut off the sales of turpentine dealers carrying very light stocks and small buyers purchasing only what is absolutely necessary. The volume of trade is therefore very small.

Shipments of petroleum have been very large owing to the near approach of the closing of navigation. Merchants in the back districts have been laying in stocks to carry them over until next spring and shippers have, therefore, been kept very busy. Penn. crude holds firm at the recent advances while Canadian crude has

strengthened considerably and is now quoted 2c. higher.

General business is very satisfactory for the middle of November, considerable white lead being sold while the trade in putty is exceptionally large. Glass is firm at the advances made recently.

White Lead—Ex Toronto, pure white, $5.55; No. 1, $5.12 1-2; No. 2, $4.75; No. 3, $4.00; No. 4, $4.25 in packages of 25 lbs. and upwards; 1-2c. per lb. extra will be charged for 12 12 lb. packages; genuine dry white lead, in casks, $5.00.

Red Lead—Genuine in casks of 560 lbs., $4.75, ditto, in kegs of 100 lbs., $5.00; No. 1, in casks of 500 lbs., $4.50; ditto, in kegs of 100 lbs., $4.75.

White Zinc—Genuine V. M., in casks, $6.50, in 25 lbs. $7.50, in 12 1-2 lbs. $8.00; Lehigh, in casks, $5.50, in 25 lbs. $6.00, in 12 1-2 lbs $6.50.

Shingle Stain—In 5-gallon lots 57 to 90c. per gallon.

Paris White—90c. to $1 per 100 lbs.

Whiting—60 to 65c. per 100 lbs.; Gilders' whiting, 75c.

Shellac Varnish — Pure orange in barrels, $2.80; white, $2.90 per barrel; No. 1 (orange), $2.25.

Linseed Oil—Our quotations are: Raw, 1 to 4 barrels, 47c. to 48c.; boiled, 50c. to 51c.; 5 to 9 barrels, raw, 46c. to 47c.; boiled, 49c. to 50c. Toronto, Hamilton, London and Guelph, net 30 days. Advance of 2c. for delivery to outside points.

Turpentine—Single barrel lots, $1; 5 gallon lots, $1.10 f.o.b. point of shipment, net thirty days. For less quantities than barrels, 5c. per gallon extra will be added, and for 5 gallon packages, 50c., and 10 gallon packages 80c. will be charged.

Glues—Broken sheet, in 200 lb. barrels, 5 to 25c. per lb.; cabinet glue, in barrels, 11 1-2 to 12c.; emery glue, in barrels, 15c.; bookbinders' ground, 11 1-2c.; finest American white, 19c.; No. 1 American white, 15c. per lb.

Putty—Ordinary, bladders in barrels, $1.65 to $1.75; pure linseed oil, $2 to $2.10; bulk in barrels, $1.50; pure, $1.95 to $2; 100-lb. kegs 25c extra.

Plaster Paris—New Brunswick, $2 per barrel.

Liquid Paints—Pure, $1.20 to $1.35 per gallon; No. 1, $1.10 per gallon.

Barn Paints—70c. to 80c.

Bridge Paints—75c. to $1.

Castor Oil—English, in cases, 8 1-2 to 9c. per lb., and 10c. for single tins.

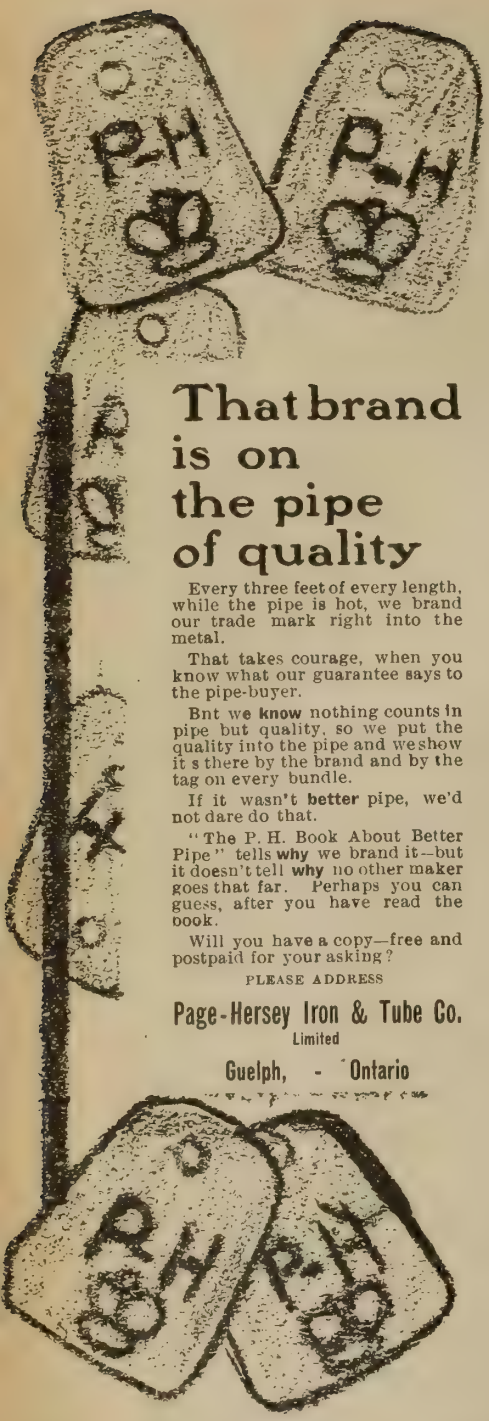
Refined Petroleum— Dealers in the back districts have been laying in their Winter supplies and shipments have been large. We quote: Canadian prime white, 14c.; water white, 16c.; American water white, 16c. to 18c. ex warehouse.

Crude Petroleum—Canadian crude has advanced 2c. Pennsylvania crude holds firm at the price listed. We quote: Canadian, $1.36; Pennsylvania, $1.61; Ohio, 94c.

Pittsburg manufacturers are likely to accept an invitation recently given them to pay a visit to Toronto and other Canadian points.

MONTREAL WINDOW GLASS.

Ships plying between this port and England and Belgium are now making their last trips to Canada for the season. It is not known how much glass these vessels will bring, but it is a sure thing that all this city will have to carry local jobbers through the Winter is now on the ocean. One thousand boxes of window glass ex Leyland liner's stranded vessel Virginian were sold at auction, Thursday afternoon, but even if the glass were in first class shape it couldn't relieve the situation to any great extent. We do not advance our prices this week, but are assured that our figures are much firmer than ever. It is impossible to get closer quotations than those given below: First break, 50 ft., $2.10; second break, $2.20; first break, 100 feet, $4.25; third break, 100 feet, $4.75; fourth break, 100 feet, $5; fifth break, 100 feet, $5.25; sixth break, 100 feet, $5.75; seventh break, 100 feet, $6.25; eighth break, 100 feet, $6.50. Diamond star, first break, 50 feet, $2.30; second break, 50 feet, $2.50; first break, 100 feet, $4.40; second do., $4.80; third do., $5.75; fourth do., $6.50; fifth do., $7.50; sixth do., $8, and seventh do., $9. Double thick, first break, 50 feet, $3.45; second break, $3.75; first break, 100 feet, $6.75; second do., $7.25; third do., $8.75; fourth do., $10; fifth do., $11.50; sixth do., $12.50; seventh do., $14; eighth do., $16.50; ninth do., $18; tenth do., $20; eleventh do., $24.00, and twelfth do., $28.50.



ORIGIN OF SHELLAC.

FEW people know that lac, from which shellac is manufactured, is an incrustation left on the branches of certain trees by insects in India. All Indian Provinces produce it, but principally the Central Provinces, Bengal and Assam. In other districts local dealers use if for making rings, beads, bracelets, and other ornaments, and also for wood lacquer work. The lac is collected by the jungle tribes, who break off branches on which it is deposited. In this form it is called stick lac. Manufacturers of shellac and button lac buy large quantities of it in this form and put it through the processes which prepare it for commerce. The United Kingdom and the United States are two great markets for it. Shellac has been used in electrical works and in making gramophone records of late, and, as the demand has exceeded the supply, the price is considerably higher.

FOREIGN LINSEED MARKET.

Despite the low prices of flax seed in England, as compared with the quotations of last July, the London market is still above an import basis for American seed. Shipments from India so far this year have been only about two-thirds of what they were a year ago. The light stocks would seemingly indicate higher prices, but while the market is strengthening somewhat, quotations are still about 10 per cent. lower than in July. With decreased supplies available in India, an export movement from America may develop.

AN UNPRECEDENTED RUSH OF FALL ORDERS PRECLUDES THE "WRITING UP" OF THE CANADA PAINT COMPANY'S WEEKLY CHANGE OF ADVERTISEMENT. ALL REQUISITIONS WILL, HOWEVER, BE WELL TAKEN CARE OF AND PROMPTLY SHIPPED.

That brand is on the pipe of quality

Every three feet of every length, while the pipe is hot, we brand our trade mark right into the metal.

That takes courage, when you know what our guarantee says to the pipe-buyer.

Bnt we **know** nothing counts in pipe but quality, so we put the quality into the pipe and we show it s there by the brand and by the tag on every bundle.

If it wasn't **better** pipe, we'd not dare do that.

"The P. H. Book About Better Pipe" tells **why** we brand it—but it doesn't tell **why** no other maker goes that far. Perhaps you can guess, after you have read the book.

Will you have a copy—free and postpaid for your asking?

INDUSTRIAL GOSSIP.

HARDWARE AND METAL would be pleased to receive from any authoritative source industrial news of any sort, the formation or incorporation of companies, establishment or enlargement of mills, factories, foundries or other works, railway or mining news. All correspondence will be treated as confidential when desired.

REPRESENTATIVES of a syndicate of American steel manufacturers are negotiating with the Fort William Board of Trade regarding inducements for the erection of a steel finishing mill, employing not less than 200 men at Fort William.

A large creosoting plant is to be established at Dartmouth, N.S.

John Wilson, Collingwood, will erect a pork packing plant in Edmonton.

J. S. Emerson, Vancouver, is building a new saw mill at Greenway Sound.

The Winnipeg Paint Co., Winnipeg, will erect a branch factory in Edmonton.

The Wolverine Cedar Lumber Co., Menominee, Mich., will erect mills at Spanish Mills.

The Canadian Flax Cordage Co. are negotiating with the town of Berlin for a factory site.

A representative of a Detroit company manufacturing rattan furniture has been looking for a site at Sarnia.

The Dominion Coal Co. has commenced work on a new building to be used as a foundry at Glace Bay. The cost will be over $25,000.

A match factory is to be established at Sarnia. The factory will be in connection with the Cleveland-Sarnia mills. It will give employment to 100 or more hands.

The Vinning Machine Co., manufacturers of concrete block machines, have located at Niagara Falls, and are installing machinery in a factory building they have secured.

The Russell Electric & Hydraulic Co., recently held a meeting at Chatham, N. B., and decided to undertake the manufacture of a new roller bearing invented by W. H. Russell.

Raymond, Alberta, is installing a water supply tank of 10,000 gallons capacity, operated by an air motor pumper. The outfit is being suplied by the Devlin-Tyrrell Co., of Winnipeg.

Messrs. Whalen & Bowman have closed an agreement with the town of Fort William in return for certain inducements, they have agreed to build a large machine shop and dry dock, employing fifty men.

The Dominion Coal Co. will apply to the Tariff Commission to protect the soft coal industry against British coal which is brought out as ballast and entered at a very low duty under the preferential agreement.

The lumber districts along the northern branches of the Rouge River, Que., are quiet this year, as the big lumber companies are cutting their wood only in the lower parts. This is rather seriously affecting the hardware trade in the upper districts.

The Canada Saw Co. are removing their factory into a larger premises at Ottawa. The statement that the company intend to remove from Ottawa is

THERE is a prominent feature in the sky of nearly every Canadian city and town just now, and that is smoke.

Where the "PEASE" is used it is not so noticeable. That is why the Pease

ECONOMY HOT-WATER BOILER

is so popular in Toronto and Winnipeg.

If you haven't sent in your orders to us as yet, post them at once and we will see that goods are started to you the same day as order is received.

PEASE FOUNDRY CO,, Limited

denied. The company intends to enlarge its factories in Toronto and St. John during the coming year.

Application is to be made to Parliament at its next session for an Act to incorporate the Buffalo, Niagara and Toronto Railway Company, with power to construct a railroad from Niagara-on-the-Lake to St. Catharines and Port Colborne. It is also to touch at Fort Erie.

Work has begun in grading the roadbed for the new railway between Three Rivers and Shawinigan Falls. The chief engineer in charge of the construction is Mr. Ross McRae, who is assisted by Mr. Burrell of Burrell's Siding. It is expected that the track will be laid as soon as the frost leaves the ground in the Spring.

The Manitoba Iron Works, Limited, of Winnipeg, have completed the water tower contracted for with the town of Portage la Prairie and Engineer Chipman has passed same as entirely satisfactory. This is the largest contract of the kind yet undertaken in Western Canada.

The Improved Match Co., Limited, is the name of a new enterprise that has been established by a number of prominent Montreal business men, with a capital of between $75,000 and $100,000. The company has purchased a large brick factory at Drummondville, where the works will be situated.

The Vancouver Nail Factory has been destroyed by fire, the loss being estimated at $100,000. The building had been erected against the Vancouver Engineering Works, and the exertions of the firemen were concentrated on one spot for the purpose of saving this big plant, which they ultimately did. The factory will be rebuilt.

The Dominion Coal Co. intend to instal quite an extensive electrical plant at their No. 2 colliery, near Sydney. The Canadian Westinghouse Company are the successful tenderers. Up to the present the company have been utilizing steam and compressed air, but it has been found that electrical transmission would be more economical and altogether an improvement.

The Hamilton Bridge Co. have secured the contract for the structural steel work for the new plant of the American Glass Co., at Cayuga. Before deciding to build at Cayuga the company had representatives make a thorough test of the sands available and the natural gas supply. The company has agreed to employ 400 men when the works commence operations next year and this number will likely be increased to 1,000.

The Australian Comptroller of Trade has notified the Canadian Department of Trade and Commerce that inland freight is added to the value for duty purposes only in the case of goods subject to an ad valorem duty. Goods entering at specific duties are exempt from the regulation. Last year less than one-half of the Canadian imports into Australia were subject to an valorem duty. It is argued, therefore, that the new Australian customs regulation will not affect Canada very seriously.

The Dominion Iron & Steel Co. has started on a 5,000-ton rail order for the Temiskaming Railway. Fifteen hun-

proves this. It is a marvellously cheap rifle and yet it is **efficient** and **reliable**—absolutely so. No complicated mechanism. All working parts interchangeable. No other rifle has a barrel just like **The Hamilton Rifle.** No other rifle can begin to compare with it in the matter of price—a very important matter.

You could sell **Hamilton Rifles** as well as other Hardwaremen. Won't you ask your Jobber about **Model No. 23?**

THE HAMILTON RIFLE CO.

DEPT. 71 **PLYMOUTH, MICH.**

dred tons of the I.C.R.'s 25,000-ton order have already been completed. The Dominion Steel Co. is reported to be arranging with the Nova Scotia Steel Co. for the exploration of submarine areas at Wabana. The N. S. Co. own areas lying outside those of the Dominion Co., and a slope will be driven down through from their present workings, which it is hoped will prove the existence of large and valuable bodies of ore in the areas of both companies.

Ground has been broken for the Atikokan Iron Co.'s new blast furnace at Port Arthur, Minn., and work on it will be rushed as fast as possible. The company's new equipment is being sent to Port Arthur as fast as it can be secured, and it is evidently the intention of the promoters to lose as little time as possible. They are said to be watching the test of electric smelting at the Soo with great interest, and if it proves a success there, it will probably be tried at the Atikokan properties. The experiment at the Soo is being conducted by the Canadian Government at an expense of about $15,000, and under the direction of Dr. P. L. T. Heroult, technical director of the French Electro-Metallurgical Society. The new blast furnaces will handle ore from the Atikokan range, and will have an annual capacity of something like 60,000 tons of foundry and Bessemer iron. It will be equipped with three Roberts stoves and will have a stack seventy-five feet high. A battery of coke ovens will be constructed near the furnace.

All the leading Canadian iron and steel companies have decided to petition the Tariff Commissioners that the maximum protection should be continued for different classes of iron and steel. While different committees have been appointed to prepare statements dealing with special classes, it is certain that the Government will be asked to extend the present sliding scale of bounties, in order that they should not run out in 1907. The main reason for this is that the bounties were given to enable the companies to get on their feet but for a considerable period both the Dominion Iron and Steel, and the Lake Superior Corporations, owing to their financial troubles, were unable to take proper advantage of the bonus bounties. One of the largest Canadian steel interests, stated that while the companies were doing fairly well at present, it could hardly be said they could meet outside competition. The industry was now in a fair way to becoming one of the greatest in the country, but Government assistance would be needed for quite a little time.

Companies Incorporated.

The corporate name of Canadian Ladder Co. has been changed to Robinson & Turner Mfg. Co.

The Great West Wire Fence Co., Winnipeg, share capital $100,000; purpose, to manufacture wire fencing. The directors are T. Black, W. A. Morkill, W. L. Belyea, W. M. Andrews, and C. W. Bradshaw, all of Winnipeg.

The Fleming Aerial Ladder Co., Toronto, share capital $100,000; purpose, to manufacture and deal in ladders and hoists. The directors are Thomas Wylie, George Henry Townsley, and Robert Fleming, all of Toronto.

The International Mfg. & Supply Co., Windsor, share capital $40,000; purpose, to make, construct, use and vend to others certain inventions. The directors are Leonard Walter Ashley, Walter Bong and Samuel Keal Peck, all of Windsor.

The James Robertson Co. have secured a charter in New Brunswick to carry on their plumbing supply business in the Maritime Provinces. The capital stock is $70,000, and the incorporators are J. H. M. Robertson, C. M. Robertson, A. M. McMichael, Jas Robertson, and A. Robertson, all of Montreal.

Canada Carb-ox Co., Winnipeg, share capital $30,000; purpose, to manufacture and sell the carb-ox system of smoke consuming apparatus. The incorporators are James Stuart, Jacob Nichols Yeomans, William Stephenson, all of Winnipeg, and Joseph Weller Hays, Chicago; and John Graham, of Winnipeg.

The Water Supply Co., Montreal, share capital $40,000; purpose, to promote and organize companies for the supply of water, gas and electric light. The incorporators are Maurice Rousseau, Montmagny, Que.; Arthur Eugene Brunet, William John White, Lacasse Rousseau, and Arthur William Patrick Buchanan, all of Montreal.

Business Changes

Ontario.

John P. Armstrong, blacksmith, London, has sold out.

Jacob Hessenauer, blacksmith, Port Elgin, lost by fire.

Patrick Lynch, blacksmith, Dacre, has been succeeded by F. Woodhouse.

A. Dawson, hardware merchant, Fort William, has sold out to S. Marlatt & Co.

Quebec.

Gougeon & Cote, hardware, Montreal (Verdun), registered.

Joseph Sarrazin & Fils, hardware merchants, Montreal, registered.

Mrs. Joseph Lafrance registered with Parent, Gaudais & Cie., plumbers, Sherbrooke.

There was a meeting of the creditors of Guenette Freres on November 6th. A. Lamarche curator.

Western Canada.

R. P. Sutherland, blacksmith, Grenfell, has been succeeded by James Dunn.

J. E. Tourigny, agricultural implements, Sintaluta, is giving up business.

G. W. Wickens, hardware merchant, Cayley, has sold out to Stinson & Smith.

Mutch & Hewitson, agricultural implements, Lumsden, have sold out to J. S. Wright.

A bailiff's sale was held of the property of George F. Rawles, plumber, Winnipeg.

Blythe & Clements, hardware merchants, Creelman, have succeeded Blythe & Wilson.

John Burnett, late agricultural implements, Sperling, has assigned to J. H. Haverson.

The stock of the estate of W. R. Johnson, grocer and hardware merchant, Winnipeg, has been sold.

The Bellamy Co., agricultural implements, Fort Saskatchewan, have been succeeded by W. M. Armstrong.

George Balfour, agricultural implements, Wolseley, is to be succeeded by Robert J. Campbell, December 1st.

CAPEWELL HORSE NAIL EXPANSION.

One of the important industries of St. John, N.B., was transferred last week, when the Capewell Horse Nail Company, of Hartford, Conn., obtained control of the Maritime Nail Works.

The Capewell Horse Nail Company is one of the largest of its kind in America, controlling perhaps a half of the trade in the United States. They are also anxious to get a grip on the Canadian trade, but as the tariff prevents their sending goods into the country so as to compete with domestic producers, they recently located a factory in Toronto and have now purchased a controlling interest in the Maritime Nail Works.

The Maritime Nail Works Co., Limited, were organized in 1895, with a capital of $50,000. They employ one hundred men and have always been a paying investment.

LONDON'S NEW LORD MAYOR.

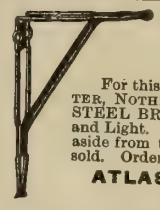
LAST month saw the installation of a new lord mayor in London, England, in the person of Alderman Walter Vaughan Morgan, the senior member of the firm of Morgan Bros., proprietors of the Ironmonger, the leading organ of the hardware and ironmongers' trade in Great Britain. Sir John Power, the retiring lord mayor, was also associated with the hardware trade.

Lord Mayor Elect Morgan is of Welsh descent, having been born in 1831. In 1855 he joined five of his brothers in establishing the firm of Morgan Bros., merchants and bankers, and originating the business of the Morgan Crucible Co., of Battersea. It will be seen, therefore, that in addition to being honored by election as lord mayor, Mr. Morgan also celebrates the fiftieth anniversary of the establishment of his firm this year. In 1859 the firm commenced the publication of the Ironmonger, later establishing the Chemist and Druggist, these being two of the earliest trades newspapers established in any country.

A NEW BUSINESS.

The Canada Smelting Co., Limited, have attracted attention by their enterprise lately, and they certainly deserve more than a passing reference for their babbitt metal, and more especially for the variety of lines handled, including phosphor tin, needle metal, type metal, plumbers' and tinners' solder and white metal mixtures. The firm is controlled by Mr. McClure, formerly of the Syracuse Smelting Co., Limited, and he has a reputation in the trade.

Their premises are located at the corner of Brennan and Ann streets, Montreal, and their possibilities must be guaged entirely by their influential connection and excellent facilities to do work.



MUNRO WIRE WORKS EXTENDING.

An extensive addition to their Winnipeg factory is being made by the Munro Wire Works. A new building of brick and stone is being erected on the site adjoining the factory, and in a few weeks the firm will have 12,000 additional feet of floor space. In all they will have 30,000 feet of floor space, and one of the finest manufacturing concerns in the west. Special attention will be paid to the manufacture of railway, farm and hog fencing.

A city store has branched out and has a "house tool" department. The window is attractive to every man. It contains wrenches, tack hammers, tack pullers, pliers, gimlets, saws, hammers, squares, etc.—all the ordinary tools that a man is likely to want around the home. Why don't you have a table devoted to these?

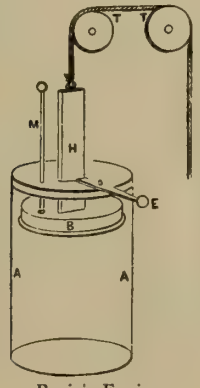
HEATING AND PLUMBING



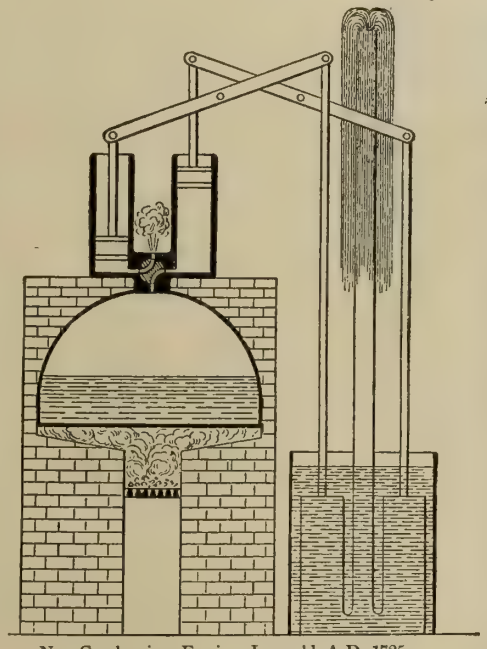
THE HARNESSING OF STEAM

By J. B. BERRYMAN, in Valve World.

(Continued from last week.)

Second Period.

IT will be noticed that up to the time of Savery a steam-engine, in the modern sense, had not been developed. The water elevators of Worcester and Savery would be called by us "apparatus," or "appliances," but the true engine, capable of transmitting the force of steam directly to a resistance to be overcome, had not, up to the year 1700, been produced. In order to follow each link in the chain of development it will be necessary to go back to 1678, at which time Jean Hautefeuille, of France, proposed a gunpowder engine, in which the pressure of the gases of explosion were to drive a piston in a cylinder. This, so far as is known, was the first time the idea of a moving piston in a heat engine was advanced, and the suggestion materially advanced the future development of the steam engine. The idea was further elaborated by Huyghens, who built a gas engine, the explosive agency being gunpowder. The explosion of the powder drove the air out of a cylinder, under a piston which was open to the atmosphere on one side. When the products of combustion cooled a partial vacuum was formed, and the atmospheric pressure drove down the piston, which, through the medium of a cord and pulley, performed a certain amount of work. Huyghen's explosive engine was further developed by Denis Papin, who had been assistant to the inventor in Paris. Papin abandoned gunpowder as a source of power, and raised the piston by steam power, afterwards permitting the steam to condense, so that the pressure of the atmosphere forced the piston down. This was the first steam engine with a piston, and the first piston steam engine in which condensation was used to secure a vacuum.

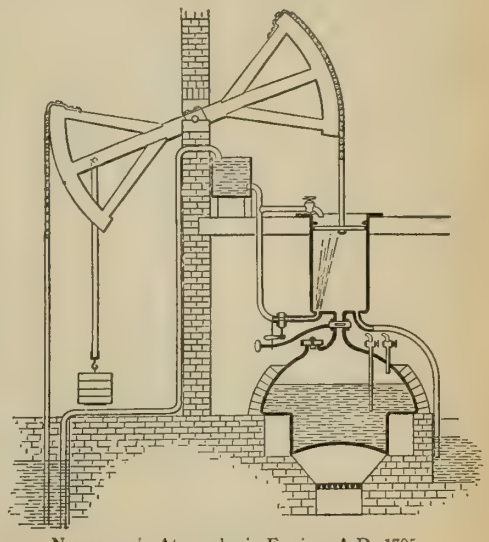


Papin's Engine.

Papin's Engine.

The illustration shows the crude form of this early attempt. A small quantity of water was placed at the bottom of the cylinder, A, a fire was built beneath it the bottom being made of very thin metal, and the steam formed raised the piston, B, to the top where the latch, E, engaging a notch in the piston rod, H, held it up until the operator was ready for the down stroke. The fire being drawn the steam condensed, the latch was disengaged and the atmospheric pressure produced another stroke. The piston speed was about one stroke per minute.

In 1705 Newcomen, a blacksmith of Dartmouth, England, assisted by John Calley, a glazier, made the piston engine a practical success by separating the boiler from the cylinder, and using



Non-Condensing Engine, Leupold, A.D. 1725.

artificial means of condensation, as Savery had previously done. The Newcomen engine was, in fact, a development from the experiments of Papin and Savery, but Newcomen was the first man to combine previously known elements so as to produce practical results.

Newcomen's Atmospheric Engine, 1705.

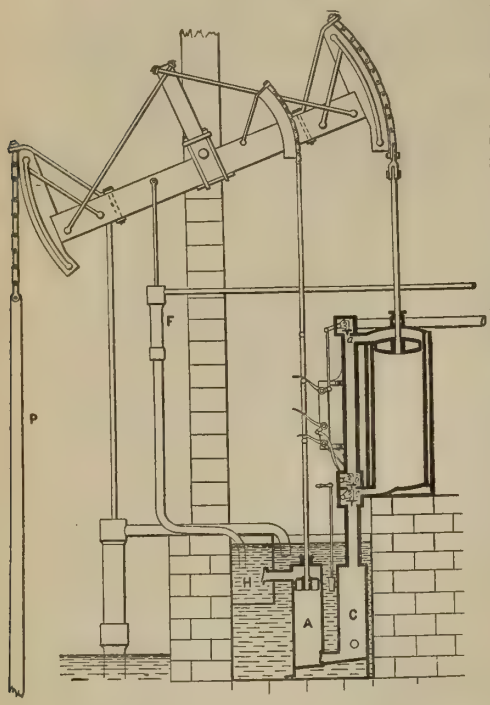
The illustration makes the operation of this engine sufficiently plain. It will be noticed that the steam was condensed by a jet of cold water. In the first engine condensation was effected by cooling the outside of the cylinder, but some leakage of water past the piston accidentally showed the advantage of a jet of injection water, and this plan was substituted for surface condensation in all subsequent machines.

The original engines were probably not automatic, but an old print of an engine erected in 1712 shows a kind of automatic gear. The story goes that in 1713 a boy—one Humphrey Potter—be-

Newcomen's Atmospheric Engine, A.D. 1705.

coming weary of opening and closing valves on an engine he attended, the duty being one which would natutally pall upon a youthful mind, made the machine automatic by attaching the various valves, or cocks, to the walking beam by means of cords and levers. The Newcomen engine was later improved in mechanical details by Henry Beighton and John Smeaton, and continued to be the standard pumping engine until the time of Watt. It was, owing principally to the alternate heating and cooling of the cylinder, a vast consumer of fuel, but this did not prevent a large number being used, mainly for pumping water from mines. In 1767 Smeaton reported 57 engines at work near Newcastle alone, aggregating 1,200 horsepower.

In 1725 a high pressure, non-condensing engine was described by Leupold in his "Threatrum Machinarum," which was probably the first of its kind. The following illustration is sufficiently clear.



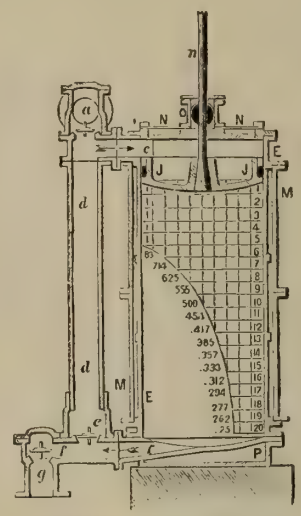
Leupold Non-Condensing Engine.

The machine does not appear to have been developed commercially, the reason being, no doubt, that with the knowledge of boiler-making and piping then available, and the utter lack of suitable materials, a machine could not be constructed to work safely under a comparatively high pressure.

James Watt.

The steam engine had been slowly developed to a point where it could be used commercially for the purpose of pumping water, but its small power, in comparison with the size of the parts and the extraordinary consumption of fuel, limited its field of usefulness. It remained for James Watt to elucidate the correct principles of steam engineer-

ing, and so improve upon the mechanism of the engine itself that it could be widely utilized as a prime mover, and become the most potent element in the industrial development of the world.



Watt's Single-Acting Engine, A.D. 1769.

Space will not permit an extended biography, but a few facts bearing upon his early life and training will be of interest. Watt was born at Greenock, a small Scotch village, January 19, 1736. His grandfather, Thomas Watt, was a well-known mathematician and schoolmaster. His father was a prominent citizen of Greenock, and at various times was chief magistrate and treasurer of the town. James Watt was a bright boy, but so delicate in health that he was unable to attend school regularly or apply himself to study, and consequently his early education was given him principally by his parents, who were people of intelligence. At about fourteen years of age he commenced to forge ahead in the village school, excelling in mathematics. During his spare time he made many ingenious pieces of mechanism, among other things a barrel-organ, and showed marked ability with tools, working both in wood and metal. At the age of eighteen he was sent to Glasgow to learn the trade of a mathematical instrument maker, but soon went to London, where he worked for John Morgan at instrument making for a year, when his health failed and he had to return home.

The following year he again went to Glasgow with the intention of opening a shop, but the guilds, or trades unions, would not permit him to do so, and Dr. Dick, of the University of Glasgow, came to his aid and gave him employment at the university, repairing and overhauling the scientific apparatus belonging to the college. There he remained nearly four years, making philosophical experiments and manufacturing musical instruments. In order to make himself more familiar with the science of acoustics he studied German and Italian. Watt also studied chemistry, assisted by Dr. Black, who was then engaged in making researches which resulted in the discovery of "latent heat."

At this time it was proposed that he repair the model Newcomen engine in the college collection, and this led him to make a study of the few treatises then existing on steam, and to become familiar with what had already been accomplished in the way of its application to useful work. After putting the engine in working order he commenced to experiment with it in 1764, and was struck with the waste of steam due to the alternate chilling and heating of the cylinder. He saw that the remedy was to keep the cylinder as hot as the steam which entered it, and as this was impossible with a condensing jet of cold water in the cylinder itself, he added to the engine an entirely new feature—a separate condenser — into which the steam should be allowed to escape to be then condensed by a jet, or external application of water. To preserve the vacuum, he added an air pump to remove from the condenser the water of condensation and whatever air there might be. His next step was to steam-jacket the cylinder, bringing the piston rod out through a stuffing box, and allowing steam, instead of air, to press

Expansion of Steam by Watt.

upon the upper surface of the piston. These improvements were patented in 1769.

Watt's Single-Acting Engine, 1769.

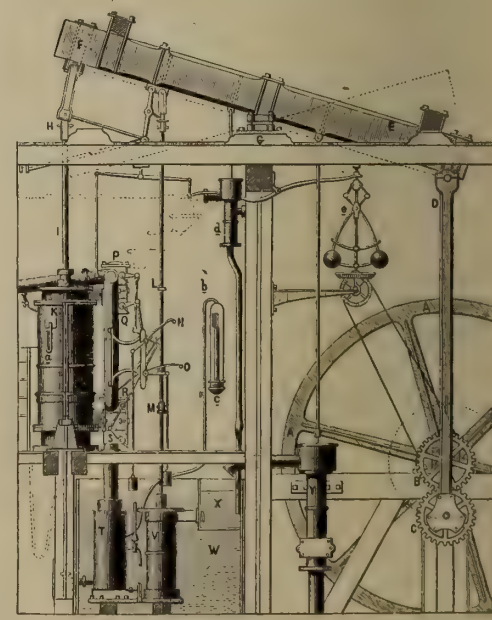
The illustration is an example of this period. The engine is still single-acting, and although the top of the piston is closed and steam is admitted above the piston, this was only done to keep the cylinder warm, the steam merely taking the place of the atmospheric pressure, and it is the lower end of the cylinder only which is put in communication with the condenser. There are three valves, the steam valve, a, the equilibrium valve, b, and the exhaust valve, c. At the commencement of the down stroke c is opened to produce a vacuum below the piston, and a opens to admit steam. At the end of the down stroke a and c are shut and b is opened. This puts both sides of the piston in equilibrium, and the piston is pulled up by the weight of the pump rod, p.

In 1781 Watt obtained a patent for the so-called "Sun and Planet" wheel method of making the engine give continuous revolving motion to a shaft provided with a fly-wheel. The crank and connecting rod was a device well known at that time, through being used on the foot lathe, but the application of the crank to a steam engine had already been patented by one Pickard, so that Watt could not use it until the expiration of the patented term.

In 1782 another patent was issued to Watt, covering principles of great importance. The patent included :

1st. The expansion of steam and six methods of applying the principle and equalizing the expansive power.

2nd. The double-acting steam engine, in which the steam acts on each side of the piston alternately, the opposite side being in communication with the condenser.



3rd. The doubled, or coupled, steam engine—two engines capable of working together, or independently.

4th. The use of a rack on the piston rod, working into a sector on the end of the beam, thus securing a perfect rectilinear motion of the rod.

5th. A rotary engine, or "steam wheel."

Watt studied and developed the working of steam expansion, and suggested a cut-off at quarter stroke as being the most economical, and in a communication to Dr. Small illustrated the idea by a sketch similar to the following :

Among the other inventions of Watt were the water gauge, steam engine indicator, ball governor, the poppet valve with beveled seat, throttle valve, similar to our present butterfly valve, cross head and guides, for engine piston rods, a steam hammer, and the revolution counter. This remarkable man left the steam engine a complete machine, and while countless investigators have added to our scientific knowledge, ingenious mechanics working with better material and tools have refined and developed, still the engine of to-day embodies all the essential features of the machines which his intellect created.

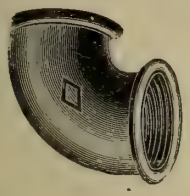
Watt's Engine, 1781.

James Watt died August 19, 1819, in the eighty-third year of his life, and a monument was erected to his memory in Westminster Abbey, upon which there is engraved the following noble epitaph :

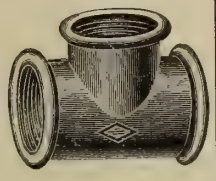
CHURCH'S ALABASTINE—The Permanent and Sanitary

WALL-COATING

On the Canadian market more than twenty years—Company incorporated in 1885.



ALABASTINE is recommended by all who sell or use it and endorsed by leading sanitarians for the walls of **any building**, and especially for bed-rooms, living rooms, sick rooms, hospitals, etc. It is fire-proof and very desirable for the interior of factories, and as a primer for exterior painting, **especially on old weather-beaten buildings.**



ALABASTINE is systematically and persistently advertised, and sells on its **own merits**. Money invested in Church's Cold Water **ALABASTINE** returns again with the addition of a good profit; customers are satisfied and there is no risk of accumulating stock that won't sell.

See that stock is complete in all colors. Short any one shade might mean loss of sale and possible loss of customer.

Order this fall. Spring dating. "Do it now" from jobber, or direct from The Old Reliable

Boulton & Watt's Double-Acting Engine, A.D. 1784

NOT AN AGNOSTIC.

NOT long ago a certain clergyman from the west was called to a church in Jersey City. Soon after his arrival the divine's wife made the usual visits to the members of the parish. One of these, a plumber's wife, was asked by the good lady whether the family were regular churchgoers, whereupon the wife of the plumber replied that, while she and her children were attendants at divine service quite regularly, her husband was not.

"Dear me," said the minister's wife, "that's too bad. Does your husband never go to church?"

"Well, I wouldn't say that he never went," was the reply. "Occasionally Will goes to the Unitarian, now and then to the Methodist, and I have known him to attend the Catholic church."

A look of perplexity came to the face of the visitor. "Perhaps your husband is an agnostic," suggested she.

"Not at all," hastily answered the other; "he's a plumber. When there is nothing for him to do at one church there is very likely something for him at one of the others."

PLUMBERS' CASES IN COURT

KALEIDOSCOPIC changes in the situation of the law cases in which Toronto master plumbers and plumbing supply men are interested make it difficult to keep track of where the prosecution is really at. The conspiracy charge against certain members of the Master Plumbers' Association and the Journeymen Plumbers' Union came up for its adjourned hearing this week but no evidence was taken and another week's adjournment was made. In the meantime, however, the Attorney-General's Department has taken the matter in hand and Crown Prosecutor DuVernet has practically taken the matter away from the Police Court and brought it before the Criminal Assizes. One effect of this is understood to be that if convictions are secured the penalties are more likely to be in the nature of fines than imprisonment.

* * *

In addition to the Crashley case, traversed from the last assizes, three other indictments for conspiracy have been made, all these being brought before the Grand Jury on Wednesday, the jury returning true bills in every case. The trials will commence immediately but it will be impossible to report them in this week's issue.

In the first indictment the Master Plumbers' and Steamfitters' Co-operative Association and the Central Supply Association of Canada are charged with conspiring and combining to limit the supply of commodities and to restrain trade. Then James J. McKittrick, Joseph Harrison, J. H. Wilson, Frederick Armstrong and William Mansell, the incorporators of the former organization, and the Master Plumbers' and Steamfitters' Association are alleged to have "unlawfully, fraudulently and deceitfully conspired and agreed" to defraud persons requiring work done for them, by arranging in secret at what price the work should be done for, and by causing to be delivered to such persons by plumbers, members of the association, false tenders for doing the work. The third bill deals with the alleged arrangement between masters and men. It charges individuals mentioned in the former charge with conspiring with William Bush, James Richards, A. McBain, Peter McCann and John Priestly to prevent plumbers and steamfitters, workmen or journeymen, working for any firm except members of the Master Plumbers' Association. Lastly, Richard Crashley is indicted for uniting with the Master Plumbers' Association to restrain competition and limit supply.

The witnesses in the cases will be: James B. Berridge, Oliver Brock, Alfred Brock, Thomas G. Barrington, John Kilgour, James N. Hayden, S. J. Grier, Thomas Head, Edward Currie, W. H. Meredith, Frank J. Nixon, George W. Guest, Wm. Porter, Richard Begley, Walter Hurst, James Hurst, James Sherlock, William J. Storey and George F. Watson.

* * *

"Every person who is in any way implicated will be proceeded against," said Mr. DuVernet. "It does not matter whether it be an individual or a corporation. The Police Court has no power in the matter, and all that the magistrate can do is to send the case on to the Assize Court. I do not want the case held over until the Assizes next year, and I am working hard every night to get the matter through. I shall proceed against any or every individual member of the association, as well as the association itself, if I find the evidence warrants such a course."

Judge Clute in giving the case to the Grand Jury said the mere uniting together for an unlawful act would be sufficient to constitute a conspiracy. The Criminal Code considered it an indictable offence and an individual was liable to a fine not exceeding $4,000 or two years' imprisonment, or a corporation to a fine of $10,000 and not less than $1,000 for conspiracy with any person, railway, steamship or transportation company

(a) To unduly limit facilities for transportation, producing, manufacturing, storing or dealing in any article or commodity which may be a subject of trade or commerce.

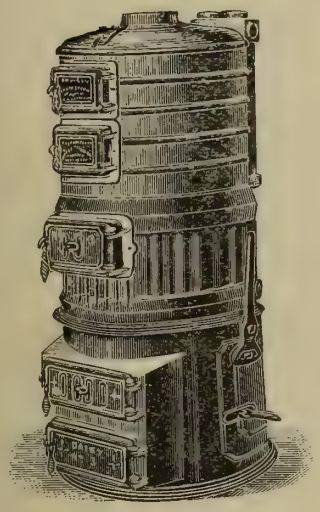
(b) To restrain or injure trade or commerce in relation to any such article or commodity.

(c) To unduly prevent or limit the manufacture of any such article.

(d) To unduly prevent or lessen competition in production or sale of a commodity.

The bringing of the cases before the Assizes will facilitate the settlement of the dispute, rather than allowing it to drag on in the Police Court for months before coming up for trial. Valuable time will thus be saved the witnesses and the accused, days having already been lost by many in waiting for an opportunity to give evidence.

So far the majority of those concerned in the charges have wisely left the talking to be done by outsiders. The association's side has not yet been heard, in consequence, and the public are likely to hear much in the evidence presented which will show the absurdity of much of the talk that has been going on in the newspapers.



In their effort to secure evidence the Crown officials have visited the offices of the Supply Association, the Master Plumbers' Association and the union during the past week. The minute books of the various organizations have been taken as well as a card index system belonging to the masters' organization.

* * *

Amongst the many foolish articles appearing in the sensational daily newspapers, one published in last Saturday's Toronto Telegram was certainly the limit in its absurdity. The writer built up a very good-looking straw man and proceeded to tear him to pieces in a most scientific manner. Figures were juggled with in a most amusing manner, the number of master plumbers in the association being given as 130, the average business done as $20,000 yearly, the 5 per cent. to the association as $130,000 yearly, 15 per cent. overcharge on all business being added to this amounting to $390,000 yearly, the total overcharge made to the public amounting to $520,000 yearly according to the Telegram's mathematician. Another gem in the article was the statement that as the entrance fee into the Master Plumbers' Association was $100 and as there were over 100 members there was over $100,000 in the treasury. The Telegram had the plumbers wallowing in wealth,

The NATURO Closet

does the rest, bringing you a large volume of business.

The NATURO Company

C. H Muckenhirn, President.

Salem, N.J.

but the article doesn't jibe with the facts at all and if a few more of these articles were published public sympathy would soon be switched back to the association.

* * *

Peculiar as it may seem, a large percentage of the master plumbers welcome this investigation. They are being held up as robbers by the general public, whereas they are not making any more than the legitimate profit made by other tradesmen and necessary to secure a living and pay accounts falling due. Indeed, in some cases master plumbers have been unable to get along without hiring themselves out as journeymen to other master plumbers. These men are believers in organization and knowing they have done nothing to merit public censure are desirous of seeing the matter fully threshed out at the earliest opportunity.

* * *

It is impossible to predict what the outcome of the legal action will be and Hardware and Metal will not indulge in any predictions. Certain it is, however, that the talk of holding back jobs will not result in the gain to builders that the newspapers claim it will. The higher price of materials and of labor is responsible for increased prices in the plumbing trades just as it has brought about higher prices in other branches of industry.

LONG DISTANCE HEATING PLANT.

A LONG-DISTANCE steam heating plant, where the source of heat and the place of consumption are 2½ kilometers distant, has been completed in the Eglfing Sanatorium, in Upper Bavaria. The steam conduits are arranged in a concrete tunnel, the walls of which are lined with an asphalt coating, which in connection with a cork slab vault minimizes the loss of heat by radiation. The pit is sufficiently wide to allow a man to stand and walk within it. It is lighted at intervals from above by daylight, and by small electric lights during the night. A novel substance consisting of charred silk threads has been used to surround the conduits and protect them against heat losses. The steam entering the conduit at 159 degrees C. was found to have a temperature of 152 deg. after covering the 2½ kilometers distance. The buildings themselves are heated by hot water, the steam serving only to heat the water boilers by means of coils. The plant is provided largely with electrical long-distance signaling apparatus, so as to allow of its being controlled and adjusted from the boiler house. Thirty pavilions and six administration buildings have been connected to this extensive plant, the cost of installation of which, including the tunnel, was about 250,000 marks.

ARTIFICIAL RAIN.

The Lake Shore Railroad is testing an apparatus invented by one of its engineers and designed to cool the air in the trains, and at the same time rid it of dust and other impurities.

The new cooling apparatus consists of a sort of huge atomizer, so constructed that at stated intervals gusts of cool and moist air, coming directly from a freezing plant, will be blown through the cars. This method is considered superior to the electric fan, which merely stirs the dust-laden and vitiated air.

The air which is blown out by this atomizer is drawn in from the outside, filtered, and is then circulated around the pipes in the refrigerating plant. At the same time it is moistened by the mingling of fine sprays of pure water. The moistening of the air is one of the most important features of the apparatus. It is claimed that the moisture collects the dust particles and precipitates them.

PLUMBING GOSSIP.

Contracts have been secured by the Taylor-Forbes Co. to install Sovereign radiators in the new McClary Mfg. Co.'s building on King street west, Toronto, and also in the re-modeled National Hotel at the corner of King and Sherbourne streets, Toronto. Sovereign radiators are increasing in popularity wherever they are known.

The Canada Foundry Co. have been awarded the tender for 8 and 12-inch valves for the high pressure fire system for the city of Toronto, and M. & L. Samuel Benjamin & Co. got the tender for the 20-inch valves.

The following notice has been printed in the Montreal papers: "From Monday, the 13th of November instant, and each second Monday thereafter, until otherwise ordered, between the hours of 2 and 5 o'clock in the afternoon, there will be held examinations for master and journeymen plumbers, at the health office, in the city hall.—J. E. Dore, chairman."

E. A. Chamberlain, Los Angeles, Cal., has a recent invention which is an improvement in that class of acetylene gas generators in which means are provided for automatically regulating the supply of water to the carbide in accordance with the pressure of gas required. There is no liability of overheating the apparatus, and it can be easily and quickly cleaned and recharged with carbide and water.

The James Morrison Brass Mfg. Co., Toronto, have negotiated a 999 year lease of the block of land lying at the southeast corner of Adelaide and York streets. This property has a frontage on York street from Adelaide to Pearl, and extends back 204 feet to a lane. The agreement for lease which has been signed by the company provides that for the first twenty-one years an annual rental of $5,000 shall be paid, and upon the expiration of that term arbitrators shall make a new adjustment. The company intend erecting a large factory on the site, but plans are yet in a crude state. The present factory has been outgrown.

Some amusement was caused in London, Eng., recently, when it was discovered that there was a leakage from one of the underground electric cables, and that persons standing or walking near the spot received a shock. Two horses brought to a standstill near the place were rendered so restive that they had to be removed, whilst a donkey danced about excitedly until it got beyond the affected area.

DAMAGES AGAINST UNIONS.

A LAW case which in some respects is very similar to the phase of the present plumbers' difficulty in Toronto, referring to the right of union men to boycott an employer in preference to other employers, is that of the suit of the Metallic Roofing Company against the Sheet Metal Workers' Union. The case is of interest to plumbers because J. B. Reeves, an ex-member of the Toronto Master Plumbers' Association, has charged members of the Journeymen Plumbers' Union with conspiracy for attempting to prevent union men from working in his shop.

The Metallic Roofing Company is suing the Amalgamated Sheet Metal Workers' Union for damages to the extent of $10,000. In 1902 an agreement was drawn up by Local Union No. 30 of the Amalgamated Sheet Metal Workers' International Association. The main clause of the agreement was "That no non-union workman should be employed by the company unless the union was unable to supply union men." This agreement was signed by all metal-working firms except the Metallic Roofing Company. An ultimatum was finally sent on August 4th, 1902, to the company, in the shape of a letter, which gave them till 12 o'clock (noon) on August 7th to comply with the request and sign the agreement. This the company refused to do, and the union called out the men who were employed by the company and passed a resolution against the establishment.

The Metallic Roofing Company claimed that great damage was done their business by intimidating letters and malicious statements. Both workmen and customers were approached by the union men. The case was fought through the courts for three years, a verdict for $7,500 damages being finally granted the company by the Civil Jury Assize Court. The following questions were put to the jury and answered by them, the verdict being brought in after one hour's conclave:

1. Were the workmen of the plaintiff company wrongfully and maliciously coerced to leave its employment by the defendants or any of them?

Answer—Yes.

2. If you answer the above question in the affirmative, state which of the defendants induced them?

Answer—By motion of Local Union No. 30, endorsed by the International Association, the parent society.

3. Did the defendants conspire by threats or intimidation to induce the plaintiff's customers, who would otherwise have dealt with the plaintiffs, to refrain from dealing with them and did they in consequence refrain?

Answer—Yes.

4. Did any of the plaintiff's workmen who were members of the union vote for the resolution to call out the union workmen from plaintiff's shops?

Answer—We cannot tell from the evidence.

5. If you answer in the affirmative can you say how many of them voted for such resolution?

Answer—Cannot answer.

6. If you find the plaintiffs are entitled to recover damages by reason of the defendants' acts, at what sum do you assess such damages?

Answer—$7,500.

MUELLER GROUND KEY WORK

No. 49 STOP AND WASTE COCK

C-139

If the plug of a stop cock hasn't efficient protection dirt may lodge around it and work down the side, causing trouble.

In Mueller Stop Cocks the cap fits close around the plug, effectually preventing dirt from lodging about it. No trouble is experienced with them from this cause.

Mueller Stop Cocks are made in solid handle, socket head and patent cap patterns and in all styles of pipe connection. The cock illustrated is the patent cap pattern, iron pipe style.

Each cock is carefully inspected and assembled, is given a 200-pound hydraulic pressure test as near like actual service use as possible, bears the Muller trade mark and is *unconditionally guaranteed.*

We also make compression work and fuller work for plumbers' use. Catalogs upon application.

PLUMBING MARKETS

QUEBEC.

Office of HARDWARE AND METAL,
232 McGill Street,
Montreal, November 10, 1905.

GREAT activity is manifest in plumbing circles, contracts of good size being numerous. Many residences which are not quite completed, are being boarded up to enable plumbing operations to be carried on. Soil pipe and fittings are required in large quantities to meet these conditions with the result that there is a great run on the goods named. Producers are meeting the demand satisfactorily, but there is, nevertheless, great firmness in the market.

As we foresaw in our last issue, lead pipe has been forced up in response to the strength in pig lead, which has held remarkably firm, at the highest price reached in over a year. The discount on lead pipe is now twenty-five per cent. only.

The scarcity in iron pipe has become more acute than ever and there is scarcely a size in which it is not difficult to cover the orders on hand. This scarcity has not as yet, however, advanced the prices any higher than those quoted a couple of weeks ago.

Iron pipe fittings are also still feeling the scarcity which was noted previously, a fact which tends to firmer price conditions.

Range Boilers—Business is normal and at unchanged prices. We quote: Iron clad, 30 gallon, $6.00, and 40 gallon, $7.50 net; copper, 30 gallon, $22.00; 35 gallon, $24.00; 40 gallon, $28. The discount on copper boilers is 15 per cent.

Lead Pipe—The strength of pig lead has finally compelled manufacturers and jobbers to advance prices on pipe. We quote as follows: Discounts twenty-five per cent f.o.b. Montreal, Toronto, St. John, N.B., and Halifax; f.o.b. London, 15c. per hundred lbs. extra; f.o.b. Hamilton, 10c. per hundred lbs. extra.

Iron Pipe—The scarcity in iron pipe is becoming quite serious. Nearly all sizes are now affected. Our prices however, are unchanged. We quote: Standard pipe, in lots of 100 feet, regular lengths, 1-4 inch, $5.50; 3-8 inch, $5.50; 1-2 inch, $8.50; 3-4 inch, $11.50: 1 inch, $16.50; 1 1-4 inches, $22.50; 1 1-2 inches, $27.00; 2 inches, $36.00; discounts on black pipe, 1-4 inch, 62 per cent.; 3-8 inch, 62 per cent.; 1-2 inch, 72 per cent.; 3-4 inch, and upwards, 74 per cent. Discounts on galvanized pipe: 1-4 inch, 47 per cent.; 3-8 inch, 47 per cent.; 1-2 inch, 62 per cent.; 3-4 inch and upwards, 64 per cent. Extra heavy pipe of 100 feet lots are quoted as follows: 1-2 inch, $12.00; 3-4 inch, $15.00; 1 inch, $22.00; 1 1-4 inches, $30.00; 1 1-2 inches, $36.00; 2 inches, $50.00. The discount for black pipe is: 72 1-2 per cent., and for galvanized, 61 per cent.

Iron Pipe Fittings—With a brisk demand and a rather short supply prices are firming. We quote: Discounts on all sizes of nipples up to six inch, 67 1-2 to 70 per cent.

Soil Pipe and Fittings—Orders are unusually heavy this week. There are many jobs on hand which require these goods. Our quotations are as follows: Standard soil pipe, 50 per cent. off list. Standard fittings, 50 and 10 per cent. off list; medium and extra heavy soil pipe, 60 per cent. off. Fittings, 60 per cent. off.

Solder—Market is unchanged. Our prices still are: Bar solder, half-and-half, guaranteed, 21c.; No. 2, (wiping solder) 17c.

ONTARIO.

Office of HARDWARE AND METAL,
10 Front Street East,
Toronto, November 10, 1905.

ADVANCES predicted in previous issues have materialized, we being able to report some this week while others will not be announced for a few days. Brass goods show several changes, and lead pipe has also been moved up. Some houses are also quoting higher on sheet lead. Prices have been withdrawn on Canadian enamelware and some lines of closets have been advanced already.

Several dealers have advanced their iron pipe quotations in response to the manufacturers' advance reported last week, but some continue to sell at the old figures.

Business continues active and large shipments of goods are being made. Soil pipe and fittings are increasing in activity owing to the rush of work before frost. Heating goods are also particularly active, the low prices of pipe, etc., having induced some heavy buying.

Lead Pipe—The expected advance has been made, lead pipe being now quoted at a straight discount of 25 per cent. Our quotations are as follows: Lead, 7c.; lead waste pipe, 8c.; discount, 25 per cent.

Soil Pipe and Fittings—Buying is very active owing to the rush of opening the ground before it is frozen up. Our quotations are as follows: Medium and extra heavy pipe and fittings, 60 per cent.; 7 and 8 inch pipe, 40 and 5 per cent.

Iron Pipe—Several dealers are still selling at the cut prices, but the market is firmer and the advanced quotations given below are ruling prices. We quote: as follows: Black, 1-4 inch, $2.09; 3-8 inch, $2.09; 1-2 inch, $2.38; 3-4 inch, $2.99; 1 inch, $4.29; 1 1-4 inch, $5.85; 1 1-2 inch, $7.02; 2 inch, $9.36; 2 1-2 inch, $15.75; 3 inch, $30.50; galvanized 1-4 inch, $2.92; 3-8 inch, $3.08; 1-2 inch, $3.53; 3-4 inch, $4.14; 1 inch, $5.94; 1 1-4 inch, $8.10; 1 1-2 inch, $9.72; 2 inch, $12.96; 2 1-2 inch, $23.00; 3 inch, $30.

Iron Pipe Fittings—Prices are firmer, but a large trade is being done. We quote as follows: Cast iron, elbows, tees, crosses, etc., 65 per cent.; cast iron plugs and bushings, 65 per cent.; flange unions, 65 per cent.; nipples, 75 per cent.; iron cocks, 60 per cent.; Canadian malleable, 35 per cent.; American malleable, 25 per cent.; malleable unions, 65 per cent.; malleable bushings and plugs, 60 per cent.; C. I. ceiling plates, plain or N. P., 70 per cent.; C. I. floor, 80 per cent.; hookplates, 60 per cent.; expansion plates, 65 per cent.; headers or branch tees, 65 per cent.; ring hangers, black or galvanized, 60 per cent., American list.

Galvanized Iron Range Boilers—Demand for boilers is very brisk as many contracts are being completed. We quote: 12 gallon capacity, standard, $4.50; extra heavy, $6.50; 18 gallon, standard, $4.75; extra heavy, 6.75; 24 gallons, standard, $4.75; extra heavy, $6.75; 30 gallon, standard, $5; extra heavy, $7.50; 35 gallon, standard, $6; extra heavy, $9.50; 52 gallon, $11; extra heavy, $14; 66 gallon, standard, $18; extra heavy, $20; 82 gallon, standard, $21; extra heavy, $24; 100 gallon, standard, $29; extra heavy, $34; 120 gallon, standard, $34; extra heavy, $40; 144 gallon, standard, $47; extra heavy, $55. The discount on copper and range boilers continues at 15 per cent.

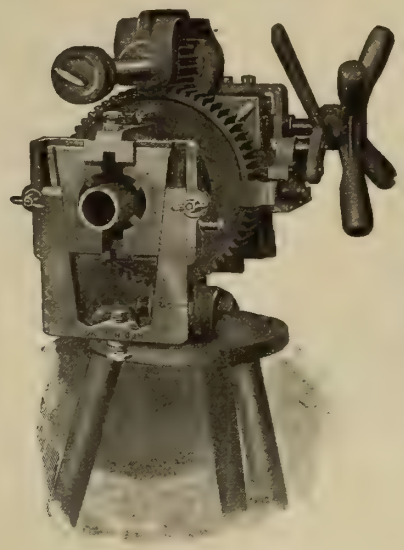
Solder—Higher prices for solder as lead and tin are both jumping upward. We quote: Bar solder, half-and-half, guaranteed, 19 1-2c.; refined, 18 1-4c., and wiping at 17 1-2c.

Enameled Ware—Advances are reported on certain lines of closets while the Standard Ideal Sanitary Co. have withdrawn their quotations on Canadian ware preparatory to an advance.

THE GLASS PLUMBER.

Attention is called in the Technical World to the fact that the introduction of the vacuum-tube light has brought into existence a new trade—that of "glass plumbing." The glass tubes, in which the light is produced by an electric current flowing through a gaseous conductor, are an inch and three-quarters in diameter, and are put up in lengths of about eight and a half feet, and hermetically sealed in situ. For the purpose of this work a new set of glass blower's instruments has been devised, including cutting tools, blowers and hand torches, and experts perform the necessary operations with surprising rapidity.

McLean, Holt & Co., St. John, will erect a stove foundry to cost about $10,000.



RAMSAY'S ALUMINUM PAINT

The beautiful silvery Paint—better and cheaper than silver—must be made right for right effects. Splendid for store fronts, stove-pipes, radiators, decoration work and a hundred wants. Mixed ready for use, in handsome tins from ¼ pint up.

Ramsay's Aluminum is right Aluminum.

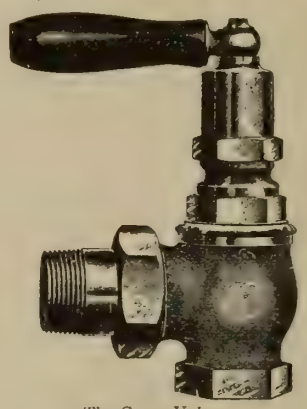
Kerr's Standard and Jenkin Disc Radiator Valves

are perfectly constructed, and of beautiful design. Like all "Kerr" specialties, strictly high-grade.

The KERR ENGINE CO., Limited

Manufacturers



WALKERVILLE, ONT., CANADA

NEW RADIATOR VALVE.

USERS of radiator valves will welcome the Crane self-packing, quick-opening steam radiator valve illustrated on this page. The self-packing feature precludes possibility of these valves leaking at the stuffing boxes, thus saving from ruin expensive carpets and rugs, and the spotting of fine oiled, hardwood floors, and the general annoyance caused by leaky stuffing boxes. By a special device placed in the stuffing boxes of these valves the packing is automatically kept tight and will last for years without renewal. The device is simple, consisting only of a vulcanized washer, located in the top of stuffing box and kept in position by spring compression, which fully compensates for the wear on washer.

These valves open and close by turning the lever handle one-half turn. To open, turn to the left; to close, turn to the right.

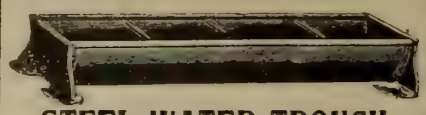
The quick opening and closing feature will no doubt be appreciated by users

The Crane Valve.

who have operated old style radiator valves. The lever handle can be operated by the foot as well as by the hand.

The construction of these valves is such that when closed the discs bear on the seats very tightly, and the valve is locked in place until released. The bonnets are interchangeable with the bonnets of Crane regular radiator valves. The user may at any time equip his old valves with these new and important improvements.

These valves have artistically designed proportions and add much to the appearance of a nicely furnished apartment, by their symmetrical proportions and general rich appearance.



The lever handles are made from cherry wood, painted a deep rich black color which contrasts with the nickle plated trimmings of the valves. Prices and further information will be furnished by the manufacturers, Crane Co., Chicago.

McLachlin Bros. are negotiating for a contract to operate the water works machinery at Arnprior, by electric power. They have in view the erection of a large dam on the Madawaska River.

* * *

The Town Council of North Toronto have appointed a committee to secure information as to the cost of installing an incandescent electric light plant. The intention is to submit a by-law to the ratepayers in January.

BUSINESS SUCCESS

simply means satisfied customers. One dissatisfied customer spells slower business. A few means commercial disaster.

THE OXFORD HEATING SYSTEM

is the most perfect, economic and durable. Progressive dealers like our products because they yield a big margin of profit and please customers so well that they bring other customers right along all the time.

THE OXFORD HOT WATER BOILER

is so immensely superior to all others that it needs only to be explained to effect a sale.

It is scientifically and economically perfect. The upper walls of the fire-pot are sloped inward—overhanging the fire. The heat direct from the fire sharply impinges against the overhanging surfaces—does not pass by them as is the case with vertical walls. The double-sized first water section with bell-shaped flues add further to the heating capacity, which is greater by far than that of any other boiler made, according to amount of fuel consumed.

In our method of construction we completely obviate the use of gaskets or washers by making all connections with **Our Oxford Steel Push Nipple.**

The Oxford Hot Water Boiler has many apparent points of superiority, but the big fundamental one is that it gives your customers the utmost satisfaction and increases your volume of business.

Oxford Steam and Hot Water Radiators

never leak because every joint is a metal to metal one made by the Oxford Steel Push Nipples, doing away entirely with gaskets and washers. With the Oxford Boiler, they make the most satisfactory Heating System and one you can recommend without fear of future complaint.

Send for the Gurney Oxford Book of Steam and Hot Water Heating Apparatus.

WE also manufacture cast iron and steel plate ranges, gas stoves, ranges and heaters, hotel ranges, warm air furnaces and all kinds of cooking and heating apparatus, plumbers' supplies.

BUILDING AND CONSTRUCTION

BUILDING NOTES.

A new railway station is to be erected at Charlottetown, P.E.I.

Mrs. Dr. Johnson is to erect a double house, to cost $4,500, at Sarnia.

W. H. Fogwell is constructing a $2,000 brick residence in Hamilton.

Thomas Graham is erecting a new hotel building at Riversdale, Sask.

The Imperial Bank is to erect a branch building at St. Catharines.

The Bank of Montreal are to erect a branch building at Lunenburg, N.S.

David Gibb, Vancouver, has purchased a site and will erect a $30,000 hotel.

The Bank of Commerce are to erect a new branch building at Woodstock, Ont.

Thomas Allan, Hamilton, has secured a permit to erect nine houses, to cost $14,600.

Baeubier & Smythe, of Brandon, are erecting the New Empire Hotel at Saskatoon.

A. B. Jackson, St. Catharines, has purchased a site and proposes to erect two stores.

It is understood that a new theatre is to be erected in Toronto during the coming year.

It is announced that a new theatre building will be constructed in Brantford shortly.

The Norton Mfg. Co., Hamilton, are to erect a $10,000 brick addition to their factory.

The Fairchild Co. have purchased a site for a large warehouse, to be erected at Regina.

Contracts have been let for the construction of a new general hospital at Niagara Falls.

The First Baptist congregation, Vancouver, are preparing plans for a new $35,000 church.

The Church of England will erect two churches in the Hopewell Hill parish, N. B., shortly.

Construction work has commenced on the new $600,000 factory of the Plymouth Cordage Co., Welland.

Smith Bros. & Wilson, Lethbridge, have been awarded the contract for the new C.P.R. depot at that place.

The Dominion Government are to erect a modern emigration and detention hospital at Quebec, to cost $60,000.

The Ontario Portland Cement Co., of Brantford, are making very large shipments of cement from their works near Paris.

The construction work has commenced on the factory to be erected by the Manning Wood Fibre Co., at Owen Sound.

The Emanuel Congregational Church trustees, Montreal, have purchased a site and will erect a $100,000 structure next Spring.

The new factory of the H. K. Wampole Co., Perth, Ont., is nearing completion, and will be ready for occupancy about February 1st.

The Dominion Government has purchased a site for a new examining warehouse for the Customs Department in Winnipeg. The land was owned by Mackenzie and Mann, and they received $88,125 for it. The building will be erected next Summer.

The Roebling Construction Co., of New York and Buffalo, contractors for the fireproofing of the McGill Union building, Montreal, have placed their order for lathing, furring, etc., to be used in that edifice, with the Pedlar People of the same city.

C. J. Hurt recently disposed of the Carberry, Manitoba, flour mills, to an American syndicate represented by Bruce Howard, of Minneapolis. The purchasers, it is said, intend to establish a string of mills throughout the west and manufacture for the export trade.

F. F. Powell & Co., Montreal, have received a contract from R. E. T. Pringle & Co., of the same city, for roofing the buildings of the Simplex Railway Appliance Co., at Bluebonnets. The same firm are also supplying upwards of four hundred sheet copper doors for the Grosvener Flats, Guy street, Montreal.

Building operations in Montreal during October show that 131 permits for new buildings were issued at a cost of $559 049. Permits for alterations numbered 29, and the amount involved was $80,374. This made a total amount invested in building operations last month of $675,423. The increase over the corresponding month of last year was $399,393.

For the fortnight ending October 31 92 building permits were issued in Toronto, the cost being $525,000. In the list there are about 150 dwelling houses, a postoffice at Yonge and Charles street costing $90,000; a factory on Jarvis street, to cost $15,000; a bank on Queen street east and Grant street, costing $25,000; a dwelling house on St. George street for Mrs. George Gooderham, to cost $20,000.

In the matter of the rapid steel construction, the United States still is in the lead, as demonstrated in a fifteen storey building in William street, New York. In twenty-five days the great steel skeleton was ready for the stone facings, and in six weeks later the building, complete, was filled with tenants. In this building are express elevators which are run 1,500 feet in a minute, or at the rate of a mile in a little more than three minutes.

The use of concrete in building construction is growing so rapidly that bricklayers are taking alarm lest they lose their commanding position in the building trades. Several influences are co-operating to accelerate the growth of the use of concrete. On the one hand are the high cost of wood, brick, stone, and the skilled labor required to put these materials in place, while, on the other hand, are the cheapening of cement and increased familiarity with its adaptability in building construction. Some authorities go so far as to say that as concrete grows more familiar to architects and contractors the wooden house will disappear even from the countryside, wood being displaced by a material more durable, readily capable of artistic treatment, and much safer against fire from exterior causes.

Building done in London this season will amount to $400,000 or $500,00, but owing to the inefficient system of granting permits only 156 documents were issued from the engineer's office since January 1, and these totalled only $322,000. D. H. Howden & Co. are erecting a warehouse on York street that will cost $50,000; then there is the new Bank of Commerce building, $35,000 or $40,000; the Dennis Wire & Iron Works building, costing $20,000; Geo. Belton's planing mill, $15,000; new stores building, Carling's Heights, $30,000; St. Andrew's Sunday school, $18,000, and Adelaide street church enlargement, $16,000. Chalmer's Church congregation contemplated a $12,000 or $15,000 edifice, and the new street railway offices in the east end will cost about $5,000. Added to these structures are a number of residences and other buildings that will easily bring the total outlay up to $500,000.

Canadian make discount 40 per cent.

THIS IS A SEASONABLE ARTICLE

A★1

We are this week illustrating a splendid selling Christmas line. But the cut gives you no idea of its quality. The steel that goes into these scissors is tempered by a special process known only to the manufacturers of **FISH HOOKS**. Every stage in the making which turns the rough steel into the finished article is supervised by skilful mechanics. We absolutely guarantee **FISH HOOKS** to be without a peer on the market, at the price we can quote you. Write us at once. The time is short.

RETURNED NOV 11 1905

F. W. LAMPLOUGH & CO., Montreal

WALKER CORK SCREWS

are good holiday souvenirs and live sellers the whole year. Are made well and are made out of good material. That is why we guarantee every one that we put out. When ordering Cork Screws try **Walkers**.

Manufactured only by **ERIE SPECIALTY COMPANY,** ERIE, Pa. U.S.A.

Books for Plumbers, Steam Fitters, Etc.

Furnace Heating

By W. C. Snow.

The author has prepared a book of reference for the furnace man or the architect. There are tables which have been tested by years of practical use. They are of great value to the practical furnace man.

170 pages, 6 x 9 in.; 90 illustrations; cloth bound.

Price, post paid, - - $1

(This book has had a heavy sale in Canada.)

* * *

Kitchen Boiler Connections.

A selection of practical letters and articles relating to water backs and range boilers.

The work is divided into two parts, the first on water backs and boilers and their connections, and the second on heating rooms from range boilers, a topic that has much practical interest to the plumber. There are few lines of work where so many little difficulties arise, and therefore the discussion of different questions which have arisen should be of great interest as well as practical value to workers in this line.

Fifth enlarged edition; 194 pages; 6 x 9¼ inches; 113 illustrations.

Cloth, post paid, - - $1

* * *

Formulas and Tables for Heating.

Being German formulas and tables for heating and ventilating work, for those who plan or erect heating apparatus. By J. H. Kinealy, M.E.; 56 pages; 4½ x 7 inches; leather.

Price, post paid, - - $1

* * *

American Sanitary Plumbing

By J. J. Lawler.

For plumbers, steam fitters, architects, builders, apprentices, etc. Containing practical information of all the principles involved in the mechanics and science of modern plumbing, illustrating with original sketches the fundamental principles of everything the plumber should know. Everything explained in the most simple language, so that it will be impossible to misunderstand anything.

Large 12mo, cloth, post paid, - $2

Steam and Hot Water Fitters' Text Book.

A book prepared for the Steam and Hot Water Heating Course at the New York Trade School, with supplementary chapters on house heating, specifications and surface estimating; by Thos. E. McNeill.

This book will be appreciated by those who wish to master the principles of steam and hot water heating. The definitions in the beginning deal with the appliances, and little by little the reader is led on until at the close he is informed how to figure surfaces, lay out plans and install heating apparatus with the necessary piping.

140 pages; numerous illustrations and diagrams; 5 x 7 inches.

Cloth, post paid, - - $1

A SQUARE DEAL
FOR
Square Dealers

Square dealers, we take it, are those who try to give their customers goods that are "square" —honest all through. For forty years we have been giving all dealers the "square deal."

We make all the "ENTERPRISE" hardware specialties just as good as we know how—then we go out and tell the public of all the world about their merits. Square Dealers ***distribute*** them—they are already ***sold.*** Just ahead is the big demand for

"ENTERPRISE"

Meat and Food Choppers and "ENTERPRISE" Sausage Stuffers, Lard and Fruit Presses. They are being widely advertised now to the public. Write for our literature about them, including our new catalogue of all the "ENTERPRISE" specialties. Get ready for the biggest season you have ever seen on "ENTERPRISE" goods. We are ready. Get your share.

Increase your sale of "Enterprise" Meat and Food Choppers by using our new Booklet: "The Cook, Her Critic and—." We will send you a supply of these on request.

Your Trade

REQUIRES THE VERY BEST

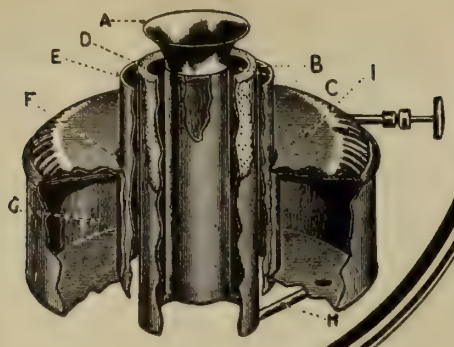
Our Best is not the Vaunted Best of Every Newcomer

IT IS THE EARNED RECORD OF MANY YEARS

THAT is a fair argument. Think it over. Why do the thousands of customers come back again and again for our rope and cordage?

The consumer is not going to try anything new when the brand he has always bought is better than it ever was. After all commerce is made up of satisfaction. There are two cardinal points about our business:

1st —The high standard of quality in cordage has won the trade to us.



2nd —**The maintenance of the Quality in the Goods** has held and increased our trade and it is only reasonable to believe that there will be a steady continuation.

Consumers Cordage Co., Limited

is what best describes

THE WIZARD ADJUSTABLE HINGE HANGER

When an ordinary hanger is used did you ever notice how time is often lost trying to get the sliding-door to hang properly ?

With ***The Wizard*** not one moment is wasted. You simply turn the hexagon nut or set-screw and then the door can be placed in the position desired.

No other hinge hanger works so quickly and so satisfactorily as ***The Wizard.***

Do you want to sell the best hanger ? Ask your jobber about ***The Wizard*** when he calls.

BRADSTREET'S

Capital and Surplus, $1,500,000. Offices Throughout the Civilized World.
Executive Offices: Nos. 346 and 348 Broadway, New York City, U.S.A.

THE BRADSTREET COMPANY gathers information that reflects the financial condition and the controlling circumstances of every seeker o mercantile credit. Its business may be defined as of the merchants, by the merchants, for the merchants. In procuring, verifying and promulgating information no effort is spared, and no reasonable expense considered too great, that the results may justify its claim as an authority on all matters affecting commercial affairs and mercantile credit. Its offices and connections have been steadily extended, and it furnishes information concerning mercantile persons throughout the civilized world.

Subscriptions are based on the service furnished, and are available only by reputable wholesale, jobbing and manufacturing concerns, and by responsible and worthy financial, fiduciary and business corporations. Specific terms may be obtained by addressing the Company at any of its offices. Correspondence Invited.

BOOKS FOR BUSINESS MEN

Business Short Cuts

The largest, the best, the most practical book of experts' short cuts ever published.

Contains much valuable information on :

Labor Saving Methods, Advertising, Loose-Leaf Ledger Devices, Checking Systems, Mathematical Short Cuts, Correspondence Helps, Card Systems, etc.
$1.00 Post Paid

Manufacturing Cost

By H. L. C. Hall

This book is a new departure in the way of a book on "cost accounting." In it you will find treated the principles of the science instead of a description of what some one else has done. Other people's systems do not interest you unless you can apply them to your own uses, hence only those which can be applied to your own needs are touched upon.

The Buyer, The Manager, The Superintendent, The Book-keeper, The Secretary, The Sales Agent and all those interested in knowing "what it costs" should secure a copy. Send for circular

Price, $3.00 Post Paid

Thorne's Twentieth Century Book-keeping and Business Practice

By W. W. Thorne

Mr. W. W. Thorne is the acknowledged leading authority on Book-keeping in the United States and Canada. The Ontario Government recently engaged Mr. Thorne to re-model the book-keeping system of the Province.

The Index

of this book contains over nine hundred references and is so arranged that any subject can be referred to instantly.

Some Subjects Treated

Accounts Receivable	Accounts Payable
Adjustments	Assets
Averaging Accounts	Bad Debts
Balance Sheet	Bond Accounts
Bank Accounting	Capital
Capital Stock	Card Ledgers
Cash Books	Cash Discounts
Checking Systems	Cost Accounts
Cross Entry	Distribution of Accounts
Depreciation	Double Entry
Expense	Installments
Interest	Journals
Ledgers	Merchandise Accounts
Etc.,	Etc.

If you are a book-keeper you cannot do without it.

If you are a business man it will be worth money to you.

WHOLESALERS AND MANUFACTURERS

Annual Conventions of American Associations at Washington, Nov. 8, 9 and 10

THE convention of the National Hardware Association of the United States and the American Hardware Manufacturers' Association does not directly affect either the Canadian hardware trade or Canadian manufacturers, and yet in an indirect way it is of great interest, for the difficulties which these associations have to encounter are much the same as those which the Canadian trade will have to fight as Canada develops and competition becomes keener.

The four subjects to be given special prominence this year were "Catalogue Houses," "Private Brands," "Parcels Post" and "Railroad Freight Rate Legislation."

Catalogue Houses.

The first of these, "Catalogue Houses," has been discussed in Hardware and Metal several times. As yet this is not a live issue in Canada. The catalogue houses of the United States have tried hard to do business in Canada but the delay caused by getting the goods passed through the Customs Department has prevented them from getting a foothold. It was shown by reproductions from the catalogues of Sears, Roebuck & Co., and Montgomery, Ward & Co., of Chicago, that these houses sold in many cases to the consumer as cheaply as the retailer could buy, and in some cases their price was even lower than the jobber's price. The policy of wholesalers has been not to buy from any manufacturer who allows his goods to be slaughtered by catalogue houses. The result has been that each year a number of the largest manufacturing firms have announced to the jobbers that they would no longer sell to catalogue houses.

Private Brands.

But while the manufacturers expressed themselves as willing to co-operate as far as possible with the jobbers in their fight against the catalogue houses, they asked the jobbers that they sell the manufacturers' regular brands and not their own private brands. This seems to be a fair request. If the jobber objects to the manufacturer selling direct to the retail trade and thus entering into competition with him, surely the manufacturer has a right to object to the wholesaler coming into his field in offering the trade goods under a private brand and thus decreasing the sale of goods with the manufacturer's regular brand.

Parcels Post.

The opposition to the establishment of a parcels post was another blow at the catalogue house. In the address of the president, S. A. Bigelow, of Boston, and also the report of the secretary-treasurer, T. J. Fernley, of Philadelphia, there was declared the necessity of defeating all parcels post measures, this being regarded as necessary to the prosperity of hardware business as with a parcels post the big mail order houses would soon drive many jobbers out of the field.

One-Cent Letter Rate.

One-cent postage accompanied by typewritten letters was advocated. In fact the convention declared itself in favor of a general reduction of letter postal rates from two cents to one cent as soon as the Post Office Department can see its way clear without imposing too heavy an additional burden on the revenue. One of the members in speaking on this matter said:

William Vallance, of Wood, Vallance & Co., Hamilton, President Canadian Wholesale Hardware Association.

"We want a one-cent letter rate independent of any changes in magazine and periodical rates. We do not want the two things confounded. At the same time the association will not press for the reduction in the face of a big deficit. We are willing to leave that to the discretion of the Postmaster-Geoeral."

Railway Rate Legislation.

The one question which threatened to mar the harmony with which the business of the association was transacted was the matter of railway rate legislation. All were agreed that the rebate system was wrong, whether it was a rebate for private cars, private tracks or any other reason. It was easy enough to see the wrong; the difficulty was to provide a remedy.

Two resolutions were introduced looking towards establishing the attitude of the organization in regard to the position of President Roosevelt upon this matter.

E. B. Pike, of Pike, N.H., a member of the executive committee and also of the freight committee of the body, offered a resolution which if adopted will be a complete indorsement of President Roosevelt's proposition to increase the powers of the Interstate Commerce Commission. N. A. Gladding, also a member of the freight committee, offered as a substitute a resolution expressing confidence in President Roosevelt but failing to indorse the President's proposition.

Many of the delegates thought railroad freight legislation as advocated by President Roosevelt far too big a question and too important for hardware jobbers, manufacturers or any other

body of men to wrangle with and attempt to decide after only one or two days' consideration.

Mr. Pike's resolution indorsing President Roosevelt's proposition was finally carried and a copy of the resolution was ordered to be sent to the President.

Classification of Fixed Ammunition.

Another question of importance which the Hardware Association discussed was the classification by the railroads of fixed ammunition such as rifle and shot gun shells as "high explosives." The association objected strongly to this as it increases the cost of transportation and subjects the members handling ammunition to restrictions which they declare are not warranted by facts. Mr. Bigelow, the president of the association, said he had practical demonstration in a fire that occurred at his place that burning ammunition was not dangerous unless very closely confined.

The present railroad classification of ammunition with dynamite and nitroglycerine affects the insurance and storage problem with many dealers. In some cities the authorities insist on special fireproof vaults being constructed for the storage of powder and cartridges, and this the association declared both unnecessary and unfair.

Canadian Delegation.

The Canadian association was well represented. In fact, it is doubtful if there has been as large and as representative a delegation present from Canada as registered at the New Willard at Washington this year. A glance over the names will bear out this statement :

William Vallance, of Wood, Vallance & Co., Hamilton, president of the Canadian Wholesale Hardware Association.

T. H. Newman, of Caverhill, Learmont & Co., Montreal, vice-president Canadian association.

James Hardy, Toronto, secretary Canadian association.

A. J. Hardy, of Jenkins & Hardy, Toronto.

T. B. Lee, of Rice Lewis & Son, Toronto.

Thomas Dexter, of H. S. Howland & Sons, Toronto.

William Starke, of Starke Hardware Co., Montreal.

T. H. Newman, Caverhill, Learmont & Co., Montreal, Vice-President Canadian Wholesale Hardware Association.

Cyrus Birge, of Canada Screw Co., Hamilton.

H. T. Hunter, Hardware and Metal.

Messrs. Vallance and Newman addressed the Hardware Association.

President Bigelow introduced Mr. William Vallance, president of the Canadian Wholesale Hardware Association, who spoke as follows :

"Mr. President and Gentlemen : It affords me a great deal of pleasure on behalf of the Canadian association to thank you for the very kind invitation extended to our members to visit you. We need counsel, have much to learn, and we know of no gathering in the world where we could learn so much as from the gathering that I see before me this morning, composed as it is of the most influential members of the trade in the United States.

"We occupy on the map not a very large space ; we are scattered ; we have

James Hardy, of Jenkins & Hardy, Toronto, Secretary-Treasurer of Canadian Wholesale Hardware Association.

not the solidity that your association has. The coast has a small association of its own. Winnipeg has one for Manitoba, and the Eastern Provinces have one for the Maritime Provinces, and our association is composed of representatives from Quebec and Ontario. We have not attained to a universal association such as you have, but we hope to progress to it, but owing to our long drawn out settlements this has not yet been attained. We come here to learn. We cannot teach you anything. We are glad of the opportunity you have afforded us. I thank you, gentlemen."

President Bigelow then introduced Mr.

Cyrus Birge, Canada Screw Co., Hamilton, ex-President Canadian Manufacturers' Association.

T. H. Newman, vice-president of the Canadian association, who said :

"Mr. Chairman and Gentlemen of the National Hardware Association : I de-

sire to confirm as strongly as I can the thanks so ably expressed by our president for the many courtesies tendered our association. We have been in existence about seven or eight years. Mr. Fernley, your able secretary-treasurer, has paid us two visits. I would like to make a statement, I don't know whether it is proper or not, but we will come no more unless some of the national association pay our association a visit. We would like to see you at our next annual meeting in October, in 1906, possibly to be held either in Toronto or Hamilton, Ontario.

"I would like to say just one or two words regarding the cordial, friendly relationship between the United States and Canada, not only in a friendly way but from a business point of view. We in Canada do as much trading with the United States—considerably larger—than we do with Breat Britain. We are so closely allied to you, the boundary line is so narrow and almost unintelligible, that our natural desires and inclinations are towards American goods, and these have become familiarized to us to a very large extent, and our factories are modeled very much on the same plans that they are in the United States and are developing rapidly.

"We in Canada seem to have turned the corner. We have a population of about six millions, progressing rapidly, with an unbounded territory and unlimited resources, and we look forward to a great future, and I think I am safe in predicting that in the next ten or fifteen years Canada will see a development undreamed of ten years ago.

"I don't think I can add anything to what Mr. Vallance has said, and you will be welcome in Canada if you come there and we will do our best to entertain you and hope to see you next October."

The question of reciprocity and trade relations was let severely alone, much to the disappointment of many of the delegates, the majority of whom are anxious to see closer trade relations existing between Canada and the United States, although it must be said their views are mostly selfish. They want reciprocity merely because they would then have a larger market.

Social Side.

With about three hundred fine-looking wives, pretty daughters, and blushing sweethearts present the social side is one of no small importance. In addressing the delegation at the White House Thursday afternoon President Roosevelt said he had always had a great deal of respect and admiration for the hardware dealer and hardware manufacturer, but now since he had met his wife he believed she was the better man.

Too much praise cannot be given the ladies for the executive ability displayed in their management of the social functions. The morning and afternoon were given over to business meetings, while each evening the ladies provided some most delightful entertainment.

With all its advantages as a convention city Washington presented one disadvantage to the two associations, and that was that the Arlington and New Willard, the headquarters of jobbers and manufacturers respectively, were a considerable distance apart and if each association attended its own meetings there was little opportunity for them to meet each other as frequently as might be desired. The social evenings arranged for by the ladies did a great deal to bridge over this difficulty.

On Thursday evening a progressive euchre party was given in the parlors of the Arlington. Some time ago word was passed to firms represented that they could send prizes for the party. They responded with alacrity and the result was a very unique and in many respects valuable collection of prizes.

There were sets of garden tools, a dozen or more floor sweepers, axes, hatchets, saws and tools of all sorts, a big bathroom scale with measuring rod attachment, sets of carvers, pearl-handled butter spreaders, children's express wagons, and in fact almost every household utensil that could be found in a hardware store.

On Thursday evening a joint meeting of the two associations was held. Addresses were delivered by Thos. P. Shonts, chairman of the Panama Canal Commission, Gifford Pinchot, chief of the Forestry Bureau, and David Williams, of the Iron Age.

On Friday evening the convention was brought to a close with the annual banquet. The speakers were Hon. Jas. R. Garfield, son of the late president of the United States, Hon. Theo. E. Burton, Hon. Oscar P. Austin and Secretary Shaw of the Treasury.

Attendance Large.

The attendance this year was by far the largest in the history of the associations. Secretary Mitchell stated the attendance was fully a 50 per cent. increase over that of any previous meeting. There were fully one thousand delegates and their ladies in attendance.

Souvenirs.

There were souvenirs of all sorts distributed by the manufacturers. Members

Let Us Push Two Good Paying Specialties for You.

We are pushing *Sherwin-Williams Buggy Paint* and *Sherwin-Williams Enamel Leather Dressing* for the benefit of our agents and dealers. If you are one of them, you know that our methods bring profit and permanent trade—if you are not, write us today for particulars of the way in which we are increasing the demand for these goods in every locality.

S-W. Buggy Paint and S-W. Enamel Leather Dressing are as steady sellers the year around as any paint specialties the dealer can put on his shelves.

S-W. Buggy Paint is an exceedingly tough and durable gloss paint, in handsome, permanent colors. All owners of vehicles have constant occasion to use it in refinishing their buggies and carriages. Its durability makes its use popular on boats, porch and lawn furniture, and other surfaces exposed to the weather.

S-W. Enamel Leather Dressing is unexcelled for refinishing carriage tops, curtains, etc. It keeps them soft and pliable and fitted to withstand the effects of rain and mud.

The honesty and efficiency that your customers find in S-W. Products bring them back for other things you sell. Can you afford to neglect such an important point in your business?

Write today to our nearest office.

and their wives were loaded up with all sorts of patent tape measures, hat pins, granite ware samples, watch charms, and nail clippers, till the rotundas of the hotels looked like a bargain day rush in a department store.

Pike Manufacturing Co.

The Pike Manufacturing Co., of Pike, N.H., distributed a souvenir that was at once a handy article for every man and at the same time an excellent advertisement for their assorted boxes of oil stones and scythe stones. The souvenir consisted of a small oil stone set in a rosewood box. A small booklet describes in detail the size of the assorted boxes of which they are making a specialty, a full list of what each box contains, the retail price and the price to the general public. Readers of Hardware and Metal would do well to write for one of these souvenirs, the Pike Manufacturing Co. having promised to send them free on request.

Dover Manufacturing Co.

The Dover Manufacturing Co., Canal Dover, Ohio, presented to each delegate one of their small asbestos sad irons. This is nickle plated and makes a very neat paper weight. This firm are making a very generous offer in connection with the window display of their irons and the trade should write them for full particulars.

Stanley Rule & Level Co. presented a number of delegates with a very neat folding rule, thirty-six inches in length.

Pittsburg Steel Co. had on hand a number of steel canes prettily decorated with red, white and blue ribbons.

E. C. Atkins Co., of Indianapolis, known to Canadian trade as manufacturers of saws, as usual kept "open house." Every delegate was welcomed to their suite of rooms and presented with a valuable fountain pen.

Smith & Hemenway, of New York, also gave a fountain pen with a gold nib. They also had a small watch charm which was a perfect monkey-wrench in miniature.

Peters Cartridge Co. had a very neat paper weight made out of three of their cartridges.

Winchester Arms Co. gave each of the ladies a miniature brass cartridge hat pin.

The Iver Johnson Arms Co. gave as their memento a very fine leather-bound notebook.

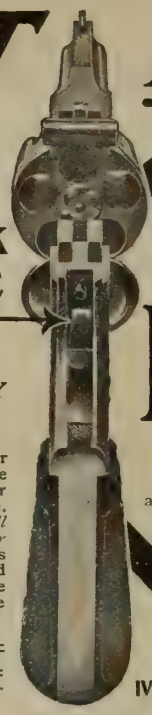
The Oneida Community, Limited, gave a neat little box containing three jars of their jam. Many of the delegates sampled these at the hotel and pronounced them excellent.

The National Enameling Co. distributed a small granite pail to show the fine quality and good appearance of their goods.

The United States Stamping Co. had a miniature cuspidor neatly packed in a small cardboard box.

Hopkins & Allen Arms Co. gave away neat little euchre card counters.

Philadelphia Lawn Mower Co. had on hand for general distribution a rubber date stamp.



Griffin Manufacturing Co., of Erie, Pa., appealed directly to the men and distributed with a lavish hand a very fine brand of cigars.

Lawson & Sessions, of Cleveland, gave away a small nickle plated monkey-wrench.

E. I. Dupont Co., of Wilmington, had a very pretty and valuable souvenir in a watch guard of silk with a fob embossed in metal.

Boss Washing Machine Co. gave away a small emergency case containing court plaster, etc.

IT IS SAFE

LOOK HERE for the SAFETY LEVER

The hammer cannot hit the firing pin or the cartridge. *When you pull the trigger* (only) this lever rises and carries the blow to the firing pin.

New York Office: 99 Chambers St.

As safe in the home as a kitchen table and just as important. You *may* be so fortunate as to never need the services of a revolver to defend your life, property and the lives of those depending on your protection, but you can't tell—no one of the hundreds robbed and murdered every year suspected that he or she would be the next.

IVER JOHNSON REVOLVERS

are made for your protection—*in every way*. The "Iver Johnson" is the original safety revolver, and the only one with a safety mechanism worthy the name.

Hammer **$6.50**; Hammerless, **$7.80**. For sale by all Hardware and Sporting Goods dealers. Learn about them, anyway—it costs you nothing. If you will ask for it, we will gladly send you our bright little booklet, 'Shots,' together with our handsome catalogue.

CATALOGUES, BOOKLETS, ETC.

When sending catalogues for review, manufacturers would confer a favor by pointing out the new articles hat they contain. It would assist the editor in writing the review.

Asbestology.

A NEAT little paper by the name of "Asbestology" has been prepared by the Canadian Asbestos Co., 44-48 Youville Square, Montreal. Besides giving descriptions of the merits of asbestos it gives interesting little sketches of everyday life. Readers of Hardware and Metal will be furnished with a copy on request.

Whelpley Skates.

The Whelpley Skate & Mfg. Co., Limited, St. John, N.B., have their catalogue for 1905-1906 ready for their customers. It is an extensive catalogue containing thirty-two pages and cover, and had an elaborate cover design drawn by the company's advertising manager, Mr. Fred. S. Stewart. This catalogue gives a full description of the different styles of skates manufactured by this company, and will be forwarded to any readers of this paper who mention in a letter to the company that they saw this notice.

Tortoise Heaters.

Jas. Smart. Mfg. Co., Brockville, have issued a neat little booklet of twelve pages and cover, giving description of their "Tortoise" heaters with illustrations. This booklet will be forwarded to any reader of Hardware and Metal who mentions the paper on requesting a copy of the booklet.

Iron Products.

A catalogue comprising some one hundred and ten pages and cover has been issued by F. W. Cotterill, Limited, manufacturers of bolts, nuts, screws, rivets and washers, etc., Darlaston, South Staffordshire, England. This catalogue gives full description of the different styles of goods manufactured by the company with numerous illustrations, which make it a great deal more interesting to the readers. Dealers can procure a copy of this catalogue by writing the company for same and mentioning the fact that this account was seen in Hardware and Metal.

STOVES AND TINWARE

AGAINST TIN PLATE MILLS.

BEFORE the Tariff Commission, which convened at Montreal last week, the manufacturers who use as their raw material tin plate, galvanized and black sheets, were represented by J. B. Campbell, of the Acme Can Works; W. E. Ramsay, of the Pedlar Metal Roofing Co., and A. R. Withall. These gentlemen advocated a continuance of the present tariff, which is 5 per cent., recognizing, however, that the Government must have revenue.

Messrs. Withall and Campbell dwelt largely upon the possibilities of the Government placing a larger duty on tin plate from the fact that an industry for the manufacture of these is at present contemplated at Morrisburg, Ont. They contended that this industry was neither necessary nor advisable, inasmuch as it would be impossible for any one manufacturing plant, under any circumstances, to supply the market, owing to the multiplicity of qualities, gauges, and sizes required. They requested that, in case the duty was increased, the schedule on tin cans be also increased, as otherwise their industries would suffer from an unequal competition with United States manufacturers.

Mr. Ramsay presented the case of his firm, G. W. Reed & Co., F. F. Powell & Co., and other large interests in Montreal, who are probably the largest users of block and galvanized sheets in the country. His argument regarding the possibility of a Canadian concern supplying the Canadian market was the same as that of Mr. Campbell. He added, however, that those he represented were very well satisfied with the tariff as it stands to-day, mentioning the fact that within the past five months there had been installed in Montreal alone three plants to manufacture sheet steel building material. In answer to a question put by the Hon. Mr. Fielding, Mr. Ramsay stated that the amount of money invested is similar plants in 1896 had been from $40,000 to $50,000, while, in 1905, the amount was nearly a million dollars. When asked what effect a reduction of the tariff on their finished product would have, Mr. Ramsay stated that the duty of 25 per cent. already existing was a very nice thing to enjoy, but for the last six years the Canadian manufacturers had vied with one another in the endeavor to improve their product, and to-day they all manufactured a line which would hold its own in any market in the world. But if the American manufacturer, with his many advantages, should choose Canada as his dumping ground, he could flood our market with his surplus output, and consequently drive Canadian manufacturers to the wall.

Alexander Woods, of the James Robertson Co., Limited, appeared before the Commission, asking that a higher duty be placed upon sheet lead, as it was the intention of his company to manufacture here. The present duty is 26 per cent., less the British preference of 16.67 per cent. Sheet lead is manufactured from pig lead, which carried a duty from Britain of 10 per cent. net. He asked that sheet lead be classed with lead pipe and shot, that is, to bear a duty of 33 1-3 per cent., less the British preference. His mill, which expected to do some export business with Mexico, would be ready to start in a very short time.

Mr. Walter Grose, representing the Ontario Lantern & Lamp Co., of Hamilton, stated that his company had a capital of $100,000, employed 110 hands and had a pay roll of $55,000 annually. He understood that a small factory in Toronto was to ask for a duty on brass plates, and as this is the raw material largely used by his firm, he asked that if it be raised an increased duty be placed on his finished product. Mr. Grose stated that, in his opinion, it would be impossible for the brass factory alluded to to take care of the Canadian trade, which, though comparatively small, still demanded an infinite variety of grades and sizes of brass plate. Mr. Grose expressed the opinion that a duty of at least 40 per cent. would be required to put such an industry on a paying basis.

Mr. E. M. Thurber, manager of the Nicholson File Works Co., Port Hope, Ont., said that he believed there was a disposition among steel manufacturers to ask that file steel be put on the dutiable list. Files now have a duty of 30 per cent., and file steel, which is not made in Canada, is free. Mr. Thurber stated that labor in file making amounted to 60 per cent. of the value of the product, but in the United States, owing to their manufacturing quantities, the cost was 25 per cent. less than in Canada. If a duty be placed on file steel, Mr. Thurber suggested that one of from 10 to 50 cents a dozen be placed on files, in addition to 30 per cent. ad valorem.

So far as hardware interests are concerned, this closed the Commission's inquiries in Montreal.

SEASON FOR STOVE REPAIRS.

THIS is the season when people order stove repairs, says a writer in the Metal Worker, and woe to the dealer who does not have some means of keeping track of them. I have tried all sorts of methods and have finally adopted what I have found to be the cheapest thing that answers the purpose and which takes the least attention. Almost any stationery store can furnish a manifold order book, one page to remain in the book and the other page to be torn out for use as an order. By writing the order on the page to be removed with a piece of black carbon paper under it a copy is preserved in the book of the order that is sent. This is not enough. I send with the order tags with my name printed on one side and on the other side the list of repairs, which are to be tied together, and the name of the party for whom they are ordered. This makes several tags on one bundle of repairs, but it is a small matter for the repair dealer to do this work, and I have found none who has objected to doing it for me. Then when the repairs arrive by freight, or otherwise, it is a simple matter to separate the parcels and to know to whom the different parts must go. I then send a post card stating they are ready, and if I am to put them in the stove ask when it will be convenient. I have saved myself a great deal of trouble by exacting a deposit sufficient to pay for one-half the goods ordered. This induces the person who orders them to come back and get them later on and insures me against loss for the carrying charges and against the entire loss if the party never returns. Any stove dealer who will stop and think a little while can plan his own method using these simple provisions to prevent eerors and losses.

SELLING HEATERS.

HOW to get the stove trade away from the retail catalogue houses and away from the other competition is a problem that always confronts the stove man, says the Hardware Trade. It probably always will, or at least for a good many years, for there seems to be no way in which the retail catalogue houses can be put out of business, and other competition is just as permanent.

But perhaps the stove man is not so much bothered with the catalogue houses as some of his neighbors. People do not send for stoves nearly so much as they do for smaller articles. They have a wholesome fear of the freight bill, especially when they are a good distance from the mail order house.

In some sections, it is true, the catalogue house competition is fierce—particularly so on ranges and cooks. But in others the chief competition that the stove man has is his fellow merchant down the street or his neighbor in the next town. These are the people that every merchant must fight—but the fight should always be one of friendly rivalry and nothing unfair should be used in the tactics.

One of the hardwaremen in Minnesota who is noted for the number of heating stoves he sells was asked how he did it.

"I have no fixed plan to pursue year after year," said he. "I vary my campaign with the circumstances. I do a lot of advertising one way and another each year. This is something I never neglect, although different methods are used at different times.

Start Campaign Early.

"I believe in starting the stove campaign early. Some men wait until the middle of September or even later before beginning to work the heater trade. I don't. I begin in August, usually about the middle, although one year I commenced the first of the month. I think that the middle of August is a very good time to begin, on the average. For one thing, by that time you can size up the crop and tell just about how business will be. This is important

for the kind of stove sold varies with the prosperity of the trade.

"For instance, last year the rust struck our district pretty badly and money was not plentiful. As soon as I saw that I decided that the trade on high grade heaters would not be large and economy would be the watchword of the larger part of my trade. So I made my advertising along those lines. I preached the saving of fuel that my stoves would produce. I used cuts of the fire-boxes and explained how they burned less fuel than some other stoves. I also dwelt on the fact that the stoves were solidly built and would last a long time.

"I didn't advertise cheap stoves, but I did not push the highest priced line—the line with the most trimming. Also I went after repair business as hard as I could. I advertised that I could get repairs for any stove on earth and that many an old stove could be made as good as ever with a new fire-box or lining or a new door. This brought in a lot of business, too.

"That's the way I work it. Our crop was never better than it is this year. So I knew that we were in for a good Fall trade and a trade that would not stop at the price of a few more pieces of nickle on the stove. About the middle of August I sent out my first Fall advertising literature. It was a circular letter to all on my heads-of-families mailing list and called attention to the fact that it was but a short time until the heaters would have to be put up and that I would have a full line on display the 26th of the month—Saturday. I said that I had taken on a new line of heaters which were recommended very highly because of certain new features, and I should like to have the recipient call and look at the new stoves—that I would like to show him the new features, whether he needed a stove just now or not.

System in Advertising.

"An advertisement in the two local papers the same week was along the same lines. I used a cut of the new line and gave the prices for the different sizes, with a short description. I emphasized the fact that they would be on display on the 26th. This ad was repeated once and on the 26th I had a full line of the new heaters arranged down the floor, each one shining and spotless. There was no great rush—I did not expect it—but a number of persons dropped in especially to see the stoves, while many regular customers said something about them. By tactful questioning on that day and the following week the clerks and myself gathered the names of 45 people who might be in the market for a heater a little later. Any time anyone stopped to look at the stoves or inquired about them we noted the name if we knew it—if not, we soon found it out. In this way we had a pretty good list to start on and you may be sure I will keep after them until they buy or refuse. I keep up this plan of getting possible customers' names all through the season—in fact, all through the year—and place them on a card index, where a record is kept of the advertising sent them and the ultimate results.

"But to go back to the 45. To each one of them I sent a personal letter saying that I understood they might be in the market for a heating stove a little later and requesting that they call at the store as soon as possible that I might show them my new line. I called attention to the fact that by placing orders early they would have the least delay in getting just the stove wanted and that I would make terms which I was sure would be satisfactory.

"Inside of ten days I had sold two stoves as a direct result of these letters and since then I have sold three more. I expect to sell others, as it is early yet for my trade. As fast as we get names of possible purchasers all through the Fall we send out these letters and augment them with the best newspaper advertising that we know how to write together with circulars and sometimes posters.

Correspondence Helps.

"Then I write to all those to whom I sold stoves a year ago and ask how the heater behaved itself. I say that I want the stove to give satisfaction, and if it is not I should like to know it. The result of this is that I get a nice bunch of written recommendations for my stoves, which I use in various ways in advertising—always with the writers' permission, of course. In case I get a kick—which I do once in a while—I try to straighten matters out. I have gone out into the country fifteen miles to make a stove work right and found that there was a brick or two in the chimney or some other small thing. It pays, though, because when you convince the trade that you mean it when you say you will give satisfaction you have them coming your way in good shape.

"I have a good deal of retail catalogue house competition on stoves, I guess, but I have never made any special efforts towards fighting it. I just do my best and won't worry. I have, though, a low priced line of heaters and of ranges that I show to people that talk catalogue to me. I frequently can convince them that they should buy at home, but not always. I have found often that a confirmed 'catalogue fiend' is about as hard to cure as a cigarette fiend and I do not worry much if I cannot cure all of them. They only can be convinced by actual experience, and it takes a while for the experience to develop in the stove business. That is, the flaws in a stove may not crop out for a year or two, and all during that t me the purchaser thinks he has a bargain.

"In other lines than stoves the catalogue competition is another question and here I generally meet the price and take the loss if loss there is. I believe it pays. You get some good advertising by it if you don't make any actual profit."

SECURING VALVES TO CANS.

W. F. BRODERICK, Vancouver, has secured a United States patent on a new means for securing valves to cans without using solder, which is described as follows: A hollow screw projecting from and communicating with the valve-body, a shoulder or seat surrounding such screw, a hollow connecting-screw designed to engage the screw projecting from the valve-body and provided with an interrupted flange, corresponding radial interruptions in the circumference of the aperture in the vessel with which the valve is designed to communicate, and a check or stop to limit the rotation of the flange of the connecting-screw on the inner side of the vessel whereby the valve may be screwed upon the connecting-screw and the shoulder of said valve drawn tight against the outside of the vessel.

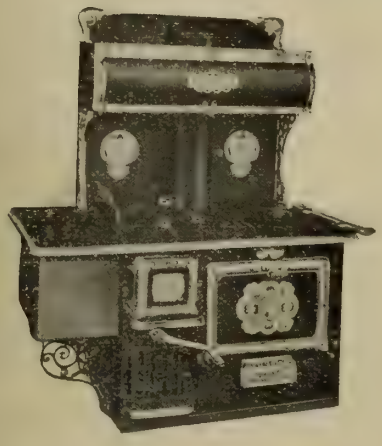
STOVE SUGGESTIONS.

Don't throw away all the catalogues this year without looking at them. In fact, very few of them should be thrown away at all. By preserving them you may be able to make a sale of a stove or to get a part that you otherwise would have to pass on to your competitor.

There are furnaces and furnaces. There are hot air, hot water, steam and combination—hot water and hot air. Each has its good points, and every stove dealer should be prepared to tell how they differ and which kind of a furnace is the best for any particular building.

In starting heating plants for the cold term of the year, it is well to remember that registers should not be opened until the germs and microbes that have gathered during the Summer months are thoroughly roasted. These germs gather in the dark recesses of the furnace until released by the opening of the register, when they mingle in the air of the room and become responsible, in a great measure, for the irritating throat troubles that are so common at this time of the year. Before the registers are opened, the furnace should be lighted and heat generated until the germs and foreign material in the pipes have been brought to a high degree of temperature.

There is no necessity for a dealer mentioning that Winter is at hand and other suchlike remarks that take up space and serve no purpose. The people who want stoves are quite aware of the season and the necessity for action. What they are doing is making up their minds—settling on how much they are prepared to pay.



COAL AND THE TARIFF.

A DESPATCH from London, England, says the Imperial Tariff Committee has issued a number of new documents dealing with the fiscal question. With reference to the coal mining industry it is pointed out that opponents of tariff reform frequently state that as no coal is imported into this country coal miners have no interest in tariff reform; and that even if other industries may suffer, free imports are, at any rate, the best policy for the coal miners. It is argued that "It is scarcely ever true that any one industry suffers without injuring others at the same time; and practically no industry can decay without injuring coal miners. For, though there is actually no coal dumped into this country, manufactured goods in the produce of which coal has been used are constantly being dumped here, and when, in consequence of that, the industry which used to produce those goods in this country ceases to exist there is so much less English coal being used, and less work and less wages for English coal miners. For instance, there are about two tons of coal used to the production of one ton of pig iron, and about three and one-half tons of coal used in the production of one ton of steel."

The Steel Range

That rivets the attention of every woman—appeals strongly to her sense of beauty and impresses her as being easily kept clean—should have considerable space on your floor.

Does it pay you to push an inferior line of ranges, and risk dissatisfying customers, when the margin of profit is as big in selling the

Oxford Chancellor Range

besides the comfortable assurance that there will be perfect satisfaction all round?

The Oxford Chancellor does the hardest part of the selling itself.

The Oven is roomy in all sizes, and easily regulated.

Our Patented Spring Drop-Door makes a convenient shelf for basting.

The Oxford Chancellor is built of the best quality of cold rolled steel sheets with an interlining of Asbestos Millboard throughout.

The Oxford Chancellor is made to burn Hard Coal, Soft Coal or wood. Fire-box fittings are furnished for either as desired.

Our strong and systematic advertising has created an immense demand for the Chancellor. You should be prepared to meet the demand.

Our terms to the trade are liberal. Write NOW for Catalogue 61.

WE also manufacture Cast Iron Ranges, Gas Stoves, Ranges and Heaters, Hotel Ranges, Warm Air Furnaces and all kinds of cooking and heating apparatus, Plumbers' Supplies.

DEPARTMENT STORE DEVELOPMENT.

RECENTLY the T. Eaton Co. increased its capital stock from $500,000 to $1,000,000, the increase being due largely to the policy of expansion now being inaugurated by that concern. The building of a large new store in Winnipeg was a radical step for Eaton to take, judging from the emphatic manner in which he previously declined any and all propositions to "branch out." His idea has always been one of concentration, and it would not be surprising if the responsibility for this western move rests upon other shoulders than his.

A similar experiment was tried by the old firm of Barnes, Hengere & Co. of Buffalo during the western boom in the States. They decided to open a large branch department store in Minneapolis, and managed to lose almost every dollar they invested, notwithstanding an extensive wholesale connection which enabled them to buy to exceptional advantage. The distance between the two stores was too great for really effective management, and we fail to see where Winnipeg and Toronto are very much different. The Eaton Co. have the advantage of a large mail-order trade in the west already established, but with Mr. Eaton himself necessarily out of the calculation a good deal will depend upon the kind of management the western store receives.

Keeping in mind the exorbitant price for their Winnipeg property in the first place, and the rush of other dry goods merchants to pre-empt the western field, we can see where even a large concern may not have the smoothest possible sailing. Mr. Eaton is too far advanced in years to be able to handle the situation himself in any way, and unless the new organization can include a measure of his ability, the pendulum of trade and money success may begin to swing in the other direction.

In strange contradistinction with the Eaton move to Winnipeg is the Simpson move to Montreal. Both illustrate the restless spirit of Toronto enterprise, but while the western store is to be a full-fledged "departmental," the old conservative business of John Murphy's in Montreal is being made even more precise. The situation raises a very fine question as to what kind of an establishment the "coming store" is to be. Looking ahead ten, or even five years, will it be just as easy to keep up the everlasting cry of "bargains," and still figure a profit? In spite of all the boasted enterprise of New York and Chicago stores, we fail to see where they make anything like the money of smaller and more conservative establishments in England. And looking things squarely in the face over here, it may be possible that a reactionary tendency is just about due, if profits are to be considered.

At any rate, the Robert Simpson Co. have surprised everyone by "doing things different," and eliminating everything but ladies' wear in their Montreal store. Thousands of dollars have been spent in fixing up the dress goods, millinery and costume floors while such stocks as men's clothing and furnishings, tinware and housekeeping helps, are entirely dispensed with. So far as we can measure things, the idea seems to be in line with Altman's business in New York, and with the well-known wealth of Montreal to lean on, the chances ought to be good for satisfactory profits. The fact of a big department store organization swinging in favor of exclusive dry goods is an element to reckon with in forecasting the future of retail storekeeping.

EXPLOSIVES AND FIRES.

ONE of the most thrilling experiences in the life of Hardware and Metal's editor occurred some years ago when engaged in mining in the Rocky Mountains. With several others he was engaged in the dangerous task of thawing out dynamite, and one of the party picked up a stick of No. 1 Hercules and held it in his fingers over the flames of a bonfire. The dancing flames from the burning pitch pine caught the waxed paper in which the powder was enclosed and it flared up while the dynamite began to sizzle. Near by was a stream of running water and with great presence of mind the miner, instead of dropping the burning stick, held it in his hands until he had run to the river bank and tossed the explosive into the water. Had the stick been dropped to the ground the concussion would have caused an explosion and the several pounds of dynamite lying near would probably have dug a good-sized grave for the mining party.

That flames have not the same effect upon explosives as concussion is well known, but there are few who will run the risk of carrying burning dynamite in their hands or standing within a few feet of burning ammunition. At the recent convention of the International Association of Fire Engineers at Duluth, however, a committee of ammunition manufacturers to prove their assertion that cartridges and shells may be consumed in roaring flames without danger to bystanders, stood within twenty feet of a roaring fire in the midst of which were sixty-eight thousand rounds of explosives. It was hoped to prove that firemen need not hesitate to go within working distance of a burning building containing cartridges and shells. The exhibitors felt there were no grounds for a contemplated increase in insurance rates on buildings containing ammunition.

A frame building was constructed for the purpose of making the test. In this building were placed sixty-eight thousand rounds of ammunition. These cartridges ranged from 22 calibre to 50-100 high velocity. There were also shot shells loaded with black and smokeless powder and rifle and pistol cartridges of various kinds. The house was made extremely combustible. It was filled with excelsior and fine dry wood and to insure a hot rapid fire, five gallons of gasoline were poured on the mass. The ammunition remained in paste board boxes just as it is displayed in hardware stores. At the end of twenty minutes the fire was put out by firemen.

All of the claims had been proved satisfactorily. Several persons who approached within twenty feet of the fire were struck by flying fragments of cartridges, but in no case was the velocity of pieces sufficient to cause discomfort. The bursting of the cartridges was likened to the popping of corn or chestnuts. It was proved that ammunition in a fire does not explode simultaneously. Each cartridge in a fire explodes individually when its primer is heated to the flashing point, but the flash from one cartridge cannot set off the adjacent cartridge.

TARIFF COMMISSION IN TORONTO.

VARIED were the interests which took advantage of the presence of the Tariff Commission in Toronto to bring before the members of the august body their views regarding the workings of the tariff in relation to the articles in which they were interested. While the keynote of the various sessions in Montreal and other places favored higher duties on most lines, the talk in Toronto was not nearly so unanimous on this score. Dry goods wholesalers opposed increases on woolens and cottons, while users of tin plates, copper sheets, etc., protested against the imposition of a duty on these goods, pointing out that a duty would be an unnecessary burden on manufacturers and consumers, as the market is not large enough to warrant the establishment of mills in Canada. In the face of many divergent views there appeared to be a general desire to maintain the British preferential agreement.

The Commission Welcomed.

President J. D. Allan, of the Board of Trade, opened the proceedings in a brief address. He welcomed the Commission to this growing distributing centre. "The time is opportune for Canadians," he said, "to look about them. We should get out of the narrow parochial views that too often characterize young countries. We are a lusty youth now, and our growth could be very much hastened or retarded by the care and consideration given by you to the representations made."

Hon. Mr. Fielding, in responding, observed that the Commission was, above all things, an open public inquiry, and they desired that any person who had anything to say should come in open meeting and present his views. Sometimes they received private statements, but they preferred that they be presented openly, so that they could be discussed.

Tuesday's session was the most interesting from the standpoint of the hardware merchant, Monday being given over almost entirely to the farmers' delegations, who demanded that if the tariff were changed at all the tendency should be downward.

Tin Plate Duty Opposed.

After dry goods wholesalers, necktie manufacturers and other deputations had been heard, an influential deputation of users of tin plates was introduced by Mr. A. E. Kemp, M.P. Mr. Hugh Malcolmson, Chatham, representing the Canadian Canners, Limited; Mr. R. J. Christie, of the Christie, Brown Co.; Mr. McFarlane, of the E. W. Gillett Co., and Mr. W. G. Francis, of the Francis-Frost Co., all strongly objected to a duty on tin plate, as it would increase the price of their products to the consumers. Mr. Kemp made a strong appeal that no duty be imposed on tin plate, as requested by the promoters of the proposed industry at Morrisburg. A prospectus issued by these promoters, referred to in a recent issue of Hardware and Metal, was produced, the document stating that the Government had promised to aid the industry. Hon. Mr. Fielding, however, stated that the utmost the Government has promised was careful consideration.

"There is not sufficient market in the country to warrant the industry being established here," said Mr. Kemp. "The home of the tin plate industry is in Wales. It is the only country that exports tin plate to any extent. The production there was 400,000 tons last year. The industry of manufacturing steel has not developed to anything like the extent that it had developed when the Americans established the tin plate industry."

Sheet Metal Interests.

Mr. J. O. Thorn, general manager of the Metallic Roofing Co., appeared with letters from manufacturers of sheet metal building materials in Oshawa, Preston, Galt, and Winnipeg, authorizing him to speak on their behalf in various matters. These manufacturers consume at least 90 per cent. of the copper sheets imported into Canada. Mr. Thorn stated that they had reason to believe that representations are likely to be made to have a duty placed upon this material. The manufacturers requested that it remain on the free list as at present, there being no mill in Canada capable of producing the great variety of material consumed here. It is not considered possible for any mill that may be established to manufacture economically, owing to the comparatively small volume and the large investment that would be necessary to provide a suitable plant, also because the impositian of a duty would so enhance the cost of this raw material as to check the consumption of many articles at present made from it.

Mr. Thorn also voiced the opinions of the other manufacturers in opposing the proposed duty on tin plates. His statement to the Commissioners on this subject follows: "We do not consider that the time has arrived when tin plates can be manufactured to advantage in this country, without at least seriously injuring a very considerable number of existing industries that use this as a raw material, and particularly without the imposition of a very high duty. In this connection we may point out that the importations of tin plates into Canada for the year ending June 30th, 1905, were 30,000 gross tons, valued at $1,751,507, while at the time the McKinley Tariff came into effect in the United States, making the duty 2 1-5c. per lb., or equal to an ad valorem duty of about 80 per cent. on the present foreign valuation, there were no tin plates made in the United States, although the population there at that time was upwards of sixty-two millions and the importations of tin plates were valued at upwards of $25,000,000. In fact, it is calculated that in 1883 the duty on tin plates entering the United States was about 30 per cent. ad valorem, but no one ventured to manufacture plates until the duty was increased to about 80 per cent., and it should be borne in mind that we use in Canada nearly every known grade, gauge and size of tin plates that are being produced either in the British or United States mills, and if a sufficiently high duty were imposed, so as to enable the manufacture of tin plates to be carried on in this country, with its population of, say, between six and seven millions, it is quite evident that the cost of innumerable articles would be very greatly increased to the consumers, in addition to many existing industries being seriously crippled."

Plate Glass and Cordage.

Manufacturers of mirror plate, represented by Messrs. W. C. Phillips, J. R. Shaw, E. Hill and Chas. Gray, asked for the admission free of duty of plate glass not bevelled, in sheets or panes not exceeding seven square feet, on which the duty is now 10 per cent., and that bevelled, polished, engraved or painted should be dutiable at 10 per cent., instead of 35 per cent. It was stated that 258 hands were employed in the industry and $150,000 paid in wages annually. Opposition came from Mr. George Kerr, representing Pilkington Bros., the large English manufacturers.

Seven manufacturers of twine and cordage, whose spokesman was Mr. W. P. Stewart of Hamilton, asked that the duty on cordage of all kinds larger than § of an inch in diameter be increased.

Mr. W. B. Sheldon, of Sheldon & Sheldon, Galt, briefly preferred a request for more protection for fans and blowers.

Higher Duty on Stoves.

"The stove manufacturers of Canada have not had much to complain about in the tariff in the last four or five years," said Mr. T. L. Moffat of the Moffat Stove Company, Weston, in opening his case, "but the American

manufacturers are spreading out, and Canada has practically an open door with 25 per cent. tariff." The United States tariff, he said, is 45 per cent. The imports of stoves into Canada were $127,000 in 1901 and $402,000 in 1905.

"The total gross product of the stove makers in Canada is $4,000,000 to $4,500,000—that is, one-tenth of the total is imported from the United States. Our raw material costs us 15 to 25 per cent. more than theirs; and our freight rates are higher. I think the competition between the forty or fifty factories in Canada will keep the price from being raised." Mr. Moffat said the chief opposition was from cheap stoves. He suggested a duty of one cent a pound additional.

Mr. F. D. Brown, representing the Builders' Exchange, asked that the duty be removed from chilled steel shot used in working stone.

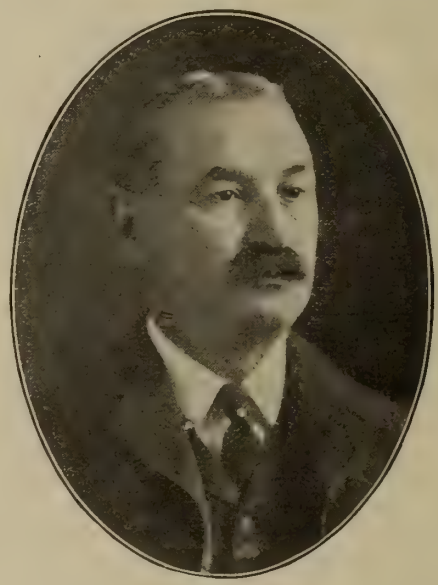
Brushes and Steel Goods.

The brush manufacturers of Canada, represented by Mr. Emil C. Boeckh, president of the United Factories, Limited, asked that instead of 25 per cent. ad valorem, the duty should be 25 cents per dozen on brushes except those fastened in quills. He complained of the flooding of the Canadian market by American goods and prison-made goods from various countries.

Mr. A. F. Hatch, for the Canada Steel Goods Co., asked for a lowering of the duty on steel strips which are used for manufacturing strap hinges, tee hinges and butt hinges, as they are not made in Canada suitable for their needs.

F. W. Barrett, representing the Expanded Metal Company, asked that light steel plates, the raw material from which it manufactured fireproof wire mesh for windows, etc., be placed on the free list.

Higher Duty on Wall Papers.



Mr. T. A. Staunton, Toronto, who headed a delegation of wall paper manufacturers from Toronto and Montreal, complained that they were suffering from importations from the United States under the present tariff of 35 per cent., and suggested a revised scale.

The Commission has decided to sit in London on Monday and Tuesday of next week, and intends to hear at these meetings representatives from the surrounding cities, such as St. Thomas, Woodstock, and Strathroy, and towns within easy reach. The other dates set are Thursday in Chatham, Friday and Saturday, November 24 and 25, in Hamilton, November 27 in Brantford, November 28 in Guelph and Berlin, and Peterboro on the following days.

SUCCESSFUL JOBBERS AND SALESMEN.

No. 6.

MR. JOHN W. THOMPSON, of Frothingham & Workman's sales department, is the subject of this week's jobbers' and salesmen's column. Those who know Mr. Thompson would probably say there are at least two points in his character which mark him in distinction from many other travelers in the hardware trade. These are his quiet, gentlemanly demeanor at all times, and the reliability of his information in regard to hardware. These are characteristics that make a man valuable alike to the house which employs him and the customer with whom he does business. Customers rely largely upon the reports of travelers for information in regard to the condition of markets and prices. And a man whose observation is keen and correct, and whose reports are reliable, becomes a firm friend of his customers and a reliable guide in many things.

Mr. John W. Thompson,
Representing Frothingham & Workman, Limited, Montreal, in New Ontario and the Ottawa Valley.

Mr. Thompson has been with his present firm for nearly twelve years. His route covers the Ottawa Valley and New Ontario as far west as Sault Ste. Marie. On this ground he has done good work for his firm and is welcomed on his rounds by a large clientele.

Previous to his engagement with Frothingham & Workman, Limited, Mr. Thompson represented the old firm of Beury, Macpherson & Co., in Quebec City and the Eastern Townships, where he had a large trade. His first experience in traveling was with this firm. Twenty years ago the selling of goods was made difficult for men of the grip from all parts of the country by the imposition of local commercial travelers' taxes. Quebec City demanded $60 for a license, Three Rivers $20, and other towns and cities various smaller or larger amounts. These taxes have since been repealed and the Quebec Provincial Legislature has since imposed a tax of $300, which, however, does not apply to travelers representing domestic houses.

Mr. Thompson is a resident of the city of Ottawa, but is, however, a life member of the Montreal Amateur Athletic Association. His relations with other travelers are of the pleasantest nature, and many of the younger men remember him gratefully for the advice and assistance he has given them.

RAILWAYS TO BE ELECTRIC.

AS regards the future of electricity in Canada in connection with railroads a die has been cast in its favor by the recommendation of Mr. Cecil B. Smith, chairman of the Temiskaming and Northern Ontario Railway Commission, to equip the first section of the Temiskaming Railway, 100 miles, from North Bay to New Liskeard electrically. Mr. Smith has just returned from Europe, where he made a deep study of the question and only after due consideration was this recommendation made. This is the first instance of electricity being adopted for trunk lines in Canada. It is but a beginning. What the future holds out is almost beyond conjecture, but it is an assured fact that the next generation will see hundreds and even thousands of miles of Canada's trunk lines operated by electricity.

OF INTEREST TO HARDWAREMEN.

Do not be afraid to be known as a careful buyer and one who plays safe on quantities. Let the other fellow have the reputation for giving big orders. You will have a bank account after awhile when he is trying to figure his way from under a load of interest on past due bills.

There is widespread interest in a report that a $5,000,000 company for the manufacture of railway rolling stock will shortly command the labor of 2,000 hands in Toronto, but there does not seem to be any one who knows much about the plan, although the necessity for some sort of concern to provide the railways with cars is fully realized. Canada needs more grain and freight cars, and the big works at Montreal, Farnham, Que.; Amherst, N.S., and Cobourg, Ont., do not seem to be able to supply the demand. In addition to this there is the big demand from the new railways.

PERSONAL MENTION

Quebec.

The Consumers Cordage Company, Limited, Montreal, issued new price lists on the 9th of November.

Mr. Breault, hardware merchant, of South Roxton, paid a flying visit to the metropolis this week.

W. C. Springer, of the Belleville Hardware Co., Belleville, Ont., called on the Montreal trade this week.

Mr. Haskill, Jr., of the Haskill Lumturer of edge tools, Galt, Ont., was in Montreal this week.

Mr. Pratt, of St. Vincent de Paul, was among the out-of-town buyers in Montreal this week.

Geo. E. Delorme, tinsmith and plumber, of Sherbrooke, visited the Montreal supply houses this week.

L. I. Matts, general merchant, of Buckingham, was in Montreal this week calling on the local jobbers.

Mr. McFarlane, of McFarlane Bros., general merchants, Campbell's Bay, visited Montreal a few days ago.

G. R. Moods, general merchant, of Arden, Ont., visited some of the Montreal jobbers during the past few days.

W. G. Butler, dealer in hardware and tinware, Perth, Ont., spent one day this week in Montreal on a purchasing trip.

Talbot B. Strong, secretary-treasurer of James Warnock, Limited manufacturer of edged tools, Galt., Ont., was in Montreal on Tuesday of this week.

Matthew Moody, of the Matthew Moody & Sons Company, Limited, manufacturers of agricultural implements, Terrebonne, visited Montreal recently.

Messrs. A. S. Leblanc and S. H. Lewis of the Canada Paint Company's traveling staff, were in Montreal for a few days this week.

McClatchie Bros., hardware merchants, Cowansville, are now established in their new store, which is a fine three-story building with sheet metal front.

Mr. Walter Grose, one of Montreal's leading merchants, is holidaying this week in New York and other Southern American points. He is accompanied by Mrs. Grose.

Chas. Dietrich, representing Shurly & Dietrich, Galt, Ont., and the Maple Leaf Harvest Tool Co., Tillsonburg, Ont., was in Montreal this week taking orders from the wholesale trade.

Mr. Roland Yeates, representing the London Machine Tool Co., paid the Montreal office of Hardware and Metal a pleasant visit the other day. Mr. Yeates' firm is opening a branch in Montreal.

The Pedlar People of Oshawa and Montreal are getting out a new catalogue (No. 12) which promises to be the most expensive and up-to-date yet published by this firm. Readers of Hardware and Metal on request will receive this catalogue which will be ready for mailing about January 1st, 1906.

Frank H. Alfred, formerly chief engineer of the Pere Marquette Railroad, has accepted an important position with the Canadian White Co., the Canadian branch of the great contracting firm of J. G. White & Co., who have headquarters in New York, London and Montreal. Mr. Alfred will have his headquarters in Montreal.

Mr. Edwin Schofield has accepted a position as traveler with Alexander Gibb, the well known manufacturers' agent, of Montreal, who handles quite a variety of lines of hardware and metals. Mr. Schofield is now making the eastern trip as far as Halifax, and as he is not entirely unknown on that ground, there is every reason to believe that he will meet with success in his new position.

Joseph J. Paquette, hardware dealer, 1584 St. Lawrence street. St. Louis de Mile End (Montreal), was killed by an electric shock in his store last Saturday. He was searching for stove pipes to serve a customer by aid of an electric lamp which had a long regulation non-conducting wire attached. He suddenly fell unconscious to the floor, and all efforts to resuscitate him were unavailing. It is thought that the wire attached to the lamp which Paquette was using became charged from a high tension line outside the building, and that the socket of the lamp he was holding was touched by a defective wire.

Mr. W. C. Webster, senior member of W. C. Webster & Son, the well-known Coaticook hardware firm, paid a friendly call to the Montreal offices of Hardware and Metal on Tuesday of this week. Mr. Webster spoke encouragingly of the conditions throughout the country at large and particularly in his section. "Farmers are prosperous and building operations are going on apace. What more could a hardware dealer wish for?" said Mr. Webster. This firm has been established well over thirty years and its success is in no small part due to the untiring efforts of its founder. Mr. Webster spent the week calling upon the trade.

Toronto.

Mr. D. F. Walsh, Orono, was a visitor in Toronto this week.

It has been decided to hold a Canadian National Automobile show in Toronto during the last week of March next.

James McKay, late of Robertson & McKay, hardware merchants, Woodstock, is fitting up a new hardware store in that town.

Mr. W. R. Stavert, Montreal, representing Jenkins Bros., Boston, was a caller at the Toronto office of Hardware and Metal this week.

Mr. W. H. Mickus, hardware merchant. Preston, has completed a large extension to his store and will make further additions next spring.

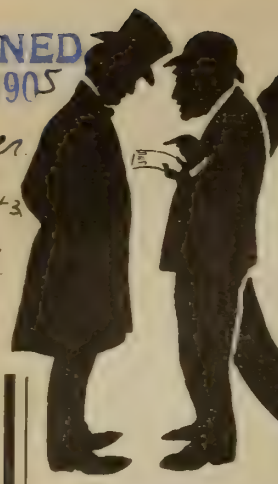
Mr. John Goebel, hardware merchant. Hespeler, died last week. Mr. Goebel was 63 years of age and had resided in Hespeler for nearly half a century.

Mr. B. E. French, of Clysdale & French, successors to R. E. Walker, hardware merchant, Caledonia, was a caller at the Toronto office of Hardware and Metal on Thursday.

Mr. J. A. Brownlee, who recently purchased a stove and tinware business of Wm. Wyatt & Son, London, intends making a feature of the business the advertising of a weekly sale of bargains in the daily papers.

Mr. J. E. Ryan, of Mackie & Ryan, hardware and coal merchants, Pembroke, is spending a two weeks' holiday deer hunting along with members of the Hart Lake Hunt Club on the Upper Ottawa, near Des Joachins, Que.

J. T. Schell, M.P., Alexandria, contractor and millman, has built a most complete and modern residence in Alexandria. The plans were drawn up by Mr. Row, foreman of Mr. Schell's factory, who has been widely complimented on its design and finish.



Mr. W. A. Matthews, of Ross & Matthews, hardware merchants, Cannington, called at the Toronto office of Hardware and Metal a few days ago on his way to his own home at Durham, being called there by the serious illness of his sister. Mr. Matthews called on J. B. MacLean, he having been a former pupil of Mr. McLean's in his school days.

The employes of the Metal Shingle & Siding Co., Preston, have organized a hockey team for the coming season. Officers have been elected as follows: Hon. president, C. Dolph; hon. vice-presidents, S. Moyer, J. King; president, W. J. Wilson; secretary-treasurer, A. Brown; executive committee, E. Schoreau, F. Roos, E. Killer. A team will be entered in the manufacturers' league.

Mr. E. C. McMurtry, at present with W. J. McMurtry, hardware merchant, of Galt, has entered into partnership with W. H. Barnhardt, son of the mayor of Preston, and the new firm to be known as McMurtry & Barnhardt will open a hardware store at Preston as soon as the interior fixtures are installed in the new building which has just been erected for them. The new building has been erected of sand and cement brick and has a frontage of 30 feet with a depth of 65 ft.

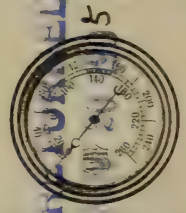
"There is growing friendliness throughout the West Indies towards Canada," says Mr. Harold E. M. Johnson, of Nassau, Bahama Islands, at present on a tour through the Dominion. "Our people have become tired of the selfishness of the United States, which wishes to sell us everything, but will buy nothing in return. The duty put on our fruits is so prohibitive that within the past two years the trade in that line with the United States has almost entirely ceased. There is a feeling that as Canada is a sister colony, it is our duty to buy our goods there, and the time is coming when practically all our goods will be purchased from the Dominion.

RETURNED NOV 20 1905

They're not discussing
"The Troubles on with the Plumbers,"
But the **Merits of J.M.T. Steam and Water Goods**
The kind that lasts—at lowest prices for Reputable Goods.

Valves and Cocks, Injectors and Inspirators, Steam and Vacuum Gauges and Lubricators and Oiling Devices, Steam Whistles, Water Works Supplies.

We carry Iron and Brass Pipe and Pipe Fittings.



J.M.T. Valves made in brass and iron, flanged and screwed ends.

Lubricators, made single and double sight feed.

Reducing Pressure Valves.

We make a full line of Pressure Gauges for all uses; Clocks, Counters, etc.

Safety Valves for stationary, portable and marine boilers.

Hose Racks for fire protection. Various sizes.

The J.M.T. Injector—simple, efficient, fully guaranteed.

THE JAMES MORRISON BRASS MFG. CO., LIMITED 89-97 West Adelaide St. **TORONTO**

Manufacturers of Engineers' and Plumbers' Supplies, Gas and Electric Fixtures.

Tri-Use Cooker

PATENTED

PATENTED

Every dealer should stock a few of these Cookers. They sell wherever introduced.

No well-appointed kitchen is complete without one, and after once using it a woman will not do without it.

Can be used in various ways, viz., as a double boiler for cooking cereals of all kinds, as a steamer for vegetables, puddings, stale buns, bread or cake, or as two separate saucepans, etc.

Advertising matter for general distribution sent free to any dealer.

The McClary Manufacturing Co.

LONDON, TORONTO, MONTREAL, WINNIPEG, VANCOUVER, ST. JOHN, N.B. HAMILTON

"Everything for the Tinshop."

MARKETS AND MARKET NOTES

(For detailed prices see Current Market Quotations, page 79.)

THE WEEK'S MARKETS IN BRIEF.

MONTREAL.

Shot—Discount is 10% instead of 15% as formerly.

White Lead and White Zinc have advanced.

Barb Wire is now quoted $2.72½ f.o.b. Montreal.

Poultry Netting—Two inch mesh 55 and 5%, other meshes 55%.

Summerlee Pig Iron has advanced to $22.

Pig Lead is now quoted from $4.05 to $4.15 per 100 lbs.

Forged Iron, Refined Iron and Horseshoe Iron have advanced 5c. each.

TORONTO.

Iron Pipe—Another advance is predicted.

Solder—Prices have increased ¾c.

White Lead—An advance of 25c. is reported.

Bar Iron—Now quoted at $2, an advance of 5c.

Shot—New discount of 10%, formerly 15%.

Barb Wire—Advanced 5c., f.o.b. Cleveland.

Wire Nails—Some dealers have advanced prices 5c.

LAST MINUTE METAL MARKETS.

Montreal, Nov. 17, 1905.

Pig Lead advanced again on the local market to-day, and is now quoted at $4.10 to $4.20.

Quebec Hardware Markets.

Office of HARDWARE AND METAL,
232 McGill Street,
Montreal, November 17, 1905.

SKATES are selling in really abnormal quantities this season and, what is perhaps the most satisfactory feature of the market, the demand is nearly all for the better goods. The formation of hockey teams all over the Province, taken with the general prosperity in Quebec, has created a desire for the more expensive grades.

General hardware is selling very briskly, the city trade being particularly fine. The most active demand in general hardware lines is for cow ties, which, although this is the fag end of the season, are going out in great volume.

Snow shoes have been selling so rapidly that the supply has not been able to keep up with the great demand. In consequence some grades have been almost sold out already and there is a disposition to ask higher prices for those still in stock.

The important changes of the week include advances in white lead and new discounts on shot, which is now quoted at 10 per cent. instead of 15 per cent. off the list price. Barb wire has been advanced to $2.72 1-2, f.o.b. Montreal, and poultry netting, 2 inch mesh, is now quoted at 55 per cent. and 5 per cent., while other meshes are quoted at 55 per cent.

Business in all lines was more exceptionally brisk up to Wednesday of this week for on that day winter freight rates were ushered in. Somewhat of a lull in business generally follows the rush to get goods while summer freights are in force, but this year a fall of snow coming on Wednesday seemed to quicken the demand for the distinctly winter lines and no noticeable falling off in orders was experienced. The end of the week saw almost as much business as the first few days, with skates, hockey sticks and other sporting goods well to the front.

Axes—Orders just now are very large in anticipation of the approaching lumber cutting season. We quote: Chopping axes, unhandled, $6 to $9.50 a dozen; double bitt axes, $9.50 to $12 a dozen; handled axes, $7.50 to $9.50; Canadian pattern axes, $7.50 a dozen.

Handles—Sales continue to be encouragingly large. We quote: Axe handles, No. 3, $1.25; No. 2, $1.50; No. 1, $1.90 a dozen; adze handles, 34 inch, $2.20 a dozen; pick handles, No. 2, $1.70; No. 3, $1.50 a dozen.

Sewing Machines—Orders are well up to the mark and the season may be said to be fairly on. Our prices are as follows: Hand sewing machines, $11 each, net; complete machines, with stand, $18.00 and up, according to quality.

Lanterns—We are still quoting: Cold blast, $4.50; No. 0 Safety, $5.00.

Rivets and Burrs—As remarked above all general hardware lines are enjoying big sale. Our quotations are as follows: Best iron rivets, section, carriage and wagon box, black rivets, tinned do., copper rivets and tin swede rivets, 60, 10 and 10 per cent.; swede iron burrs are quoted at 60 and 10 and 10 per cent. off new lists: copper rivets with the usual proportion of burrs, 45 per cent. off: and coppered iron rivets and burrs in 5-lb. carton boxes at 60 and 10 and 10 per cent.; copper burrs alone, 30 and 10 per cent., subject to usual charge for half-pound boxes.

Screws—We quote as follows: Round head, bright, 82 1-2 per cent.; flat head, bright, 87 1-2 per cent., brass, round head, 75 per cent.; brass, flat head, 80 per cent.

Bolts and Nuts—Business continues to be satisfactory. Prices still quoted: 3-8 and smaller, 60 to 10; 7-16 and larger 55 to 5.

Horse Nails—As the season for these goods is now at its height orders are coming in in good sizes. We quote: C brand, 40, 10, and 7 1-2 per cent.: M.R.M. Co., 55 per cent.; P. B. brand, 55 per cent.

Wire Nails—The advance noted last week has been held and we are still quoting $2.10 to $2.20 per keg f.o.b. Montreal.

Cut Nails—The demand is normal. We are quoting: $2.20 per keg f.o.b. Montreal.

Horse Shoes—Sales are large at the advanced prices which were noted last week. We still quote as follows: P.B. New Pattern, base price, $3.50 per 100 lbs., M.R.M. Company latest improved pattern iron shoes, light and medium pattern No 2 and larger, $3.65. No. 1 and smaller, $3.90, snow pattern, No. 2 and larger, $3.90, No. 1 and smaller $4.15. Light steel shoes, No. 2 and larger, $4: No. 1 and smaller, $4.25; featherweight, all sizes, No. 0 to 4, $5.60. Toeweight, all sizes, 1 to 4, $6.85. Packing—Up to three sizes in a keg, 10c. per hundred pounds. More than three sizes, 25c.

Sporting Goods—Rifles are still being sold in pretty good quantities, while fair sized sorting orders for ammunition are being received daily. We quote: Canadian made shells, black, 25 and 5 per cent.; smokeless, 25, 10 and 5 per cent.; American centre-fire cartridges, list net; sporting and military, 10 per cent. advance on list; primers, $2.05 per thousand; American loaded shells, 20 per cent. discount; B.B. caps, $2.00 per thousand; standard shot, $6.50 per hundred lbs.; chilled, $7 per hundred lbs.; buck and steel, $7.50 per hundred lbs.; ball, $8 per hundred lbs. We quote discounts 10 per cent. on shot, f.o.b. Montreal, Toronto, Hamilton, London, St. John and Halifax.

Building Paper—The trade, though it continues good, is quite without feature. Prices remain unchanged.

Cement and Fire Brick—Things are very quiet in this business this week and there is little to report. We are still quoting as follows: $1.80 to $1.90; Belgian, $1.60 to $1.90 per barrel; ex-store, American, $2 to $2.10 ex-cars: Canadian Portland, $2 to $2.05. Firebrick, English and Scotch, $17 to $21, American, $30 to $35; White Bros.' Eng. cement, $1.80 in bags; $2.05 in barrels in round lots.

Coil Chain— We quote: 5-16 inch, $4.25; 3-8 inch, $3.75; 7-16 inch, $3.55; 1-2 inch, $3.35; 9-16 inch, $3.30; 5-8 inch, $3.20; 3-4 inch, $3.05; 7-8 inch, $3; 1 inch, $2.95.

Skates—Big orders for the more expensive grades are the feature of the trade. We still quote: From 25c. to $2.50, according to quality.

Sleigh Bells—There has been an incessant demand for all the standard grades. Prices remain as follows: Back straps, 30c. to $2.50; body straps, 70c. to $3.50; York Eye bells, common, 70c. to $1.50, pear shape $1.15 to $2; shaft gongs, 20c. to $2.50; Grelots, 35c. to $2;

team bells, $1.80 to $5.50; saddle gongs, $1.10 to $2.60.

Horse Blankets—We quote: Jute, unlined $4.50; 3-4 lined $9.50; full lined $12; 16-oz. Hessian, unlined, $6.50; 3-4 lined, $11.50; full lined, $14, and up to $24; Kersey blankets, $9 to $21; all wool, $24, $30, $48 and $60.

Snow Shoes— The leading interest here reports the business to be so great that the demand already threatens to exceed the supply. It would seem that this old pastime is bound to experience a great revival during the coming winter. Prices vary from $15 to $35 per dozen pairs, according to quality.

Ontario Hardware Markets.

Office of HARDWARE AND METAL,
10 Front street east,
Toronto, November 17, 1905.

RECENT advances in the metal markets have had their effect on the finished products and several advances are reported this week in consequence. All grades of shot have been advanced, the discount now being 10 per cent., the former quotation being 15 per cent. Galvanized barb wire has also been advanced 5c., being now quoted at $2.42 1-2 at Cleveland in less than car lots. Wire nails are also being quoted 5c. higher by some jobbers but this advance is not general with the trade.

The past week's business has been one of the largest during the year, being as much as three ordinary weeks. Orders had been held up to the last moment but the near approach of the close of navigation on the upper lakes has been the cause of the tremendous rush of goods out of the warehouses this time. The going into effect of the winter rates on the railroads has not affected general business very greatly as yet. Several orders shipped during the past week were for carloads and in some cases over that amount.

Dealers throughout the country are actively sorting up for the Christmas trade, the volume of cutlery and silverware going out being exceptionally large. Skates, guns and other sporting goods are still meeting with large sales.

Axes and Handles—Orders are very heavy as dealers are sorting for the winter trade.

Cutlery and Silverware—Dealers are getting their Christmas stocks in order and many sorting orders are being given.

Sporting Goods—Shotguns and ammunition are still being called for.

Lawn Mowers—Most of the business has been booked but some dealers have not yet ordered their supply.

Washing Machines—Trade is very active and dealers report increasing sales.

Chain—Cow chain is being included in most orders being placed. Our quotations are: 1-4 inch, $6.50 5-6 inch, $4.45; 3-8 inch, $3.85; 7-16 inch, $3.70; 1-2 inch, $3.55; 9-16 inch, $3.45; 5-8 inch, $3.35; 3-4 inch, $3.25.

Extension and Step Ladders—Manufacturers are rushing to make shipments of goods ordered. We quote: Step ladders at 10c. per foot for 3 to 6 feet, and 11c. per foot from 7 to 10 feet ladders. Waggoner extension ladders, 40 per cent. off.

Galvanized Wire—An advance of 5c. has been made and the market is strong. We still quote: $2.42 1-2 f.o.b. Cleveland.

Barb and Coil Spring Wire— Barb wire has been advanced as reported above.

Wire Nails—Some dealers have advanced prices to $2.15 for direct shipment.

Cut Nails—A very satisfactory volume of business is reported. Quotations are: $2.40 per keg f.o.b. Toronto.

Horse Nails—Blacksmiths' orders are very satisfactory and shipments are large.

Horseshoes—All sizes of steel horseshoes have advanced. Trade is very brisk. We quote: "P.B." base, $3.65; "M.R.M. Co., latest improved pattern" Iron shoes, light and medium pattern, No. 2 and larger, $3.80; No. 1 and smaller, $4.05; snow No. 2 and larger, $4.05; No. 1 and smaller, $4.30; light steel shoes, No. 2 and larger, $4.15; No. 1 and smaller, $4.40; featherweight, all sizes, 0 to 4, $5.75; toe weight, all sizes, 1 to 4, $7.00. If shipped from factory 15c. less.

Horse Blankets—Business in halters, girths, horse blankets and similar goods is active.

Skates and Sleigh Bells—Orders to ship skates and hockey sticks are plentiful. Sleigh bells are practically cleaned up.

Screws—The market is very firm with prices unchanged.

Rivets and Burrs—There is a possibility of higher prices and trade is active.

Bolts and Nuts—Quotations are very strong, but no advance has been made as yet.

Cordage—Quotations continue as follows: Red Cap, 11 1-2c.; Tiger, 10 1-2c.; Standard, 9 1-2c. Cordage: manila, 15c.; British manila, 11 1-2c.; sisal, 10 1-2c.; double lathyarn, 10 1-2c.; single lathyarn, 10c.; sashcord, "Hercules," 30c. to 32c.; "Star," 36c. to 38c.; cotton twine, 3-play, 24c.; 4-ply, 29c.; calking cotton, 16 1-2 to 17c.; cotton waste, colored, 6 3-4c.; white, 11c. to 13c.

Cement—There is still considerable cement being sold for foundations and inside cellar work. Prices are steady. For carload orders f.o.b. Toronto, Canadian Portland, $1.90 to $2.00; American Portland, $1.90 to $2.00. For small orders ex warehouse, Canadian Portland, $2.15 to $2.25; American Portland, $2.15 to $2.25.

Firebrick—A larger trade is reported. Prices continue as before: English and Scotch firebrick, 27c. to 30c.; American low-grade, 22c. to 25c.; high-grade, 27 1-2c. to 37 1-2c.

Building Paper—Shipments continue large. Prices unchanged.

Hides, Etc. — The local market continues to settle to a steadier basis at present quotations. Arrivals are coming to hand plentifully but yet are only found sufficient to supply the steadily increasing demand.

Reports from the Chicago market continue to denote great strength in quotations and are ruling one or two points higher than Canadian prices. Although there is apparently not sufficient reason for the great strength of the United States market the general opinion is that it will maintain its present strong condition for some time.

Domestic dealers are more satisfied with the present condition of the market and although prices would not warrant materially laying in of stocks, it is considered that the condition is more healthy and as long as arrivals are only equal to demand, present prices will continue to rule.

Canadian Metal Markets.

QUEBEC.

Office of HARDWARE AND METAL,
232 McGill Street,
Montreal, November 17, 1905.

COPPER, tin and lead are this week the features of a very strong market. The copper market is distinctly higher and prices have advanced to the jobbers. At time of writing, however, no amendments have been made in prices to retailers and consumers.

Pig lead is now quoted a good 15c. above the prices given in our last report. This advance is accounted for, not only by the increased price of the article, but also partly to the revised schedule of freight rates, the winter rates being now in force. It is likely that the winter basis for pig lead will be even higher than at present.

Antimony is now coming in more regularly and the market is somewhat easier, though listed prices remain the same. The price is somewhat lower on the other side, but local stocks are not yet large enough to permit any shading on the figures quoted, except for big quantities.

Canada Plates—Demand is fine, and prices are unchanged. Our quotations are as follows: 52's, $2.50; 60's, $2.55; 75's, $2.60; full polished, $3.60; galvanized 52's, $4.00; 60's, $4.25.

Copper—The jobbers are confronted with an advance made by the refiners, but they have not raised their prices at time of writing. We quote: Ingot copper, 17 3-4c.; sheet copper, 24 3-4c.

Ingot Tin—The market is advancing apace and it is expected that the jobbers will have to raise their prices again

very shortly. We quote: 36 1-2 to 37c. per pound.

Pig Lead—A sharp advance has occurred as the result of increased freight rates as well as the natural tendency of the market. We are now quoting: $4.05 to $4.15 per hundred pounds.

Boiler Tubes—We quote: British and American tubes, 1 1-2 inch, 8 1-2c.; 2 inch, 8 1-2c.; 2 1-2 inch, 10c.; 3 inch, 12c.; 3 1-2 inch, 15 1-2c.; 4 inch, 20c.; 5 inch, 45c. Price per foot net.

Pig Iron—An advance in Summerlee has been reported. We quote as follows:

"Disc," No. 1	$16.50	delivered	Montreal.
"Dom.," No. 1	17.50	"	"
Usual difference in price for lower grades.			
Ferrona No. 1	$18 00	delivered	Montreal.
" No. 2	17.50	"	"
" No. 3	16 50	"	"
" No. 4	16.00	"	"
Londonderry	$19.50 to $20.00	"	"
Gartsherrie	21.25	"	"
Carron No. 1	22.50	"	"
" (special)	21.50	"	"
Summerlee No. 1	22.00	"	"
Clarence No. 1	19 50	"	"
" No. 3	19 00	"	"
No. 1, Cleveland	19.00	"	"

Tool Steel—We quote as follows: Colonial Black Diamond, 8c. to 9c.; Sanderson's, 8c. to 45c., according to grade; Jessop's, 13c.; Jonas & Clover's, 10c. to 20c.; "Air Hardening," 65c. per lb.; Conqueror, 7 1-2c.; Conqueror High Speed steel, 60c.

Merchant Steel—The advances made last week have been held firm. We quote: Sleigh shoes, $2.07 1-2, tire, $2.22 1-2; spring, $2.75; toecalk, $2.77 1-2; machinery iron finish, $2.17 1-2; reeled machinery steel, $2.75; mild, $2.07 1-2 and upwards; rivet, $2.07 1-2 and upwards. Net cash 30 days.

Cold Rolled Shafting—We quote: Cold rolled shafting, 3-4 inch to 7-16, $3.75 per 100 lbs.; inch and a half to 3 inch, $3.50 per 100 lbs.

Galvanized Iron — There is a very large demand for galvanized sheets and the result has been an even firmer condition in the trade. Our quotations are as follows: Queen's Head, 28 gauge, $4.10; 26 gauge, $3.85; 22 to 24 gauge, $3.60; 16 to 20 gauge, $3.35; Apollo, 28 gauge, $4; 26 gauge, $3.75; 22 to 24 gauge, $3.75; 16 to 20 gauge, $3.40; Fleur-de-Lis, 28 gauge, $3.85; 26 gauge, $3.60; 22 to 24 gauge, $3.35; 16 to 20 gauge, $3.10; Comet, 28 gauge, $3.85; 26 gauge, $3.60; 22 and 24 gauge, $3.35; 16 to 20 gauge, $3.10; Bell brand, 28 gauge, $4.20 to $4.25; Gorbal's "Best Best," 28 gauge, $4.10, "Windmill Best," 28 gauge, $3.95; Sword and Torch, 28 gauge, $4.05; in less than case lots 25c. extra.

Black Sheets—No further changes in quotations have been made during the past week. Our prices are as follows: 28 gauge, $2.25; 26 gauge, $2.20; 22-24 gauge, $2.15; 19-20 gauge, $2.15; 8-10 gauge, $2.30.

Antimony—Although general conditions are somewhat easier, the price given below will only be shaded for large quantities; 14 1-4 to 14 1-2c. for Cookson's.

Tin Plates—The continued strength of the market in ingot tin is keeping the following prices very firm: Cokes, $3.75; charcoal, $4.00.

Terne Plates—Demand is good. We are quoting $6.75.

Ingot Zinc—The heightened tone noted last week is being maintained. We still quote: 6 3-4 to 7c.

Sheet Zinc—Existing conditions will tend to higher prices before long. In the meantime the following quotations are being held firm: In casks, 7 3-4c. sheet, 8c.

Bar Iron — Last week's advanced price still rules the market. We quote: $1.97 1-2 f.o.b. Montreal.

Old Material—There is still considerable excitement in the old rubber situation. Stocks are almost bare and dealers who are holding any are expecting to get much higher prices than are at present ruling. Nothing new has developed in scrap metals. Cast iron continues to be in good demand, but so far as wrought scrap is concerned, the rolling mills control the situation here. Prices are kept at the same figure and dealers appear to be selling right along, rather than take chances in stocking up for higher prices, which, before spring, are likely to be given. At the present time iron outside of Montreal is commanding much higher prices. We quote the following prices: Copper wire, 13 3-4c.; light copper, 12 3-4c.; heavy red brass, 11 1-2c.; yellow brass, 9 1-4c.; light brass, 6 1-2c.; lead, 2 3-4c.; zinc, 3 3-4c.; machinery cast scrap, $13; wrought scrap, $12: stove plate scrap, $9; mixed rags, 75c. to 90c. per 100 lbs.; old rubbers, 7 1-4c. to 7 1-2c.

ONTARIO.

Office of HARDWARE AND METAL,
10 Front Street East,
Toronto, Nov. 17, 1905

LARGE importations have been made during the past week by jobbers who desire to get stocks of metals in before the close of navigation on the St. Lawrence. Stocks are now in fairly good shape, there being no shortages worth reporting.

Bar iron has advanced 5c. and is exceptionally strong. Pig iron is also very firm and Londonderry is now commanding $17 at the furnace. Lead is fairly strong at the recent advance, but sales are not very large owing to the high price. Copper is quite active, with outside markets reporting advancing prices.

Pig Iron—Prices are very firm and Londonderry is commanding increased figures. We quote:

Middlesboro, f.o.b., Toronto	$22 50
Hamilton, No. 1, at furnace	18 50
" No. 2, "	18 00
Midland, No. 1, "	18 50
" No. 2, "	18 00
Radnor, at furnace	31 50
Londonderry, at furnace	17 00

Bar Iron—Another advance of 5c. has been made. Business is very lively We quote $2.00 base, f.o.b. Toronto, with discount of 2 per cent. net cash.

Tin—Prices are unchanged with the market active.

Tin Plates— Demand is active with prices very firm.

Galvanized Sheets—Prices are firm in the outside markets, the demand continuing active locally.

Brass— Conditions are unchanged, business being active. Discounts continue at 10 per cent.

Lead—The market is firm with little business offering owing to high prices. We quote as follows: Pig lead, $4.25 per 100 lbs., and bar lead, $4.80 per 100 lbs.

Zinc Spelter—The market is more active with prices unchanged. We quote: 7c. per lb. for foreign and 5 1-2 to 5 3-4c. per lb. for domestic.

Copper—Outside markets are advancing and the local market is strong and active. We quote: Ingot copper, $17.50 per 100 lbs., and sheet copper, $21.00 per 100 lbs.

Antimony—There is a better demand with stocks in hand light.

Old Material—Iron, lead, copper and brass are all in strong demand. Dealers' buying prices are as follows: Heavy copper and wire, 13c. per lb.; light copper, 12c. per lb.; heavy red brass, 11 1-2c. per lb.; heavy yellow brass, 9c. per lb.; light brass, 7 1-2c. per lb.; tea lead, $2.40 per 100 lbs.; heavy lead, $2.75 per 100 lbs.; scrap zinc, 4c. per lb.; iron, No. 1 wrought, $8 to $8.50, No. 2 wrought, $3 to $5; machinery cast scrap, $13; stove plate, $10; malleable and steel, $5; old rubbers, 7c. to 7 1-4c. per lb.; country mixed rags, 75c. per 100 lbs.

Coal—There is little change in this market, prices being steady and a good trade being done. We quote: Anthracite in cars at bridges, grate, $5.25 per gross ton; egg, stove and nut, $5.50 per gross ton; pea, $3.90 per gross ton.

Standard Hocking, soft coal, in cars, f.o.b. at mines: Lump, $1.35; 3-4 inch, $1.25; run of mine, $1.05; nut, 90c.; N. P. and S., 60c.; slack, 40c.; box cars 10 cents per ton additional.

Youghiogheny soft coal in cars, bonded at the bridges: 1 1-4 inch, $2.45; 3-4 inch, $2.35; mine run, $2.35; slack, $1.80 to $1.90.

For Manitoba, British Columbia and Maritime Provinces markets see pages following.

UNITED STATES METAL MARKETS

Advance proofs furnished HARDWARE AND METAL by The Iron Age, November 16, 1905.

THERE continues to pour in from all quarters evidence of the enormous current consumption of iron and steel, with ample proof in the form of fresh orders that there will be an unabated strain upon our productive facilities for many months to come.

There is no truth in the report given wide currency that the Steel Corporation had purchased 50,000 tons of Bessemer pig for the first quarter from the Valley furnaces. It is understood that negotiations are pending, however.

During the past week the pig iron markets have hardened further. As

much as $17.50 has been paid for a lot of 3,000 tons of Bessemer to a Valley furnace to go to an Ohio River steel plant. The demand from steel makers has made malleable Bessemer very scarce and the foundries which need this grade are facing a troublesome situation. Some business has been done in Eastern Pennsylvania in basic pig at $17.50 delivered, and it looks as though there may be a shortage during the Winter. A western steel plant has bought 14,000 tons of basic pig, of which 6,000 tons went to southern producers and the balance to northern furnaces.

It is understood that early last week the cast iron pipe interests purchased 20,000 tons of pig iron and that further considerable quantities are wanted, although buyers seem to shy at present prices. So far as southern makers are concerned, the largest are demanding $14.50 for No. 2 at Birmingham, but there is still standard iron available at $14. The Lake Superior charcoal producers have put up prices $1 per ton to $18 at furnace.

Contracts for steel rails closed during the week foot up a tonnage in excess of 100,000 tons. This includes 25,000 tons for the Boston & Maine, 25,000 tons additional for the Harriman lines, making the total for that interest close to 170,000 tons, 12,500 tons for the Minneapolis, St. Paul & Sault Ste. Marie, 10,000 tons for the Pacific & Idaho Northern, and 9,000 tons for the Yosemite Valley.

The report that a Spanish mill had captured business on the Pacific Coast is denied. It probably grew out of the fact that three months ago the Altos Hornos de Viscaya, of Bilbao, did take a contract for 11,000 tons of steel rails for shipment to Mexico.

The plate mills are swamped with orders, among the latest being the material for an additional lake boat, captured by Chicago. It is possible that prices will be moderately advanced this week.

The pressure for structural material continues unabated, but the new tonnage being placed is moderate. Among the business coming up is 8,000 tons for an extension of the Northwestern Elevated in Chicago.

In castings a very big order has just been awarded by the builders of the McAdoo Tunnel. The quantity involved is about 40,000 tons, which is a little over one-half of the requirements.

Bids for 7,800 tons of cast iron pipe were opened in this city this week, but the contract is not yet awarded. Next week is to bring the letting of 30,000 tons for this city and of 7,000 tons for Providence.

The troubles in Russia have had a sharp effect upon the price of Ferromangese, which has been jumping lately. The usual supply of high grade low phosphorus ores from the south of Russia, which has been hampered for some time past, is now seriously threatened.

LONDON METAL MARKETS.

From Metal Market Report, November 15, 1905.

Pig Iron—Cleveland warrants are quoted at 53s. 9d, and Glasgow Standard warrants at 52s. 4d, making prices as compared with last week 2s. higher for Cleveland warrants and 1s. 7d higher for Standard warrants.

Tin—Spot tin opened firm at £152, futures at £151 5s., and after sales of 350 tons of spot and 320 tons of futures closed firm at £152 2s. 6d for spot and £151 10s. for futures, making price as compared with last week £1 4s. 6d higher on spot and £1 12s. 6d higher on futures.

Copper—Spot copper opened strong at £75 10s., futures £72 10s., and after sales of 600 tons of spot and 600 tons of futures, closed strong at £75 5s. for spot and £72 15s. for futures, making price as compared with last week £2 10s. higher on spot and £1 higher on futures.

Lead—The market closed at £15 6s. 3d, making price as compared with last week 5s. higher.

Spelter—The market closed at £28 10s., making price as compared with last week 2s. 6d higher.

MINES AND METALS.

The Dominion Coal Company may this Winter ship several cargoes of coal to Vera Cruz for consumption by the Mexican Heat & Power Company, in which James Ross and other Canadian capitalists are interested. A cargo sent last year to Vera Cruz is said to have been satisfactory to the Mexican enterprise.

It has been stated recently that an order for 1,500 steel passenger cars is about to be placed by the Pennsylvania Railroad. The Pennsylvania Railroad has withheld its order for passenger equipment for next year until the feasibility of using steel passenger cars could be thoroughly investigated. It is intended to use the steel cars on the Pennsylvania road's many fast trains, and their adoption will reduce the possibility of fatalities in wrecks to the minimum, as well as eliminate the liability of telescoping. The cost of the proposed order is estimated at about $5,000,000.

* * *

The total output of the Dominion Coal Co. for October was 333,317 tons. Shipments amounted to 323,884 tons. The total output of the collieries for September was 322,288 tons, and shipments were 299,403 tons. The total output for October shows an increase over that of last year of 11,029 tons, and increase in shipments of 24,461.

* * *

The Crucible Steel Company has disposed of some large steam hammers that had been located in the abandoned works of that corporation in Beaver Falls, Pa., to a new company to be known as the Grays Harbor Steel Company and the plant of which will be located at Grays Harbor, Wash. The new plant will manufacture crucible steel under a new process invented by John Barrett, of New Brighton, Pa., who has joined a Cincinnati company in promoting the new enterprise. The plant, it is claimed, will manufacture crucible steel on a new basis and will reduce the cost of production materially. The purpose of going to the Pacific coast with the plant is said to be due to the fact that close by its site is a large deposit of iron ore in British Columbia that is exceedingly rich.

Dealers are becoming more fully aware every year of the superior quality and advantages of the "Metallic" Sheet Metal goods.

The quality of steel that goes into them costs us more than most makers pay, while superior galvanizing gives our zinc-covered metal a weather resisting quality and capacity for wear unequalled by any other brand. There are no raw edges on our "Eastlake" galvanized steel shingles because every part is thoroughly zinc covered by separate dipping.

OUR NEW $10,000 CATALOGUE We have just issued the most complete Catalogue ever offered to the Metal Trade. It is a veritable encyclopædia of all that's practical and beautiful in the Art Manipulation of Sheet Metal. Book contains 440 pages, superbly bound and illustrated. We send it free upon request, to any builder, contractor or dealer of responsibility.

THE METALLIC ROOFING CO.

OF CANADA, Limited

(Established Twenty Years)

Toronto Winnipeg

We also manufacture:
- "Metallic" Ceilings and Wall Plates
- "Metallic" Cornices, Skylights and Ventilators
- "Metallic" Sheet Metal Fronts
- "Metallic" Siding (stone, brick, etc.)
- "Impervia" Fireproof Windows
- "Empire" Metallic Shingles
- "Metallic" Crestings and Finials
- "Metallic" Corrugated Iron
- "Hayes" Metallic Lathing
- "Metallic" Eavetrough and Conductor Pipe
- "Metallic" Pressed Zinc Ornaments
- "Richardson's" Pressed Metal Doors and Sheet Metal Building Materials of every description.

411

Nova Scotia Trade News

Halifax, N.S., Nov. 15.

ACTIVITY continues in the hardware trade throughout the Province. Jobbers report good orders coming in from the various sections and that they are kept busy filling them. Lumbermen's supplies are being bought largely, and every preparation appears to be made for a big cut this season. Axes are not selling as freely as heretofore, the saws, which are found to be a success, replacing them in many instances. Tarred paper and tarred felt are also selling very freely, the lumbermen using much of these materials for the covering of shacks in the woods.

* * *

All the metals continue firm and with a good demand. The jobbers here have not yet been able to replenish their low stocks to any extent owing to the high prices. There is also a good demand for glass. The price is high and the stocks low. Dealers asked for quotations on glass positively declined to name prices owing to the condition of the market.

* * *

The Sydney rail mill is now shipping six or seven carloads of rails daily to the Intercolonial Railway at Moncton. Some time ago the I.C.R. placed a large order for rails with the steel works at Sydney, and the rails now arriving are the first of the order. The new rails are to be used as wanted at different points along the line as the old ones give out. The three big companies operating in Cape Breton employ 13,600 persons, and the monthly wages amount to $650,000.

	Men employed.	Monthly pay roll
Dom. Iron & Steel Co.	3,000	$175,000
Dominion Coal Co.	8,000	350,000
N. S. Steel & Coal Co.	2,600	129,000
Total	13,600	$650,000

To the above must be added the figures of a large number of smaller companies, such as the coal companies of Port Morien and Broughton. Besides the above many hundreds of men are employed in other enterprises, and it is estimated that the wages paid must reach nearly $9,000,000 per annum.

* * *

The Nova Scotia Steel & Coal Co. is to erect at Sydney Mines a large structural device for the bunking of coal during the Winter. It will be a facsimile of the endless haulage system attached to the towers of the company's quarry at Point Edward, which consists of two gigantic towers revolving in a circle at a distance of 250 yards from each other. The aerial railway between the towers will carry the coal in a scoop and deposit in any desired place within the radius of the circle. Besides being of considerable economic benefit to the company it will obviate the necessity of a large number of men suffering in the cold at such an exposed place as at Cranberry Head during the Winter.

A good many hardware stores will be very attractive during the coming holidays, while a goodly number will present the same old appearance. It is easy to tell which will get the patronage.

BAD FAILURE AT LEVIS.

Tffe Bank of Montreal on Wednesday of this week filed a demand for an assignment on the part of Carriere & Laine, Levis, one of the oldest firms of founders in the Province of Quebec. The failure of this firm will be felt all over the Province, and the list of creditors is a long one. Indeed, it is said that the liabilities will total nearly a million dollars.

The firm was founded in the year 1862 by Messrs. Wm. Carriere and Racine, and did a large business in stove, machine, engine and boiler manufacture. At one time they were engaged in ship building, and they have lately conducted a hardware store in Quebec.

The works did not shut down on account of scarcity of work, as they had a number of good jobs under way when the Bank of Montreal made the demand for their assignment. In the meantime, it is rumored that the works are likely to pass into the hands of a syndicate or be purchased by the Federal Government to be used as workshops connected with the Intercolonial Railway.

Arrangements have been made whereby The Canadian Fairbanks Company, Ltd., have been appointed sales agents for The John Bertram & Sons Company. Messrs. John Bertram & Sons Company have long been known as leading Canadian machine tool builders, and the product of this company has reached a standard which has brought them in the front rank of machine tool builders in any country. They have recently become identified with the Niles-Bement-Pond Company, and with the facilities offered by this company, we will be able to offer the Canadian public the very latest and best machine tool construction.

IN THE LEAD!

WINNIPEG, CANADA

Hardware and Metal Conditions in Manitoba.

(Market quotations corrected by telegraph up to 12 a.m. Friday, Nov. 17, 1905.)
Office of HARDWARE AND METAL
Room 511, Union Bank Building,
Winnipeg, Man.

BUSINESS continues surprisingly brisk in almost all lines of hardware. Prices are steady throughout almost the entire list, and there are few changes to record. It has been announced that bluestone will be sold for delivery next season at $5.75 per cwt., the same price as last year. Pressed spikes have been advanced 25c. per keg. All lines of heavy goods are moving rapidly.

Game Traps—There is a brisk trade at following unchanged prices:

H. & N., discount	50 and 5 p.c.
Victor, "	66⅔ p.c.
Newhouse, "	35 p.c.
Bear	$7 each

Lanterns—Wholesale prices are steady at the following figures:

Cold blast lanterns	$4 75 per doz.
Coppered cold blast lanterns	6 75 "
Cold blast dash "	7 25 "
Lift Lanterns	4 25 "

Wire—Prices are steady. We quote:

Barbed wire, 100 lb	$3 00
Plain galvanized 6 to 8	3 39
" 9	2 50 2 90
Plain galvanized 10	3 50
" 12	3 10
" 13	3 20
" 14	3 90
" 15	4 45
" 16	4 60
Plain twist	3 00
Staples	3 50
Oiled annealed wire 10	2 96
" 11	3 02
" 12	3 10
" 13	3 20
Oiled annealed wire 14	3 30
" 15	3 45

Annealed wires (unoiled) 10c. less.

Horseshoes—Prices are steady since the recent advance noted two weeks ago. We quote again as follows:

Horseshoes, iron, No. 0 to No 1	$4 65
No. 2 and larger	4 40
Snow shoes, No. 0 to No. 1	4 90
No. 2 and larger	4 65
Steel, No. 0 to No. 1	4 90
No. 2 and larger	4 65

Horsenails—Discounts are as follows: "C" brand, 40, 10 and 7 1-2 per cent., "M" brand and other brands, 55 and 60 per cent. Add 15c. per box.

Wire Nails—Immense quantities of wire nails are being hurried in before the close of navgation. The price has been steady since the decline to $2.60 per keg.

Cut Nails—Price, $3.00 per keg, base price. None selling because of the low price of wire nails.

Pressed Spikes—An advance of 25c. per keg went into effect the first of the week. Prices are quoted as follows:

Pressed spikes, ¾ x 5 and 6	$4 60
" " 5-6 x 5, 6 and 7	4 25
" " ⅝ x 6, 7 and 8	4 10
" " 7-16 x 7 and 9	4 00
" " ½ x 8, 9, 10 and 12	3 90
" " ⅝ x 10 and 12	3 75

Screws—No change in price. Demand continues brisk at following unchanged discounts:

Screws, flat head, iron, bright	85 and 10 p.c.
Round " "	80 p.c.
Flat " brass	75 and 10 p.c.
Round " "	70 and 10 p.c.
Coach	70 p.c.

Nuts and Bolts—Discounts are unchanged. We quote:

Bolts, carriage, ⅜ or smaller	60 and 5 p.c.
" 7-16 and up	55 p.c.
Bolts, machine, ⅜ and under	55 and 5 p.c.
" 7-16 and over	55 p.c.
Bolts, tire	65 p.c.
Bolt ends	55 p.c.
Sleigh shoe bolts	65 and 10 p.c.
Machine screws	70 p.c.
Plough bolts	55 p.c.
Square nuts, case lots	3c. discount.
" " small lots	2½c. "
Hex " case lots	3c. "
" " smaller lots	2½c. "

Rivets—Discounts continue as follows:

Rivets, iron	60 and 10 p.c.
Copper, No. 8	29½
" No. 12	33

Coil Chain—Unchanged in price. We quote:

Coil chain, 3-16 inch	9.25
" ¼ inch	7.20
" 5-16 inch	5.20
" ⅜ inch	4.60
" 7-16 inch	4.45
" ½ inch	4.30
" ⅝ inch	4.10
" ¾ inch	4.00

Shovels—Discounts on spades and shovels continue 40 and 5 per cent.

Harvest Tools—Discounts are now 60 and 5 per cent.

Axe Handles—Quoted as follows:

Axe handles, turned, s.g. hickory, doz	$3 15
No. 1	1 90
No. 2	1 60
Octagon extra	2 30
No. 1	1 60

Axes—Prices are quoted as follows:

Bench axes, discount off list	40 p.c.
Broad " " "	25 p.c.
Royal Oak, per doz	$ 6.25
Maple Leaf, "	8.25
Model "	8.50

Copper King, per doz	9 00
Columbian, "	10.75
Handled axes, North Star, per doz	7.75
" " Black Prince, per doz	9.25
" " Standard Flint Edge, per doz	10.50
" " Copper King, per doz	11.00

Butts—The discount on wrought iron butts is 70 per cent.

Churns—The discounts from list prices are 45 and 5 per cent.

Chisels—Quoted at 70 per cent. off list prices.

Auger Bits— Discount on common auger bits is 65 per cent.

Blocks—Discount on steel blocks is 35 per cent. off list prices; on wood, 55 per cent.

Fittings—Discounts are quoted as follows:

Wrought Couplings	60 p.c.
Nipples	65 and 10 p.c.
T's and elbows	10 p.c.
Malleable bushings	50 p.c.
Malleable unions	60 p c.

Grindstones—The price is now 1 3-4c. per lb.

Fork Handles—The discount is 40 per cent. from list prices.

Hinges— The discount in light "T" and strap hinges is 65 per cent. off list prices.

Hooks—Prices are quoted as follows:

Brush hooks, heavy per doz..... $8.75
Grass " per doz 1.70

Draw Knives—The discount is 70 per cent. from list prices.

Rules—Discounts are 50 and 10 per cent.

Washers—On small quantities the discount is 35 per cent.; on full boxes it is 40 per cent.

Wringers—Selling at following prices:

Boval Canadian, per doz..... $30.05
R. B, per doz..... 34.07

Files—The discount on "Arcade" files is now 75 per cent. We quote as follows:

" Arcade " ..... 75 p.c.
" Black Diamond " ..... 60 p.c.
" Nicholson's " ..... 62½ p.c.

Building Paper—Business is still very active in all lines of building paper. We quote:

Joliette, plain	40c.
" tarred	65c.
Cyclone, plain	55c.
" tarred	80c.
Anchor, plain	55c.
" tarred	65c.
Pure fibre, plain	60c
" tarred	80c.

Tinware, Etc.—We quote again as follows:

Tinware, pressed, retinned..... 70 and 10 p.c.
" " plain..... 75 and 2½ p.c.
" pieced..... 30 p.c.
Japanned ware.....37½ p.c.
Enamelled ware, white..... 45 p.c.
" Famous..... 50 p.c.
" Imperial.....50 and 10 p.c.

Cordage—The price has been steady since the advance noted last week. We quote:

Rope, sisal, 7-16 and larger, basis..... 11 25
Manila, 7-16 and larger, basis..... 15 75
Lathyarn..... 11 25

Solder—Quoted now at 21c. per lb. with concessions for large quantities.

Corrugated Roofing and Siding—Prices are still quoted as follows:

ROOFING.

(Lengths 3, 4, 5 and 8 ft.)

	Painted	Galvanized

Swedish iron (basis)	4 75
Sleigh shoe steel	2 75
Spring steel	3 25
Machinery steel	3 50
Tool steel, Black Diamond, 100 lb	9 50
Tesson	13 00

Black Sheets—No change in price. We quote as before:

Black Sheets, 10 to 16 gauge, 100 lb	3 50
18 to 22 gauge	3 75
24 gauge	3 90
26 gauge	4 00
28 gauge	4 10

Galvanized Iron—The market is steady at the recent advance. We quote:

Apollo, 16 gauge	3 90
18 and 20 gauge	4 10

Sheet Zinc—There has been a sharp advance and the price is now $8.50 for cask lots and $9.00 for broken lots.

Pig Lead—$4.50 per 100 lbs.

Iron Pipe—As noted last week, there have been some advances in iron pipe. Prices are now quoted as follows:

Black iron pipe, ⅛ inch	....
" ¼ "	2 55
Black iron pipe, ⅜ inch	2 85
" ½ "	3 15
" ¾ "	4 00
" 1 "	5 75
" 1¼ "	7 85
" 1½ "	9 40
" 2 "	12 90

Petroleum and Gasoline— Prices are still quoted as follows:

British Columbia Trade News

Vancouver, B.C., Nov. 9, 1905.

At the meeting of the Vancouver Board of Trade this week Mr. R. P. McLennan made the rather startling statement that smuggling on wholesale scale was carried on at the international boundary near Blaine and Sumas, the two United States towns on the border and south of the Fraser River. Mr. McLennan urged the Board to take some action. He said that it was a matter of common knowledge that whole wagonloads of goods were bought on the other side of the line and driven into British Columbia without the least attempt at concealment. He knew of a case where a man built a house, buying not only the lumber and materials but the furnishings in Blaine and bringing all into Canada without paying a cent of duty. Resolutions were passed dealing with the matter.

* * *

One big freight steamer from Liverpool only cleared last week after leaving hundreds of tons of cargo, mainly metal manufactures, at British Columbia ports, and another, the Tydeus of the Blue Funnel line direct from Liverpool is in port and discharging. She brings for British Columbia mainly glass, structural steel, iron and steel in bars and plate, cement, firebrick, wire, etc. The Tydeus will take out large consignments of salmon and will also load several hundred thousand feet of lumber.

* * *

Dawson business men are endeavoring to secure the opening of an outport of entry for the United States Customs somewhere in the Tanana, which is in American territory. That district depends on Dawson largely for its supplies, and the nearest Customs port of entry is at Eagle, 700 miles from Tan-

ana. The fact that most of the supplies for Dawson, and which are sold by Dawson merchants to the Tanana country, come from British Columbia coast cities makes it interesting to Vancouver and Victoria business men. As the United States vessels are permitted to carry from Vancouver goods destined to Dawson, or between two Canadian ports, which is opposed to the Customs law, there has to be a special order made every year. The suggestion is to hold this privilege up as an inducement to have the desired port of entry established in Tanana.

* * *

The first grain elevator in Vancouver, and the first of many, it is fondly hoped by those who are struggling to turn Alberta wheat this way, is now under construction. Messrs. C. E. Hall & Sons, of Manitoba, are the firm engaged in erecting the elevator, which is of large cauacity, and the builders say that it is to be followed by a large flouring mill for export trade.

* * *

A new plumbing firm, R. E. Grosse & Son, has been formed in Vancouver. Capt. Grosse is better known as a veteran in local marine circles, while his son has been connected with the plumbing trade, with M. S. Rose, for many years.

* * *

The British bark Dundee which had such a trying experience since leaving Bremen, where she took on her cargo of cement, is now in Tacoma discharging cargo, consisting of 10,000 barrels of Portland cement. Part of her cargo was discharged at Seattle. The Dundee sighted Cape Horn four times in making the voyage and being driven back by stress of weather every time, Captain Stephens altered his course and sailed east round the Cape of Good Hope, crossing the Indian and Pacific oceans instead. On the way eleven of the crew mutinied and when in Singapore they were tried and punished.

* * *

Some of the merchants have discovered that freight shipped from Japan to Calgary is carried for a less rate right through to Winnipeg and back again than from Vancouver direct. This, it is claimed, is a direct handicap on many lines which Vancouver wholesalers might otherwise handle from their location here. The anomaly is one of the freight matters which the C.P.R. will be asked to explain while freight rates are under discussion.

* * *

The Vancouver Board of Trade received a letter at its meeting this week from the Toronto Board, enclosing a strong resolution against the tax on travelers in British Columbia, and asking that the Dominion Government disallow the Act, reconsidering its decision already made. No action was taken by the local board, the matter being considered settled.

* * *

Three large tank steamers have been purchased by the Union Oil Co. of California to carry oil to Puget Sound and British Columbia ports. They are the Roma, capacity 27,500 barrels; Washtenaw, capacity 28,500 barrels, and the Lansing, capacity 47,000 barrels. They were formerly the property of the Michigan Steamship Co. and their addition to the Union Oil Co.'s fleet makes that concern one of the largest operators of tank steamers in the world. The vessels regularly visit Vancouver with oil for the British Columbia Sugar Refinery, which uses that fuel.

* * *

A water company is being formed at Dawson to install a system in the Klondike hills. This is separate from the big scheme which the Dominion Government has had in hand all the past season, for bringing water to practically all parts of the benches and hillsides of the Klondike. O. R. Brener and Messrs. McDonald, Barrett, Palmer, McNamee, Hitchcock and Kelly are the incorporators.

* * *

The report of City Engineer Clements to the Vancouver Water Works Committee contemplates the expenditure of a total sum of nearly three-quarters of a million dollars in installing a high level system to serve the southern portion of the city, on the heights of Fairview and Mount Pleasant. This includes also a high pressure main along the water front of the city proper, and a new intake in the valley of Capilano River, the source of supply in the mountains across the inlet.

* * *

Mr. R. P. Butchart, of the Vancouver Portland Cement Co., Victoria, is on his way to Calgary again to superintend the erection of the large plant his company is erecting there. The cement industry is to have some competition in the west, in addition to the imported article, for the same concern which manufactures the article in a large way at Hull, P.Q., is building a plant at Kananaskis, some thirty miles or more west of Calgary. Messrs. Hassan and Diver of the company were in Vancouver this week buying supplies and contracting for material. The works will be ready for operation in the Spring.

* * *

The lumber association has issued its new price list which shows the increase of $1 per thousand on all classes of lumber, as well as the increase in delivery charge from 75c to $1 per thousand. Trade in lumber is still extremely active, notwithstanding the fact that cars for shipment to the Northwest are necessarily scarcer at this season on account of the heavy grain movement from the prairies east. But all cars coming west with freight are sure to go back loaded with lumber.

Local lumber demand is still good, as the remarkably fine Fall weather the coast is now experiencing has given building an impetus not usual at this season. There is as great activity in new buildings at the present moment as there was at midsummer.

William Starke, President Starke Hardware Co., Montreal, ex-president Canadian Wholesale Hardware Association, one of the Canadian delegates to Washington.

WATT & SQUIRE

BRANTFORD, ONTARIO

THE MINING INDUSTRY IN NOVA SCOTIA

CONSIDERABLE interest is being shown in Halifax in promoting a wider and more scientific development of the mineral resources of the Province. The mining industry is only second in importance to agriculture, and is the equal of the fishing industry. Nova Scotia is richly endowed with a diversity of precious and economic minerals, but coal is the only mineral which can be considered as having been mined in an extensive or scientific fashion. The general demand now is that gold, iron, copper, lead, and other metals be taken up and their occurrence investigated in a serious and business-like way. The Government of the Province is lending practical encouragement to the new interest which business men and others are beginning to take in the possibilities of mixed mining development. As a result of a joint request by the mining society and board of trade, the Government engaged an American expert, Mr. T. A. Reckard, of New York, to investigate the gold measures of the Province and report upon the probability of deep mining being successfully prosecuted here as at Bendigo, Australia, where mines are working at a vertical depth exceeding 4,000 feet, employing large capital and creating a stable and permanent industry. Mr. Rickard's report will be presented in December. Should it be favorable, and coming from an engineer of international reputation, the result cannot fail to be to attract the attention of English and American capitalists to the gold fields of this Province.

Government Granting Assistance.

The Government of the Province has decided to take the same course with reference to iron mining, and has asked a committee of the mining society to submit names of eminent German and American iron mining experts, with a view to retaining the best man possible to obtain to report upon the iron ores of the Province and stimulate the production of native iron ores, to displace the immense quantities of imported ore used at the steel works at Sydney, Cape Breton. At the same time an influential section of the Halifax press is urging the Dominion Government not to renew the bounties on steel as now arranged, but so adjust any extension of the duration of the bounties which may be agreed upon as to make it a greater object than at present for people to mine native iron ores, and for the steel companies to use native ore. The production of native ore has declined in the last twenty years largely because of the ores imported from Belle Isle, Newfoundland. The public are commencing to take an interest in matters relating to mining, and the situation as regards iron ore production is one which they think should be changed.

Can Copper Mining be Developed?

Another mineral which is receiving considerable attention just at present is copper. Very little thought has been accorded copper in the past, but people have had their interest aroused in the subject by the prevailing high price of the metal, and they are inquiring if there is copper in Nova Scotia, and

Hardware Store Business Methods

Compiled and Edited by R. R. WILLIAMS, Hardware Editor of the IRON AGE.

The thorough and practical treatment of the important subjects discussed, the embodiment in these articles of the experience of men of ability and enterprise, the suggestiveness of the principles and maxims thus presented, will, it is hoped, render the volume useful to many and tend to elevate still further the business methods of the hardware trade.

Cloth bound, Price, postpaid **$1.00**

The American Hardware Store

A Manual of Approved Methods of Arranging and Displaying Hardware.

By R. R. WILLIAMS, Hardware Editor of the IRON AGE.

This book is descriptive of the best methods of accommodating and displaying the large variety of goods which are carried in stock in representative American and Canadian hardware stores. Copiously illustrated, and worth many times its cost to every progressive hardware dealer.

Cloth bound, 6¾ x 9¾, 576 pages. Price, postpaid. **$3.00**

whether the local conditions are favorable for its production at competitive prices. The latter part of the query has been determined satisfactorily, and it is apparent, with abundance of coal and limestone in the Province, cheap ocean transportation to the markets of the world, moderate-priced labor of good quality, ample timber and water power, the conditions for copper production could hardly be better. As regards the existence of copper ores nothing much was known prior, possibly, to a few years ago. There was evidence of copper at various parts of the Province proper, and in Cape Breton, but no real serious effort had ever been made to determine its extent.

Newfoundland has been mining copper ore for years and shipping 100,000 tons annually to chemical and reduction works in Wales and New Jersey. Now it is found that the same formation extends through Nova Scotia, New Brunswich, Quebec, and Labrador, and Dr. E. D. Peters, Jr., the eminent Harvard writer and practical authority on copper, declares that all the district covered by the Provinces surrounding the Gulf of St. Lawrence is a copper region. So that central reduction works located at the Cape Breton coal fields, where fuel and other supplies for smelting are cheap, could draw ores by cheap water freight from Newfoundland and all parts of the Atlantic Provinces. That Dr. Peters is probably correct in his geological diagnosis is evidenced by the advances made in copper development during the past year or two.

Copper Mines Working.

A number of promising beds of copper ore have been found on the Bay of Fundy, in New Brunswick, and also on the opposite side of the Bay in Nova Scotia, and several mines have been opened to a depth of 200 feet, showing no diminution of the quality or quantity of the red metal, and the work is being actively prosecuted. Promising copper finds have also occurred in Guysboro and Antigonish counties, Nova Scotia. But, perhaps, the most valuable of all is an immense body of copper ore, carrying gold and silver found at Cheticamp, Cape Breton, which Dr. Gilpin, head of the Mines Department of Nova Scotia, and other prominent professional men, says promises to rank among the largest copper mines in the world. Halifax people are furnishing the capital for the thorough prospecting of this copper bonanza, and if it turns out as present conditions indicate a large copper smelting industry is likely to be established in Cape Breton. The local Government are giving the work the strongest possible encouragment, and there seems a good chance of extensive copper works being developed here in the next year or two.

The prospect, generally, for mining, was never better, and, of course, that will help trade very much, as activity in mining means large increase in the wage-earning population, and, consequently, in the money distributed in staple supplies of all kinds.

Have you ever thought how your window display would be much enhanced by the judicious use of attractive lights?

PAINT, OIL AND BRUSH TRADES

GETTING AWAY FROM CHEAP PAINT.

ONE favorable sympton in the paint trade of this country at the present time is the evident tendency to get away from the idea of cheapness in paints and materials and to look rather at quality first and cost second. The real economy in paint and varnish buying, as is becoming generally understood, lies in the use of the best materials for the purpose desired. That is not to say that cheaper materials may not often be "just as good," considering the use to which they are to be put; but generally speaking, there is no economy in paying high wages to a painter or finisher to apply inferior goods, no matter how cheap. The ratio of cost of labor to cost of material is now so high that economy does not lie in saving on the latter.

Of course there always will be a craze for cheapness among a certain class of paint and varnish users. They either do not understand the value of quality or else they wilfully ignore it for the purpose of cheapening their work, as is frequently the case in contracts. For such buyers there must always be a supply of second or third grade goods, which will be forthcoming so long as the demand exists. But we cannot believe that these people are in the mafority, or rather, that they represent the largest volume of purchases. They buy in small lots, as a rule, and are not in the same class with the larger and more discriminating purchasers who know the value of materials and seek the best.

Abroad, the situation is somewhat different. The complaint there is that the demand for so-called "cheap" paints is working disaster to the higher technical side of the paint making industry —in other words, is crushing out the man of skill and technical experience. The result is that many men of known talent in the chemistry of paint manufacture are seeking employment there in other lines. This is not wholly due to the cheap paint craze, though partially so, the other cause, in Great Britain, at least, being the decline in England's color industry. The curse of cheapness is there seen in its double effect on buyer and seller. The buyer suffers from inferior work and the seller from lack of incentive to make the best product possible. Thus the paint trade may be easily ruined by "cheap paints."

The varnish or paint manufacturer who desires to further the cause of good materials will find a fertile field for work among the architects who specify the goods to be used. The beginning of excellence usually is in the architect's specifications. If he is rightly informed as to the covering and wearing power of a varnish or paint, he will be able to specify understandingly, and the finished work will be evidence of the superiority of the goods. Fortunately, the largest users of paints in this country are mixing more and more brains with their paints; are employing expert chemists in many instances to study the subject of materials for all purposes, both from the theoretical and the practical standpoint, and this earnest effort to secure the best at the least cost is bringing forth fruit in a better general understanding of the entire paint and varnish question and a corresponding contempt for "cheap paints."—Paint, Oil & Drug Review.

ARTIFICIAL GRAPHITE.

THE International Acheson Graphite Co., of Niagara Falls, N.Y., with the recent completion of a large extension equipped with the most modern electrical and mechanical appliances and machinery, has doubled the capacity of its plant for creating graphite in the electric furnace, and has closed a contract with the Niagara Falls Power Co. for another 1,000 horse power of electrical energy in addition to the 1,000 horse power previously used. The commercial importance of this artificial graphite may be estimated from the fact that the United States Geological Report for 1904 states that for that year the value of Acheson Graphite produced was $217,790, while all the graphite mined in this country amounted merely to $241,372. New York State, which is considered rich in deposits, according to the official report of 1904 produced natural graphite worth $119,509. Acheson Graphite is largely used in the manufacture of metal protective paints, dry batteries, stove polish, packing and as a lubricant. The electrochemical processes also consume an extensive supply.

PAINT MANUFACTURER HONORED

One of the recipients of the birthday honors recently conferred by His Majesty, is Colonel H. M. Pellatt, Toronto, secretary of the Canada Paint Co., Limited, of Montreal, Toronto and Winnipeg. The Colonel is a progressive and energetic Canadian, and fully deserves his new title of Sir Henry M. Pellatt, K.B., A.D.C.

Imperial Turps.

We do not claim it is pure Southern Turpentine, but we do know it is safe to use, and does not contain any injurious properties. This is more than we would like to say about some of the so called PURE in the market at present.

Manufactured only by

PAINT AND OIL MARKETS

QUEBEC.

Office of HARDWARE AND METAL,
232 McGill street,
Montreal, November 17, 1905.

WHITE lead is being steadily forced upward. Old country quotations give price for dry white lead at corroding points, at £17 10s. This would make a lay down price, with winter freights, of between $4.75 and $5 per hundred pounds for the dry article. Based upon this calculation, it will be readily seen that prices for ground lead have been much too low. Therefore, the grinders have increased their figures about twenty-five cents per hundred pounds. There is no inclination to cut for quantities, and, in fact, stocks are almost bare.

There is no interruption to the general lively air of business which pervades the several factories and jobbing houses, and every effort is being made to clear the sheets as much as possible, before the winter really sets in.

Dry colors, bronzes, and painters' sundries all feel the healthy tone, and varnishes particularly, have been subject to a good movement.

Turpentine—Prices remain steady as follows: Single barrel, 98c. per gallon. Two barrels or over, 97c. For smaller quantities than gallons, 5c. extra per barrel is charged. Standard gallon is 8.40 lbs. f.o.b. point of shipment, net 30 days.

Linseed Oil—Conditions are practically the same as at our last report. There has been no change in price on the Montreal market. We quote as follows: Raw, one to four barrels, 45c.; five to nine barrels, 44c.; boiled, one to four barrels, 48c.; five to nine barrels, 47c., f.o.b. Montreal. Net 30 days.

Ground White Lead—As was noticed in our introductory remarks, an advance has taken place during the week. We are now quoting: Best brands Government standards, $5.65 to $5.80; No. 1, $5.40 to $5.55; No. 2, $5.05 to $5.30; No. 3, $4.80 to $5.05; all f.o.b. Montreal.

Dry White Lead—An advance of 15 cents all around has taken place in the dry article as well, and we are now quoting: Barrels, $5.40; 100 lb. packages, $5.65; 6 or 10 lb. tins, $6.65.

Dry White Zinc—In sympathy with persistent advances in the primary market, prices locally have risen. We quote: Pure dry in casks, 7 1-2c.; in 100 lb. kegs, 8c.; No. 1 zinc in casks, 6 1-2c.; in 100 lb. kegs, 7c.

White Zinc (ground in oil)—We are quoting a half-cent advance all around: 25 lb. irons, 8c. to 10 1-2; No. 1, 6 3-4c.; No. 2 5 3-4c.

Putty—We quote: Pure linseed oil, $1.75 to $1.85; bulk in barrels, $1.50; in 25-lb. irons, $1.80; in tins, $1.90; bladdered putty in barrels, $1.75.

Orange Mineral—Our prices are as follows: Casks, 7 1-4c.; 100 lb. kegs, 7 1-2c.; smaller quantities, 8 1-2c.

Red Lead—Further advances have taken place in the primary market, but local jobbers are still quoting as follows: Genuine red lead in casks $4.50; in 100-lb. kegs $4.75; in less quantities at the rate of $5.75 per 100 lbs.; No. 1 red lead, casks, $4.25; kegs, $4.75, and smaller quantities, $5.50.

Gum Shellac—We give prices: Fine orange, 55c. per lb.; med. orange, 50c. per lb.; bleached shellac (white), 60c. per lb.

Shellac Varnish—This line is in excellent demand at present. Our prices are considered the rock bottom quotations: Pure white in barrels, $2.50 to $2.60; pure orange, $2.40 to $2.50; No. 1 orange, $2.35 to $2.45.

Mixed Paints—We still quote from $1.20 to $1.40 per gallon.

Castor Oil—Large quantities are being sold, and the price has been advanced on import orders. The following prices, however, still hold good on orders from stock: from 7 1-2c. to 8 1-2c. according to lots.

Refined Petroleum—The demand is naturally active at this season, and large orders are the rule. We are quoting: American water white, 16 1-2c. and 17 1-2c.; Canadian prime white, 14 1-2c. and 15 1-2c.; 18 1-2c. and 19 1-2c. ex warehouse.

Window Glass—The demand for glass is tremendous. Contractors from all parts of the Province are crying for it, and will pay about any price for suitable sizes. The supply, however, is not equal to the demand, and many orders will be left unfilled throughout the winter. Some further arrivals are expected this week, but they can scarcely be expected to relieve the situation to any extent. In the meantime, prices given below are firmly held: First break, 50 ft., $2.10; second break, $2.20; first break, 100 feet, $4.25; third break, 100 feet, $4.75; fourth break, 100 feet, $5; fifth break, 100 feet, $5.25; sixth break, 100 feet, $5.75; seventh break, 100 feet, $6.25; eighth break, 100 feet, $6.50. Diamond star, first break, 50 feet, $2.30; second break, 50 feet, $2.50; first break, 100 feet, $4.40; second do., $4.80; third do., $5.75; fourth do., $6.50; fifth do., $7.50; sixth do., $8, and seventh do., $9. Double thick, first break, 50 feet, $3.45; second break, $3.75; first break, 100 feet, $6.75; second do., $7.25; third do., $8.75; fourth do., $10; fifth do., $11.50; sixth do., $12.50; seventh do., $14; eighth do.,

ONTARIO.

Office of HARDWARE AND METAL,
10 Front Street East,
Toronto November, 17, 1905.

WHITE lead has been advanced from $5.55 to $5.80 on the local market owing to a scarcity of supplies. The sales recently have been very large owing to the expected advance, and the present prices are likely to be held very firmly by the jobbers. Red lead and white zinc have not been advanced as yet, but the increase in prices in Montreal is likely to be followed by an advance here on these lines.

Linseed Oil and Turpentine remain at the prices quoted a week ago. Prices for oil have fluctuated in England, but are again quite strong. The scarcity of turpentine has allowed some jobbers to sell at higher than prices quoted, but $1 is still the ruling figure.

The season's business has been the largest on record and the certainty that prices of paints will advance greatly next year is causing many dealers to place orders for paints for immediate delivery at the low prices now quoted. This will cause a heavy business to be done during the remainder of the year, and as the stocks are now rather light in the different warehouses they are unlikely to have anything to carry over for the coming year.

White Lead—Ex Toronto, pure white, $5.80; No. 1, $5.37 1-2; No. 2, $5.00; No. 3, $4.25; No. 4, $4.50 in packages of 25 lbs. and upwards; 1-2c. per lb. extra will be charged for 12 12 lb. packages; genuine dry white lead, in casks, $5.25.

Red Lead—Genuine in casks of 560 lbs., $4.75, ditto, in kegs of 100 lbs., $5.00; No. 1, in casks of 500 lbs., $4.50; ditto, in kegs of 100 lbs., $4.75.

White Zinc—Genuine V. M., in casks, $6.50, in 25 lbs. $7.50, in 12 1-2 lbs. $8.00; Lehigh, in casks, $5.50, in 25 lbs. $6.00, in 12 1-2 lbs $6.50.

Shingle Stain—In 5-gallon lots 57 to 90c. per gallon.

Paris White—90c. to $1 per 100 lbs.

Whiting—60 to 65c. per 100 lbs.; Gilders' whiting, 75c.

Shellac Varnish — Pure orange in barrels, $2.80; white, $2.90 per barrel; No. 1 (orange), $2.25.

Linseed Oil—Our quotations are: Raw, 1 to 4 barrels, 47c. to 48c.; boiled, 50c. to 51c.; 5 to 9 barrels, raw, 46c. to 47c.; boiled, 49c. to 50c. Toronto, Hamilton, London and Guelph, net 30 days. Advance of 2c. for delivery to outside points.

Turpentine—Single barrel lots, $1; 5 gallon lots, $1.10 f.o.b. point of shipment, net thirty days. For less quantities than barrels. 5c. per gallon extra will be added, and for 5 gallon packages, 50c., and 10 gallon packages 80c. will be charged.

Glues—Broken sheet, in 200 lb. barrels, 5 to 25c. per lb.; cabinet glue, in barrels, 11 1-2 to 12c.; emery glue, in barrels, 15c.; bookbinders' ground, 11 1-2c.; finest American white, 19c.; No. 1 American white, 15c. per lb.

Putty—Ordinary, bladders in barrels. $1.65 to $1.75; pure linseed oil, $2 to $2.10; bulk in barrels, $1.50; pure, $1.95 to $2; 100-lb. kegs 25c extra.

Plaster Paris—New Brunswick, $2 per barrel.

Liquid Paints—Pure, $1.20 to $1.35 per gallon; No. 1, $1.10 per gallon.

Barn Paints—70c. to 80c.

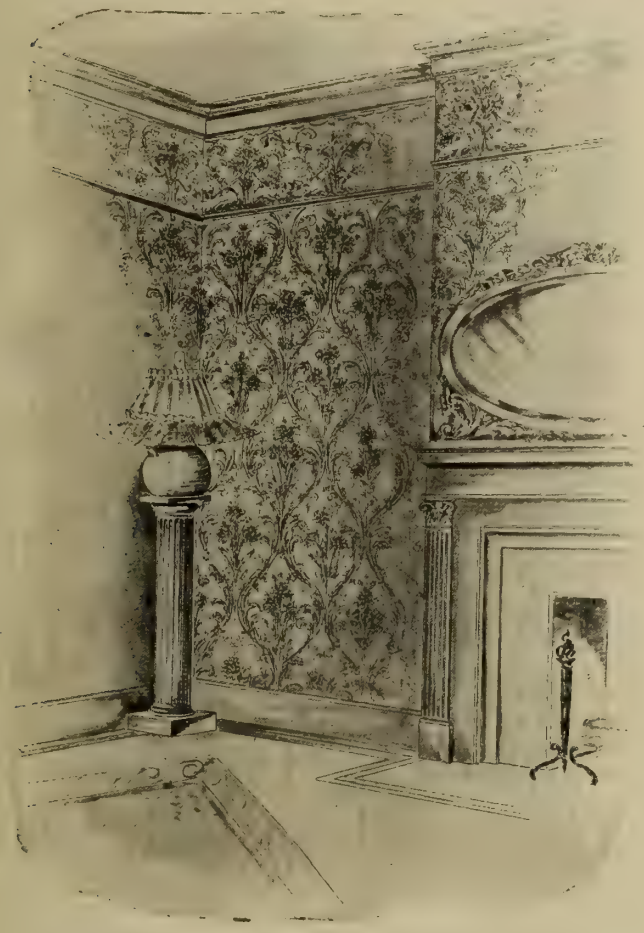
Bridge Paints—75c. to $1.

Castor Oil—English, in cases, 8 1-2 to 9c. per lb., and 10c. for single tins.

Refined Petroleum— Dealers in the back districts have been laying in their Winter supplies and shipments have been large. We quote: Canadian prime white, 14c.; water white, 16c.; American water white, 16c. to 18c. ex warehouse.

Crude Petroleum—Canadian crude has advanced 2c. Pennsylvania crude holds firm at the price listed. We quote: Canadian, $1.36; Pennsylvania, $1.61; Ohio, 94c.

VEHICLE FOR PAINT.



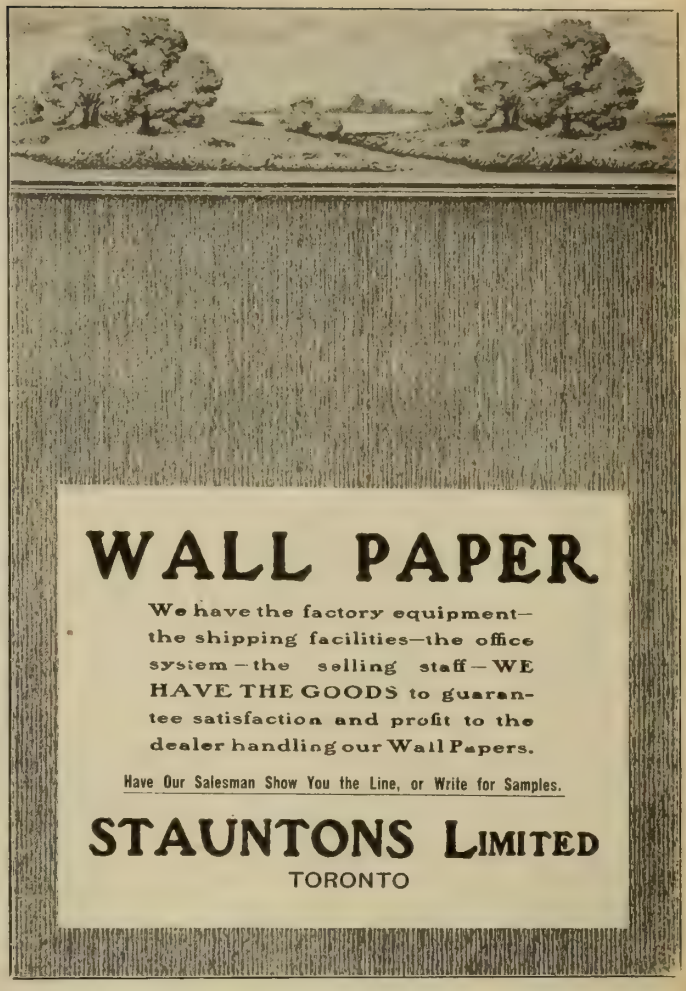
A. JUNKERS, Berlin, Germany, has secured a German patent for a vehicle, specially designed for mineral pigments, and making the paint weatherproof, easy working, and of increased covering power. The inventor mixes, say, 100 parts of potassium silicate (density, 15-22 deg. B.) with 0.7 part of finely divided sulphite cellulose. The cellulose facilities the uniform drying of the silicate and improves the covering power of the paint, the latter by distributing the particles of pigment more uniformly throughout the mass. The paints are ready for use as soon as mixed, and will remain in this condition for an unlimited time without any of the pigment settling down to the bottom. The vehicle can also be used as a topping for protecting coats of paint already applied.

BRITISH COLUMBIA TURPENTINE.

THE Monarch Wood Extraction Co. of Victoria, B. C., which controls the patents for the manufacture of turpentine from fir wood, recently made a twenty-four hours' run of its plant with gratifying results. There remains considerable to do in the way of adjusting the plant before the factory will be running commercially, however. The turpentine produced is said to be of the highest quality, several specimens having been put through the whole process. In addition to the turpentine a high quality of resin is obtained as well as less valuable oils and resins. The returns from the wood vary considerably. From fifteen gallons to thirty gallons of turpentine a cord have been obtained from some of the samples treated independent of the bye-products.

WALL PAPER

DEVELOPMENTS during recent years have been such that the utmost care must be taken in stocking wall paper in order that quality and pattern may be right. Wall paper manufacturing has made great strides in Canada of late. The way in which imported papers have been replaced by those of Canadian production is a proof of this. The designs for the Spring business are such as to insure a big business and it is well



Illustrating Drawing Room and Parlor Design No. 1667.
This elegant decoration is manufactured by Stauntons Limited, Toronto.

for merchants to make their selections at once in order that they may not be found unprepared when the season opens. Although the leading mills have increased their facilities for turning out paper during the Summer, yet the anticipated sale of well paper next Spring will keep them running to their full capacity and early orders are essential for early delivery.

The bulk of the retail Spring business is done in a very short time. The period at which it is done, too, varies greatly according to the forwardness or the reverse of the season. For these reasons it is absolutely necessary for the success of the department that supplies should be on hand in good time. A display must be made the very first day of the season, and the merchant who has not got his stock at that time will be out of the running.

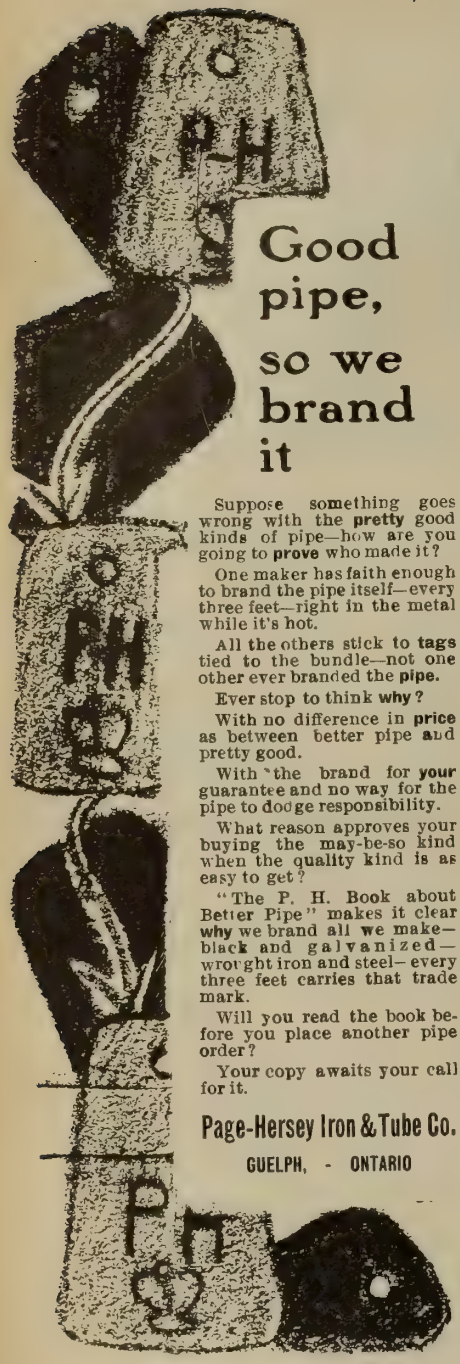
Orders are reported by all manufacturers to be coming in satisfactorily. The lines which were submitted in

the samples have met with great favor and the previous expectations of the manufacturers have been exceeded by the actual results. Favor is divided, too, and there will be no lack of variety in next year's offerings. This is a desirable feature, for while it makes the manufacturers spread their efforts over a wider field, yet the variety is conducive to greater retail sales.

COLOR SCIENCE.

CHILDREN under seven years of age almost invariably prefer yellow to all other colors, it is said.

Women, according to M. de Cnadolle, are more apt to have brown eyes than any other color, the proportion of that hue being 35 per cent.



Colors passing through a prism can be made to produce sounds. Green and red lights produce the loudest noises and blue and yellow the faintest.

It is said that dew will not form on some colors. While a yellow board will be covered with dew, a red or black one beside it will be perfectly dry.

Careful experimenting has shown that through a certain depth of water, where only 50 per cent. of the red rays passed through, there were 60 per cent. of orange; yellow, 80; green, 90; indigo, 95.

A writer in Science says that in ordinary cases of partial color-blindness the color sensations that remain are blue and yellow, not blue and red or blue and green, as is generally assumed and stated in text-books.

There has been lately found on the Isthmus of Tehauntepec a flower which roughly does the work of a clock. In the morning it is white, at noon red and at night blue, the changes of color being remarkably regular.

INDUSTRIAL GOSSIP

HARDWARE AND METAL would be pleased to receive from any authoritative source industrial news of any sort, the formation or incorporation of companies, establishment or enlargement of mills, factories, foundries or other works, railway or mining news. All correspondence will be treated as confidential when desired.

THE J. Y. Griffin Co., of Winnipeg, have secured a site in Fort William on which they will erect a large plant to carry on their business similar to that in Winnipeg.

The Empire Lumber Co. will erect a large saw mill at Latchford, Ont.

A new hotel is being erected by Messrs. Dean and Mortlach, Sask.

The Whyte Packing Co., Stratford, are building an addition to their works at that place.

The Canadian General Electric Co. and the Canada Foundry Co. will erect a warehouse 140 x 40 feet in Winnipeg.

Prospectors report the discovery of indications of iron ore in Nipegon district, New Ontario, over an area covering 50 miles.

The Vancouver Nail Works were recently destroyed by fire at a loss of $50,000. The building and plant were partly insured.

Welsh coal exporters are looking for new markets and are anxious to give eastern Canada a fair trial with their best grades of anthracite.

The L. H. Packard Co., Montreal, will erect a handsome $40,000 factory on St. Antoine Street. It will be a five-storey building, brick and stone.

It is announced that the Brantford Street Railway will change hands this week. The purchasers are unknown. Big improvements and extensions are contemplated.

The output of the Dominion Coal Company's mines for October was 333,317 tons, and shipments amounted to 323,887 tons. This creates a new high record for the company.

The Dominion Bridge Co., owing to the volume of business done in the West and the extensive railway construction sure to take place, have decided to establish a plant and yards at Winnipeg.

The owners of the Sullivan mine in Kootenay, B.C., are considering the proposition of enlarging the smelter to a capacity which will enable it to treat not only all the company's ore, but also that of other mines in the same district.

The Catholic School Commission, Montreal, will erect a new brick school house at 219 Fulham Street to cost $40,000, and the Quebec Bank will also build a new bank on the corner of Amherst and St. Catherine Streets to cost $26,000.

A Detroit company intend to erect a smelter at Argentine near Haileybury. This smelter will be in running order by Christmas, and will handle all ore worth from $25 up. This company, it is stated, intended originally to erect a smelter at North Bay, but have been induced to locate at Haileybury.

Negotiations have been begun to establish a new industry at Kingston, Ont., for the manufacture of lap-welded iron and steel tubes for marine, stationary and tubular boilers, also wrought iron pipe for gas, steam and water. It is understood that an attempt is being made to interest Kingston capital in the venture.

Records were broken in the output of the Dominion Steel Company's open hearth furnaces and blooming mills last month. The open hearth shows a tonnage of 18,915, an increase of 3,837 over any other month in the company's history while the blooming mills produced 15,262 tons, exceeding the output of any previous month by 1,246.

The B. C. Electric Company at Victoria are making arrangements to build a new office building of brick two storeys high. The first floor will be used by the company and the second floor will be rented for offices. The company are also contemplating the exploitation for gas, which will be supplied for domestic and other purposes.

The Brandon School Board have decided to submit to the municipal electors in December, a by-law for the purpose of borrowing $52,000, which will be used as follows:—Collegiate building, $30,000; four roomed school, $9,000; repairs to the central school, $5,000; to pay off the balance on the Park school, and to pay for lots secured, $5,000.

A fly-wheel, eighteen feet in diameter and weighing thirty-five tons, has been installed in the power house of the St. John Railway Company by the Canadian General Electric Co. This wheel is an important part of what is known as a direct alternating electric light unit, 600 killowatt, and is connected with an engine of 1,200 h.p., cross compound, manufactured by the Laurie Engineering Co., of Montreal.

The Granby Copper Company have called a special shareholders' meeting for December 1st to authorize an application to the Legislature of British Columbia, under whose laws the company is incorporated, for permission to increase the par value of each share, from $10 to $100. The total capital will remain unchanged, so that the number of shares will need to be cut down to one-tenth their present number. The meeting will also authorize an increase in the number of directors from 12 to 15, and will make changes in details of the by-laws.

Mackenzie & Mann are negotiating

for the Moose Mountain iron ore deposits and will exploit them actively. A railway has been commenced from the village of Killarney on the north shore of Georgian Bay to these ore fields a distance of about 70 miles. Ore-shipping piers are to be erected on the bay, and the distance from these piers to lower lake ore-receiving ports will be less than from any of the upper lake shipping ports on the American side of the lakes. Besides Mackenzie & Mann the chief owners are, Joseph Sellwood, Duluth; J. T. Gates, J. L. Lambert and J. T. Mitchell, of Chicago, and Blair and Company of New York.

The by-law granting a loan of $12,000 to the Jackson Wagon Works Co., St. George, was carried by a majority of 839 in the town of Galt as an inducement to have that company locate there.

Companies Incorporated.

Calder Grain Shocker Co., Hamilton, share capital $30,000, purpose to manufacture grain shockers. The directors are:—J. Calder, G. S. Bingham, J. J. Morton and H. Rader, all of Hamilton, and A. R. Wardell, of Dundas.

Clinton Threshing Co., Clinton, share capital $50,000, purpose to manufacture threshing machines, engines and other machinery. The directors are:—D. A. Forrester, Goderich, and W. W. Farran, W. Jackson, W. Gunn and C. Hovey, all of Clinton.

Adjustable Axle Nut Co., London, share capital $30,000, purpose to manufacture and sell the Williams Adjustable sleeve axle nut. The directors are:—R. C. Williams, John Sussex, and A. Simpson, all of London; and W. T. Pridham and W. E. Davis, of Toronto.

Banwell-Hoxie Wire Fence Co., Hamilton, share capital $100,000, purpose to manufacture and sell woven wire and other fencing. The directors are: Henry Banwell, Walkerville; and Elizabeth Brett, Agnes Waldie MacGregor and James Edward Banwell, all of Windsor.

St. Catharines Building & Paving Co., St. Catharines, share capital $50,000, purpose to manufacture products of cement, etc. The directors are:—J. T. Petrie, F. A. Henry and A. W. Marquis, all of St. Catharines, and C. E. Secord, township of Grantham, and W. H. Swayze, township of Louth.

Canadian District Heating Co., Hamilton, share capital $250,000, purpose to produce natural gas, electricity, steam, and hot water for lighting and heating purposes. The directors are:—W. W. Stewart, W. J. Clark, R. B. Griffith and W. P. Witton, all of Hamilton, and J. H. Williamson, of Toronto.

Ontario Minnesota Mining Co., Port Arthur, share capital $60,000, purpose to carry on the operations of a mining, milling reduction and development company. The directors are:—J. D. Ensign, G. A. Elder and V. Stearns, Duluth, Minn.; W. W. Blackshaw, West Superior, Wis.; and G. F. Piper, of Minneapolis, Minn.

No. 30. OSHAWA, ONT. Nov. 18, 1905

ARE YOU

We have been telling you about **Perfect Metal Lath** — how well it works, how well it sells. No doubt, by this time, you have written to one of our offices and received full particulars. If you haven't done this, you can write now and secure the necessary information. **10,000 sq. yds. daily—remember that is what we are able to turn out, and it sells at 10c. per sq. yd.**

EQUIPPED WITH

Our latest manufactures are our **Fireproof Partition Stud** and **Sheet Steel Furring Strip,** two lines that we are offering at a fair price, and two lines which, owing to advances in the cost of lumber and fire insurance, are being received with open arms by builders. It it needless to say that the demand will continue to be heavy. The nearest Pedlar warehouse will be glad to quote you prices.

PEDLAR GOODS ?

Of course, we continue to manufacture **everything** required in the way of **Roofing, Siding, Covering, Ceiling,** etc. You have heard of our **700NA Brick Siding,** our **709NA** and **709NB Stone Siding,** our **710 Rock-Faced Stone Siding.** You have heard of the **Oshawa Shingle,** the best metal shingle made. You have seen some of our **Zinc** and **Copper Enrichments** and know how artistic they are. Every Hardwareman in the country ought to be selling Pedlar goods. The Hardwaremen who don't sell them **work in the interests** of the Hardwaremen who do. Which side are you going to be on ?

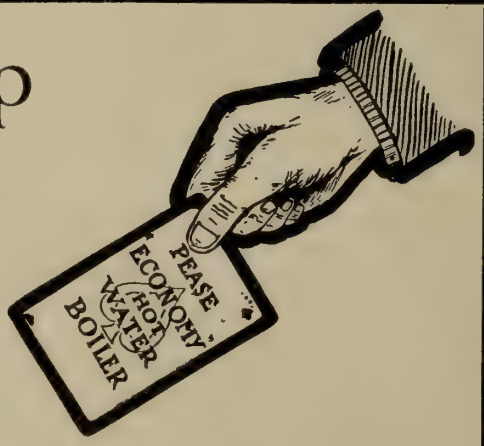
Many Reasons

Why Sales of Our Horse Shoes Exceed all Other Brands Combined.

Material possesses the qualities which enable it to withstand severe wear, and at the same time it has the ductility necessary to ensure ease of working and proper welding.

Shape designed to give the Blacksmith the least possible amount of fitting—correctly proportioned—crease placed and made so as to give proper setting to nail.

Finish of our shoes stamps them at once as a high-grade product—culling in very close and every shoe in each keg is a perfect one.



To sum up

"M. R. M." Horse Shoes

embody "more quality" than any other shoe on the market and the increasing sales is strong evidence that our claims are justified.

THE MONTREAL ROLLING MILLS CO.

Our Trump Card

Our trump card is the "Pease Economy Hot Water Boiler."

It is the article that completed the triumph for the "Pease Heating System"—that put the skybosh on the sploger, so to speak.

We have increased our facilities for manufacturing by the addition of another foundry, so we can fill orders now the same day as received.

Spread the glad news, please! and send in your order to-day.

BUILDING AND CONSTRUCTION

HOMES OF THE FUTURE.

AT a meeting of the Nomad Club, in Montreal, recently, an interesting and novel paper was read by Mr. Roswell C. Fisher, owner and builder of "The Sherbrooke," and other apartment houses in the city, on the above subject.

Mr. Fisher began be defining the word "home," and expressing the opinion that every man ought to have a home, even if it was only one room. Broadly speaking, his definition of a home is any place where the occupant, man, woman, or husband, wife and family, affixed their individuality on the surroundings, and made it theirs for the time being. To begin with, then, it was obvious that a dwelling of some kind, if but a single room, was a requisite. Another essential was privacy, which proved that a hotel could not be a real home.

The speaker then sketched the evolution of the home, and how, from a separate building, detached, with grounds, it had now become, for the most part, a separate building attached to another building, due to the modern condition of life, which was squeezing people together. The frontage of houses was getting narrower, and, at the same time, deeper, which produced the horizontal home or flat.

This had finally developed into the apartment house, which Mr. Fisher contended was a real home. He combatted many prejudices against such a building such as that it lowered the family tone, that it was a place of awful bachelors and no place for children, who had to play in the corridors. As a matter of fact, there was no necessity for children playing in the corridors, as they had their own corridors in their suite of rooms. Such a house, the speaker contended, solved the cooking and servant question, as well as the many little family jars as to meals.

Among the advantages of the modern apartment house, Mr. Fisher cited the facts that it furnished privacy, permanency, and an opportunity for individualizing the home. Its smallest unit was a sitting, sleeping and bath room, which unit might be extended to twenty or more rooms, with a chef and assistants to cook for those that wanted it.

This was the house of the present—the result of modern conditions—and Mr. Fisher believed that the home of the future would be simply a development of the apartment house. To make it more comfortable, Mr. Fisher suggested to add to it the club, where those who saw no harm in cards and billiards could enjoy themselves without traveling blocks away, which, in a climate like ours, was often a matter of inconvenience. In such a house there would be a ball room, a room for private theatricals, a gymnasium, a hospital service, and, in fact, a club where the best society of men and women could live and have their homes. With reference to cost, Mr. Fisher quoted figures to show that it would be less than was now being paid for the same accommodation.

CEMENT BRICKS.

THE extraordinary growth of the cement building block industry during the past three years has developed almost the united opposition of the brick industry. The brick manufacturer and bricklayers' unions, in large cities, have influenced legislation against the hollow concrete block, requiring a 16-inch wall for the block, where a 12-inch brick wall will pass inspection. The entire adverse legislation being founded upon political pull. In short, graft ordinances, under which a brick having a compressive resistance to fracture of from 363 pounds down to 90 pounds per square inch will be received, while a cement block mixed one cement to four and one-half sand and gravel will develop a resistance of 2,750 pounds per square inch in 30 days and 3,750 pounds per square inch in one year. Yet the concrete block wall must be laid four inches wider than the brick wall. This simply shows how common sense can be overriden by political pull, and the substantial interests of entire communities subordinated to the selfish personal interests of a particular set of men, such as the clay brick manufacturers and bricklayers' unions. In order to overcome these graft ordinances we are in favor of the use of cement brick in large cities, where millions of them can be marketed; these brick can be made at a lower cost than burned clay brick. Pressed cement brick of a high grade, which bring $18 per thousand, are now in the Chicago market. They sell readily and are preferred to the clay brick. One cement brick mixed 1 to 15 and compressed on very heavy machines are finding a good market at $15 per thousand. Strange to say the bricklayers' unions do not object to laying these or other cement brick; they handle them as readily as they do the burned brick. When people become familiar with cement brick it will follow as a matter of course that the cement building block will be received with equal favor by reason of the greater economy in the use of the hollow concrete block. Therefore, do not give up the block; investigate cement brick machinery and take up the cement brick as a side line. It will pay. They can be used for partition walls. Cinders being used instead of sand and gravel. In Germany a great industry has been built up in a cheap brick known as Schwammstein brick, made of a porous volcanic rock and hydraulic cement. They are used for partition walls, being light and not over strong, yet answer every purpose for partitions in the best dwellings. One-storey cottages are built of this brick. They are very porous and need the protection of overhanging roofs, unless plastered with Portland cement mortar.—American exchange.

BUILDING NOTES.

The Waterous Co., Brantford, are to build an $8,000 addition to their factory.

Dundas Council have decided to install a filtering plant and make improvements to the reservoir.

The Northern Electric Mfg. Co. will erect a factory to cost $115,000 at the corner of William and King streets, Montreal.

Tenders are being advertised for by Parr & Fee for the erection of a brick warehouse for S. McConnell & Co., Vancouver.

The Granby Curling Club, Granby, Que., are erecting a new rink 152 feet by 36 feet, the whole to be covered with corrugated iron.

The foundry of the Canadian Aluminum Works, at Chambly Canton, Que., is being recovered with Pedlar's Perfect Rubber Roofing.

The Dickson Co., Peterboro, will erect a large planing mill at that place for the manufacture of sash, doors, blinds, interior fittings.

The Canadian Bank of Commerce have purchased a site in the centre of the business district of Halifax for $60,000, and will erect a modern bank building.

The New Liskeard Athletic Association are building a covered skating rink at New Liskeard, to be 70 feet by 165 feet. They expect to have it ready by Christmas.

W. Percy Gillespie, Regina, has purchased the property opposite the Alexandra Hotel, for which he paid $8,000. He intends building a large block on this property.

The Government will erect a new post office building at Edmonton as soon as a site can be selected. The city will secure the site leaving the Government to erect the building.

The three Masonic lodges of Vancouver have purchased a site for a new Masonic Temple on the corner of Georgia and Seymour streets. It is said the price paid for this property was somewhere in the neighborhood of $10,000.

A syndicate has purchased the Hamilton & Scott store, and the Adcock mill buildings, St. Thomas, for $16,000. Mr. Adcock will erect a new mill on the corner of Southwick street and the M.C.R. tracks. There is also talk of a new hotel being erected next Spring on the Ellison lot.

Permits have been granted in Hamilton for the following buildings: Gleadon & Fisher, four brick houses, $4,800; Fanning & Fogwell, six brick houses, $10,000; John Cline, brick house, $1,200; George Clapham, brick house, $1,200; Federal Life Building, $300,000; D. Henry, two brick houses, $4,800.

The building permits issued in Toronto during the first eight days of November represent an estimated expenditure of $139,315. The greater portion of the permits are for the better class of brick houses, of which 37 are projected at a cost of $99,150. There are also permits for 15 roughcast and frame houses, costing $21,450, and the balance is made up of alterations to brick buildings, $12,515; brick store on Dundas street, $1,100, and three stables to cost $9,000.

"DOMINION BRAND" ROOFING MATERIALS ARE

THE BEST FOR YOU

DOMINION BRAND

TARRED FELT

BECAUSE they are the most durable and in every way the most satisfactory.

CHURCH'S ALABASTINE—The Permanent and Sanitary

WALL-COATING

On the Canadian market more than twenty years—Company incorporated in 1885.

ALABASTINE is recommended by all who sell or use it and endorsed by leading sanitarians for the walls of **any building**, and especially for bed-rooms, living rooms, sick rooms, hospitals, etc. It is fire-proof and very desirable for the interior of factories, and as a primer for exterior painting, **especially on old weather-beaten buildings**.

ALABASTINE is systematically and persistently advertised, and sells on its **own merits**. Money invested in Church's Cold Water **ALABASTINE** returns again with the addition of a good profit; customers are satisfied and there is no risk of accumulating stock that won't sell.

See that stock is complete in all colors. Short any one shade might mean loss of sale and possible loss of customer.
Order this fall. Spring dating. "Do it now" from jobber, or direct from The Old Reliable

ALABASTINE CO., Limited, - - - Paris, Ont.

Daylight and How It Is Diffused Through Dark Places

IT'S AN OLD QUESTION WITH A NEW REMEDY—DARK BUILDINGS MADE LIGHT BY

MAXIMUM LIGHT GLASS

No doubt you have read much literature on many "prisms" but passed them all by. MAXIMUM LIGHT GLASS is worth consideration, because it is a daylight-increasing system that has proven successful on all occasions, and because it is **the only system** that **has proven** successful on all occasions. MAXIMUM LIGHT GLASS is a combination of Lenses and Prisms, but a **particular** combination. That is why it won The John Scott Legacy Medal of Edinburgh. That is why it was able to gather daylight passing down a light shaft 105 feet high, in a London building, and diffuse it through a room 40 feet long—a uniform "white" light, too, not the "patch" light of other systems. No builder looking for a remedy to darkness is likely to pass by MAXIMUM LIGHT GLASS. But how are builders to know that this glass performs successfully? Where are they to see it for sale? That is what each dealer must answer for himself. The mere sending of a post card to us secures samples of the glass for you; also our Booklet.

PLUMBING AND STEAMFITTING

PLAIN TALKS ON PLUMBING, HEATING AND VENTILATION

A Series of Practical Articles Written in Plain Terms, Devoid of Technical Phrases, Algebraical Signs, etc., so as to be Easily Understood by all Interested in these Subjects.

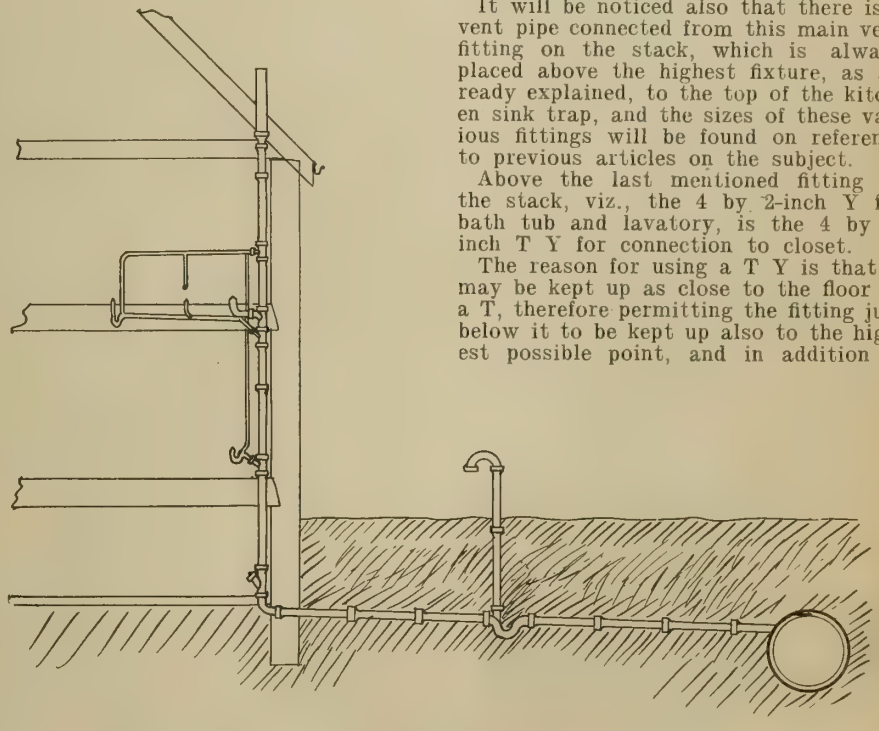
By M. J. Quinn, Mechanical Superintendent for the Ontario Government.
[Registered in accordance with the Copyright Act]

Article XX.

CONSTRUCTING A PLUMBING SYSTEM.

WHILE it would be a useful thing, no doubt, to go fully into the details of several complete plumbing systems, large and small, showing both plans and elevations of different sections of each plant, thereby indicating to the reader how the object sought may be attained in a variety of ways and in that way helping him, perhaps, to surmount difficulties which from time to time present themselves, and while we may touch upon different phases of the subject again, we must, on this occasion, confine ourselves to a description of the system shown in the accompanying cut, which, after all, embodies all of the essential features contained in any system of plumbing, no matter how extensive it may be.

In the matter of installing a plumbing system in any kind of building the two chief points to be kept in view are, first, that the fixtures, piping, etc., shall be so constructed that the sewage may pass away to the sewer with a minimum of friction and with the least possible chance of choking, and, secondly, that by no possible combination of circumstances may the deadly sewer gas be permitted to escape from any part of the system into the air in the house.



Now, starting off with these two ideas in our mind we will begin the construction of a little system which includes a sink in the kitchen and a closet, bath and basin up-stairs.

In such a system we would of course have a four-inch soil pipe which may be medium in weight but not under any circumstances light, because of the danger of having sand holes or cracks which may not develop for some time, and all soil pipe and fittings should be coated with linseed oil inside and out (this is usually done by the manufacturers) but not coated with pitch as was formerly the custom, because the latter material is likely to cover defects which often prove dangerous after the plant has been some time in use.

Starting from the bottom of the soil pipe stack, we see that it is turned out through the basement wall for a distance of three or four feet before it enters the tile pipe drain, and the chief reason why iron should be used through the wall in preference to tile is that in case of settlement of the wall the latter is very likely to be broken and the sewage allowed to run back under the basement floor, while there is little danger from this source where iron is used, and in addition it is a distinct advantage to have nothing but iron pipe inside the building because of the reduced liability of the escape of either sewage or sewer gas.

Inside the wall will be noticed a 4 by 4-inch Y, into the side of which is placed a 4-inch "clean-out," the cover of which may be removed for the purpose of removing any obstruction in the drain.

In the opinion of the writer the best clean-out fittings are those made of cast iron with the cover bolted on, because

not only is the seal more easily made with the soft rubber washer supplied with this class of clean-out than is the case with the brass fitting with the cap screwed into an internal thread, but unlike the latter, the former are not pressed out of a true circle by the uneven pressure of the lead, which is caulked between them and the soil pipe fitting in which they are placed.

Passing up from the basement to the kitchen we come next to the fitting placed in the stack to receive the waste from the kitchen sink, which if pretty close to the floor will be a 4 by 2-inch Y, or if it be a little higher up where the opening into the stack will be about on the level with the bottom of the trap, about as shown, and what is no doubt the best arrangement, then a 4 by 2-inch half Y is used, with a $\frac{1}{4}$ S trap.

If, however, there is any special reason for keeping the opening into the stack at the highest possible point, then a 4 by 2-inch T Y and a P trap are the proper kind of fittings to use.

The next fitting on the stack as we move upward toward the roof is a 4 by 2-inch Y from the side of which is taken a branch for the waste from the bath and lavatory respectively.

On the end of this branch is shown a trap which will be connected with the bath tub, the said trap having a vent or "break-syphon" connected back to the main stack, as explained in a previous article, and between the said trap and the stack is left a branch for the lavatory trap which will be placed above the floor, and also a branch from the vent pipe to connect to said trap.

It will be noticed also that there is a vent pipe connected from this main vent fitting on the stack, which is always placed above the highest fixture, as already explained, to the top of the kitchen sink trap, and the sizes of these various fittings will be found on reference to previous articles on the subject.

Above the last mentioned fitting on the stack, viz., the 4 by 2-inch Y for bath tub and lavatory, is the 4 by 2-inch T Y for connection to closet.

The reason for using a T Y is that it may be kept up as close to the floor as a T, therefore permitting the fitting just below it to be kept up also to the highest possible point, and in addition a T Y has an opening on the side at right angles to the run of the fitting, and at the same time enters the stack with a graceful curve, providing a minimum of friction and liability to choke.

Where a closet is connected to the stack as described, assuming, of course, that the closet is of the modern "syphon" variety, there will be no necessity for a break-syphon, as the air will be drawn down the stack and will be equally as effective as if a break-syphon were connected to the lead bend under the closet where such a connection is always placed in the case of syphon closets.

In case the older style wash-out closet is used, however, a break-syphon must be connected to the horn on the top of

the trap of the closet, provided for the purpose, and to the main vent just before it enters the stack.

Above the break-syphon connection to the stack the next fitting, which is just under the roof, is a 4 by 5-inch increaser, and from that point upward to the proper height, which when not near attic windows need not exceed eighteen inches, the stack should be five inches in diameter, instead of four inches, as it is from the increaser down to the first joint outside the basement wall.

The reason for increasing the size of the stack to five inches at under side of the roof is that during very cold weather the internal surface of the pipe where it is exposed above the roof becomes coated with hoar frost, and four inch pipes frequently become choked up solidly, thereby allowing the traps on the system to be syphoned for want of air.

In most places a trap must be placed on the drain between the house and the main sewer, and where this is the case a "foot" vent is placed on the house side of the trap and run up above the probable snow level, and on the top of this is placed a regular cap made for the purpose, or a return bend as shown, and as the stack inside the house is usually warm a draft is created within it which constantly draws fresh air down through the foot vent and through the drain and stack, so that any gases generated are quickly passed out above the roof.

AMERICAN SCHOOLS AND HEALTH LAWS

By J. D. Sutcliffe of the British Institution of Mechanical Engineers.

A SEVEN weeks' tour examining the schools of the Eastern and Central States of America raises at once a comparison with the schools visited when the writer was last in the States fourteen years ago. The progress in the provision for the health of the school children has been most marked and every care is now taken that the heating, ventilation, sanitation and fire appliances are of the most perfect description.

In 1891, when five weeks were spent by the writer in examining the schools in the Eastern States from an engineering point of view, the majority were warmed by hot air furnaces fixed in the basement on what was known as the "Smead System." This system has now been almost entirely superseded by steam and hot water heating combined with fan ventilation, but great credit is due to Mr. Smead for the educational and pioneer work done between 1885 and 1895, in raising the standard of comfort and health in American schools. No other man has done so much for the children, and in 1891 his system was in use in probably 90 per cent. of the schools in the Eastern States. It was never considered suitable for the English climate, as the air was passed over the outside of a furnace which warmed it to the required temperature, and English engineers considered such air too dry and too liable to have the nature burned out of it. America has evidently come to the same conclusion, and it is seldom one sees the furnace system except in the smallest village schools.

Statutory Regulations.

The State of Massachusetts was the first to draft rules and regulations for the building of schools, and even in 1891 there were most stringent regulations regarding the heating, ventilation and sanitation of school buildings. The following extracts from their by-laws show this :

"1. The apparatus, with proper management, is to heat all the rooms, including the corridors, to 70 deg. Fahr. in any weather.

"2. With the rooms at 70 deg. Fahr. and a difference of no less than 40 deg. Fahr. between the temperature of the outside air and that of the air entering the room at the warm air inlet, the apparatus is to supply at least 30 cubic feet of air per minute for each scholar accommodated.

"3. Such supply of air is to so circulate in the rooms that no uncomfortable draught will be felt, and the difference in temperature between any two points on the breating plane in the occupied portion of a room is not to exceed 3 deg. Fahr."

It will be noticed that the temperature is to be maintained "at 70 deg. Fahr. in any weather." This is very stringent, and in the opinion of most English engineers is far too high. It must not be forgotten, however, that the percentage of humidity in the air is small compared with this country, and most people find that 70 deg. is not more comfortable in America than 60 deg. in England. The question of relative humidity is an important one in fixing the most comfortable temperature, and whereas records kept in American schools last Winter show an average humidity of only 26 per cent. the humidity observations taken in the writer's office were never lower than 65 per cent., and the average for the Winter months would be about 72 per cent.

A Typical Chicago School.

The Chicago schools were not examined on the previous visit in 1891, as it was understood the school buildings were far behind those of the Eastern States. This has now all been altered, and Chicago is paying great attention to the equipment of all schools built within its area. On an average twenty-five new twelve-roomed schools are built each year, and the Chicago Board of Education employ their own architect for these. In addition, they have appointed a special expert in heating, ventilation and sanitation, Mr. T. G. Waters, who has charge of this portion of the work and designs all the necessary equipment. He aims at, and secures, a very high standard of efficiency, and the following description of one of the most recent schools shows the amount of care taken to provide fresh air and comfortable working conditions for the children. The school selected is a three-storey building, 174 feet by 124 feet in plan with twenty-seven rooms in addition to the rooms in the basement. It was designed by the architect to the Board of Education, Mr. W. B. Mundie, and erected under his supervision. The heating and ventilation and all matters pertaining to plumbing, gas fitting and sewage, were designed and installed under the direction of Mr. Waters. The three floors are practically identical; there is a longitudinal central corridor with the rooms at either side and a stairway at each end; the classrooms, eight per floor, are practically all of the same size, 27 feet by 32 feet, and each classroom has a spacious wardrobe, through which the group of flues in connection with the heating and ventilation rise for the rooms of that tier. Above the stairway of the main entrance, situated in what is really a mezzanine storey, is the office of the principal, and over this, in the second storey, is a library. The three central rooms of this part of the third storey, it may be added, are formed by sliding blackboard partitions which, when rolled away, form an assembly room with a permanent stage on the opposite side of the corridor.

Air is distributed throughout the building on the plenum system. It is received by a double outlet fan in the centre of basement, and discharged in opposite directions through both tempering and heating coils located immediately beyond; and the individual room supplies are carried from the warm air plenum chamber to the various groups of flues. The fan is run at a speed of 150 revolutions per minute, belt driven from a 9 ft. by 14 ft. steam engine, and has a capacity under as assumed air pressure of ¾ oz. of about 25,000 cubic feet from each outlet per minute. Each outlet is provided, however, with a plate so that any desired quantity of the delivery up to 50 per cent. may be cut off. The air is carried from the plenum chamber through the small blast ducts to vertical flues and thence to the room inlets, each room supply being independent. The air is delivered about six feet above the floor level, but the area of the opening is such that a considerable reduction of the velocity of the incoming air is effected. Among the requirements of the apparatus it is specified that the supply should amount to 1,800 cubic feet of air per hour per pupil, assuming an avergge occupancy of fifty-four pupils per room. The escape of air from the rooms is in general through side registers at the floor line in the wardrobes, this method providing for warming these rooms as well. The exhaust system is designed to provide for the discharge of about 75 per cent. of the inflow from the fan into the building, the rest of the air escaping through the numerous inevitable points of egress possessed by every building besides the open doors. There are two boilers of the horizontal tubular type, 60 in. in diameter and 18 ft. long, containing forty-eight 4 in. tubes, and a pressure of 45 lbs. is carried.

The exact cost of this building could not be learned, but a similar new school which is just being completed is expected to cost $145,000, of which $12,000 is allowed for the warming and ventilating plant.

Steam-Heated and Furnace-Heated Schools Compared.

Mr. Waters also gave the writer figures relating to two eight-roomed schools, each accommodating three hun-

dred and twenty scholars, and which were erected in 1894. One of these was heated by steam heating apparatus and mechanically ventilated by means of fans. The other was heated by warm air from furnaces and ventilated by natural means only. The warming and ventilating plant in the first school originally cost $5,000, and in the furnace-heated school $3,200. The total cost of the bituminous coal used in the steam plant (price 10s. per ton) amounted to $450 per year, whilst anthracite had to be burned in the furnace plant, costing $6.50 per ton, and the average cost of fuel was $1,000 per year. The steam-heated building was also less costly to maintain, the repairs to the plant from 1894 to date amounting to only $85, whilst $450 had been spent in the same time on the furnace heaters.

The Board of Education of the city of Chicago has not installed furnace heaters in any first-class school building for the past sixteen years, except the one referred to previously, and this is in addition to an existing building which was heated by furnaces and the character of which was such that the introduction of modern steam heating and ventilating plant to heat both buildings was not permissible.

Although one must admire the thoroughness with which the whole subject of heating, ventilation, and sanitation has been studied, and the results obtained, one cannot altogether agree with the methods that are most in favor. As an example, all the heating surface is placed at one point in the basement. Now they frequently get temperatures of 40 degs. to 45 degs. Fahr. below freezing, and this means that the hot air has to be delivered into the rooms at a temperature of from 150 degs. Fahr. to 170 degs. Fahr. in order to maintain an average temperature of 70 degrees throughout. It cannot be considered good practice, and doubtless in time the methods will be modified to avoid such high initial temperatures.

New York Schools.

Turning now to the city of New York, similar stringent rules affecting the comfort, health, and safety of school buildings are in force. The city has its own board of education, and this board has its own architect. It also appoints a chief engineer, who is a trained man and designs all the heating, ventilating, sanitary, and fire-prevention appliances, and sees to their proper application. The architect's department, under Mr. C. B. J. Snyder, is now spending over a million and a quarter pounds sterling each year in building new schools and in bringing the older schools up to a reasonable degree of effectiveness for their work.

The writer had the pleasure of inspecting the "New High School of Commerce," and there is certainly no school in England, excepting perhaps the Manchester School of Technology, that can compare with it either in beauty of design or in wealth of equipment for the purpose intended. The building is five storeys high with basement, and has a frontage of 150 feet on Sixty-fifth street and 100 feet on Sixtv-sixth street, and will accommodate 1,630 students. The contract price for the school was $302,500, but it has cost with additions over $350,000. Practically it serves the same purpose as the Manchester Whitworth street Secondary School, but there the comparison ends. The basement contains a fine restaurant where food is supplied at cost price, a swimming bath 50 feet by 30 feet, a fine gymnasium with a gallery round asphalted and banked to serve as a running track, besides the fans, boilers and engines necessary for supplying the fresh air, heat, steam, hot water, and for driving the elevators. Two elevators run continuously from basement to the fifth storey, and a class of forty are taken up or brought down at the same time. The steam supply is furnished by four boilers, 18 ft. long and 4½ ft. diameter, while the conveyance of coal to the boilers and the removal of ashes from them is by an overhead trolley track, which saves a great amount of floor space. It was specified that the whole building was to be kept at a temperature of 70 degs. Fahr. in any weather, and the fans are large enough to supply fresh air at the rate of 1,800 cubic feet per hour for each pupil in the building. The air is only delivered at a temperature of 68 degs., the real warming being done by steam-heated radiators fixed in each room. The radiators are all controlled automatically, so that if the temperature in any part gets above 70 degrees the nearest radiators are partially closed off, while if it sinks below 70 degrees the steam supply is increased. This is much sounder in principle and design that the Chicago method of concentrating all the heating surface at one point, as the air is forced into the rooms at normal temperature.

The lighting is by electricity, generated by a complete plant of dynamos and high speed engines on the premises, and this is the case with most New York schools, although occasionally it is obtained from one of the supply companies. An interior telephone system is so arranged that the principal can be in constant touch with all parts of the building.

In a crowded city like New York, the playground problem is a very serious one. In this country we require a minimum unbuilt or open space for a playground equal to 30 square feet for each child. In New York the architect is pleading for a minimum playground space of at least 5 square feet per child, but in some of the more crowded areas it is almost impossible to get this.

Considerable precautions are taken to minimize fire risks, and the new schools are all in direct electric communication with the fire stations. All school doors open outwards and are fixed with automatic bolts so that it is only necessary to push against them from the inside for them to fly open. The scholars are regularly drilled in fire exercises, and at the High School of Commerce the building can be cleared in less than four minutes.

The filtering of the air has received considerable attention, and each fan has its own air supply and its own filter. The filter for each fan consists of 260 bags or sacks 6 feet long and 10 in. diameter. Fresh air enters at the front of the bag, and must, of course, pass through the fine canvas bag before it can reach the fan. The bags are easily taken down and cleaned or washed and others take their place whilst this is being done.

New Legislation.

The State of New York last year passed an Act to "Amend the Consolidated School Law Relative to the Proper Sanitation, Ventilation, and Protection from Fire of School Houses." This Act is very drastic in some of its provisions, and insists on all plans deposited with the board of education showing in detail the proposed heating, ventilating, lighting and sanitation. The Act goes on to say, "The commissioner shall not approve any plans that do not provide at least 15 square feet of floor space and 200 cubic feet of air space for each pupil. Provision must also be made for assuring at least 30 cubic feet of pure air every minute per pupil, and the facilities for exhausting the foul air shall be positive and independent of atmospheric changes." This, of course, means that no school can be built without providing mechanical ventilator of some description. The fire protection clauses are worth quoting, as these matters are entirely neglected in many English schools, and it is a custom in some schools to lock the outside doors—a most reprehensible practice. "All exit doors shall open outwardly and shall, if double doors are used, fasten with movable bolts operated simultaneously from the inner face of the door. No staircase shall be constructed except with straight runs, all changes in direction being made by platforms. No doors shall open immediately upon a flight of stairs, but a landing, at least the width of the door, shall be provided between such stairs and doorway."

The State of Pennsylvania has so recently as the 2nd of April last passed an Act, entitled, "An Act for the purpose of governing the construction of Public School Buildings in order that the health, sight and comfort of all pupils may be protected." The Act declares that "Whereas it is of great importance to the people of this Commonwealth that Public School Buildings here after erected by any Board of Education or School Trustees shall be properly heated, lighted and ventilated. No school house shall be erected in this State until the plans, specifications, etc., for the same showing in detail the proper heating, lighting and ventilating of such building have been approved.

"Light shall be admitted from the left or from the left and rear, and the total light area must equal at least 25 per cent. of the floor space. Each classroom shall have at least 15 feet of floor space and not less than 200 cubic feet of air space per pupil, and shall provide for an approved system of heating and ventilation by means of which each classroom shall be provided with fresh air at the rate of 30 cubic feet per minute for each pupil, and warmed to maintain an average of 70 degs. Fahr. in the coldest weather."

These new Acts show that the school authorities in America are keenly alive to the necessity of healthy school buildings, and one cannot help asking when our education authorities are going to wake up to the vital necessity of fixing some definite health standard for all our schools.

PLUMBERS' CASE SERIOUS.

ACCORDING to the reports in the daily newspapers the plumbers and supply men on trial in the Toronto Police Court for "conspiracy" in forming what is called the "plumbers' combine" are already convicted and sentenced to long terms in jail in addition to having to pay enormous fines. In reality the case is not as bad as that yet, it being necessary for the court to hear the witnesses and pass judgment upon the evidence submitted. But the matter is undoubtedly a serious one and is looking more so each week. From present indications it would appear that as a result of bad legal advice, referred to in a recent issue of Hardware and Metal, certain members of the trade in Toronto have placed themselves in a serious position and some may have to pay for their mistake by both fine and imprisonment.

* * *

During the past week unlooked for developments have occurred, the case in the Police Court having been proceeded with in spite of the fact that the trial before the Assize Court had been commenced. The latter court adjourned the cases to come up for further hearing on Friday of this week, the accused electing to be tried by the judge, but on Tuesday the investigation proceeded in the Police Court, Secretary W. H. Meredith being discharged as a defendant in order that he might be placed in the witness box. For over two days he was examined by Crown Attorney Curry, extracts being read from the minute books, etc., of the Master Plumbers' Association, and Mr. Meredith being asked various questions in an endeavor to prove wrongdoing. The witness firmly maintained that the association members did all they could to secure a profit of 25 per cent. on all work done and maintained that this was a fair profit for them to expect.

* * *

Agreements between the supply houses and master plumbers were inquired into, the daily newspapers seizing the opportunity to criticize the agreement harshly although it is little different from many other trade agreements in existence. It was shown that in some cases more than the regular profit was secured, but in fully 90 per cent. of the contracts performed the association's rules were adhered to, the smaller firms invariably being found to be charging the regulation prices. Some cases of violating rules of the association were investigated and it was shown that J. B. Reeves, the complainant in the present investigation, was one of the most active members and if any wrongdoing was done he was a party to it. Later on it is probable that further evidence will be presented regarding Mr. Reeves' record as treasurer of the journeymen's union.

* * *

During the examination of Mr. Meredith it developed that books showing the extent of the "I.O.U." system were kept by him, the Crown officers securing them as evidence. Members of the association claim to have no knowledge of these books, the larger firms being the ones chiefly concerned in them. Much evidence was also taken regarding the association's bank account and the distribution of the funds to the members. The cross-examination of Mr. Meredith was most exhaustive and the Crown Attorney claimed to be well satisfied with the results.

* * *

After Mr. Meredith's evidence was taken, Mr. Black, bookkeeper for J. B. Reeves, was examined in an endeavor to show that the journeymen conspired to damage Reeves' business. Secretary Morris, of the Central Supply Association, was also called to give evidence regarding the agreements entered into between the supply houses and their customers. The Crown contends that the last agreement proposed between the two associations was illegal, it being a conspiracy for the committees to merely come together and draft a proposed agreement. This is a point of law which will have to be decided, however.

* * *

On Friday the cases came up before the Assizes again and a report of their doings will be given next week. The net result of the week's doings in the Police Court is to make it practically necessary to postpone the trials until the January Assizes, thus dragging on the cases in the newspapers and keeping the accused in suspense as to the result. The loss of time has already been a heavy one and it is regrettable that the matter could not be dealt with immediately. While some of the union men have been permitted to continue work, several of the supply men and master plumbers are kept in court from day to day. In one case where a supply man wished to leave the room for a few minutes he was asked to leave his hat behind.

* * *

Throughout the country the newspapers are making charges that "combines" exist in various places. No specific action has yet been taken and the matter is undoubtedly newspaper talk. The publicity given the trials in Toronto, however, is certain to have an injurious effect on the trade generally, so that the sooner the matter is disposed of the better. If any are found guilty of wrongdoing they must suffer the consequences and it is to be hoped that they will face their trials like men rather than absenting themselves from the country. The important work before the members of the association is to discover if any rules in the association's by-laws are illegal and have them amended in order that the work of the organization in future may be such as to protect the trade from the evils of competition while giving the public the benefit of the most up-to-date work at a living price.

THE PLUMBER'S HARVEST.

THE following from an English exchange is supposed to describe the doings of an English plumber. The cap would, of course, not fit any of our Canadian readers but should prove interesting reading :

"He is walking about his shop rubbing his hands and chuckling to himself, with one eye on the thermometer and the other on the door, for as the mercury slowly sinks towards the bulb he knows there will soon be a procession of distraught householders whose water-pipes have burst, and who will anxiously implore him to save the drawing-room ceiling from destruction. Not that he intends to hurry himself. He is a plumber, and a plumber is a leisurely person, even when he is gleaning his yearly harvest. Besides, if he saved the drawing-room ceiling he would be spoiling the plasterer's little job. He peers out of his dirty window between the wonderful selection of twisted lead pipes, which look as though they were suffering from dread disease with their large bulbous joints and conventional broad black bands. Round the corner—his shop is always just round the corner—comes the first of the procession, a worried little man who has forgotten his overcoat in spite of the frost, and snatched up the first hat—his son's—from the hat-stand. 'Come to No. 3 at once. The pipe in the bath-room has burst and—' 'Just off to No. 10, sir.' 'You must come to us first, the drawing-room ceiling—' ' 'Fraid I've promised, sir. So's theirs.' 'Come at once. I'll make it worth your while.' 'Well, in that case, I'll be with you in ten minutes.' The little man goes puffing back again, and the same dialogue is repeated a dozen times with a dozen other distraught householders. Only then does the plumber leave his lair to reap his harvest. He is a leisurely man and it will last him weeks. 'If people will pour boilin' water down the pipes, 'stead of wrappin' 'em up in straw or felt, I ain't goin' to grumble,' he says. Why should he ?"

LIGHTNING RODS.

FOUR years ago the Royal Institute of British Architects appointed a committee to look into the matter of lightning rods. A report was made recently, which may be epitomized as follows :

First. Two main lightning rods, one on each side, should be provided, extending from the top of each tower, spire, or high chimney stack, by the most direct course to the earth.

Second. Horizontal conductors should connect all the vertical rods (a), along the ridge, or any other suitable position on the roof; (b) at or near the ground line.

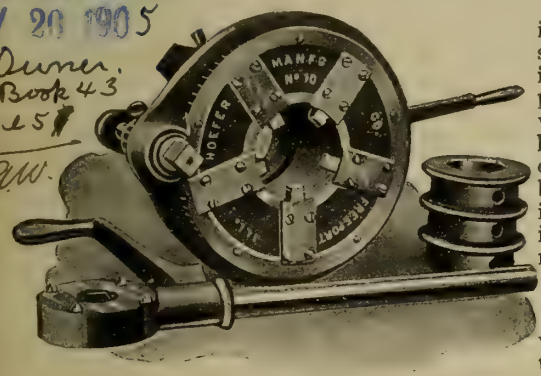
Third. The upper horizontal conductor should be fitted with aigrettes or points at intervals of 20 to 30 feet.

Fourth. Short vertical rods should be erected along minor pinnacles and connecting with the upper horizontal conductor.

Fifth. All roof metals, such as finials, ridging, rain water and ventilating pipes, metal cowls, lead-flashing gutters, etc., should be connected to the horizontal conductors.

Sixth. All large masses of metal in the building should be connected to earth either directly or by means of the lower horizontal conductor.

Seventh. Where roofs are partially or wholly metal-lined they should be connected to earth by means of vertical rods at several points.



Eighth. Gas pipes should be kept as far away as possible from the positions occupied by lightning conductors and as an additional protection the service mains to the gas meter should be metalically connected with house services leading from the meter.

HOEFER PIPE THREADING MACHINE.

A NEW adjustable hand power pipe threading machine has just been brought out by the Hoefer Mfg. Company, Freeport, Ill., who desire to secure a good agency in Canada. The machine is capable of threading pipe of any material in which it is regularly made. It cuts a standard tapered thread, the taper being effected by the slight withdrawing of the dies as they feed forward, thereby increasing the diameter of the thread. The operator does not have to force the dies on the work. They are fed forward automatically, being mounted in a gear, which is drawn in an advancing direction by a threaded sleeve having a thread of the same lead as that of the dies. The thread is cut clean and to a proper taper, so that the pipe will make up with a perfectly fitted joint and is left strongest where the thread terminates.

A distinctive feature of the machine is the provision of means for quickly adjusting the dies so that they will cut either slightly over or under the standard size. Another unique feature and one that is very desirable is that a given size of machine requires but one set of dies (five in a set) to cut the threads within its capacity; consequently much time is saved that would otherwise be

Law.

Hoefer Adjustable Hand Power Pipe Threading Machine.

lost in substituting a new set of dies to cut another size of pipe. The dies are arranged with a projection which insures the correct centreing of the pipe, and as the dies are not taken out of the machine they cannot be lost.

The machine may be operated easily by one man, as a powerful leverage is obtained and the friction is comparatively small, making only a moderate amount of labor necessary. The machine is of simple construction and although light is claimed to be very strong. It is described as having no complicated parts to get out of order, and the moving parts are so protected that they will not become clogged with dirt or chips. The dies may be readily sharpened by grinding their faces. They are all numbered in their proper order and any number can be duplicated.

A HEATING PATENT.

A boiler furnace, as is known, works best when as little heat as possible escapes through the chimney. To some extent, says Technische Berichte, this escape is unavoidable, for if all the heat were utilized the chimney would not draw, since it is the heat in the chimney which first produces the draft in the furnace necessary for burning the fuel. Nevertheless, too much heat escapes by the chimney in most cases. A patent recently granted professes to rectify this defect by bringing the flue containing the products of combustion to the place where the steam is applied before it passes into the chimney. The air, steam, or hot water and feed pipes are passed through this flue, so that the heat contained in the gases of combustion prevents radiation from the pipes in question and contributes to the heating of the air, water and steam.

PLUMBING NEWS.

Hemmond & Rodway, Winnipeg, have secured the contract to install heating and plumbing systems in the new Normal School at Winnipeg.

* * *

S. G. Gourlay, St. Catharines, is to install one of the new "Bernhardt" boilers, made by the Garwood Foundry & Machine Co., Garwood, N.J., in a building for which he has secured the contract to install a heating system. The "Bernhardt" is pronounced a wonder by all who have seen it.

* * *

Rumors are rife of the establishment in Toronto of a factory to manufacture steel radiators. The plant will be, it is said, a branch of an American company. About a year ago a company in which Mr. Safford, well known to the heating trade, was interested, secured a charter to manufacture steel radiators, but little has been heard of what they intend to do. Naturally this company is being connected with the present rumors.

* * *

The James Smart Mfg. Co., Brockville, report securing the following contracts to install heating and ventilating systems: St. Andrew's Church, Hanover; Episcopal Church, Forest; Presbyterian Church, Kingston; Disciples Church, Collingwood; Methodist Church, Brinston's Corners, and the Roman Catholic Church, St. Anicet, Que.

* * *

Taylor-Forbes' new warehouse on King street west, Toronto, has been stocked up with "Sovereign" radiators and boilers during the past week, the new warehouse being a great convenience in shipping goods.

NO BAD DEBT.

A FRIEND of mine was recently returning by train from Buffalo. In the smoking room of the car were a number of commercial travelers who were engaged in discussing losses from bad accounts. During the conversation some were boasting how little their firm had lost through goods sold by them.

"You fellows may boast as you like," said my friend, whose identity was unknown to them, "but I am with a house in Toronto which does a business of $10,000,000 a year, and we never have a bad debt; never lose a cent."

The travelers looked at him with scorn, and one remarked: "What house are you with?"

"With the Customs House of Toronto," said he, "and we are always paid in advance."

"Well, by Jove, you have got us. Come and have something at my expense," said the traveler who had doubted the Customs House man's veracity. W. L. E.

DON'TS FOR BOILERS USERS.

A BOILER manufacturing firm in England incorporates in its catalogue some practical don'ts for those handling boilers. They are:

Don't fix sectional boilers to poor chimneys, as they require a good draught. Don't let the ashes accumulate under the fire-bars. Don't let the soot remain in the boiler-flues. Don't use small slack, as it is not economical. Don't put the new fuel towards the back of the boiler when firing, but near the front. Don't let the fire-bars become uncovered at the back. Don't leave the firing-door open. Don't let the fire out during frost. Don't light a fire in the boiler when the pipes are frozen. Don't fix a boiler without a safety-valve. Don't allow hot water to be drawn off from the boiler. Don't fix the cold water supply pipe direct into the boiler. Don't empty the apparatus during the Summer months. Don't screw sectional boilers up too tightly. Don't light a fire in a new boiler before the bolts have been slacked back. Don't fix a boiler without covering it with non-conducting material. Don't try to make the boiler sections meet, as they are not intended to. Don't fix a boiler more than two sizes larger than is necessary for the work. Don't fix a boiler to work to its full listed capacity. Don't be content with an old pattern boiler, when a modern one will save its cost in one or two years.

HORSE-POWER VS. MAN-POWER.

THE measurement of a horse's power of work, first ascertained by Watt, the inventor of the steam engine, was founded upon the basis that the average brewery horse was capable of doing work equal to that required to raise 330 lb. of weight 100 ft. in one minute, or 33,000 lb. one foot in one minute. This estimate, however, was for one minute; it would not be possible for a horse to perform this amount of work continuously for eight consecutive hours. One horse could exhaust 12 men in a single day, for where a strong man could perhaps pull half of 330 lb. to a height of 100 ft. in two minutes, he probably could not repeat the operation more than a few times. A man's power is about one-tenth of a horse's power. That is, where a horse could pull 330 lb. to a height of 100 ft., one minute, and then slack up and repeat the operation, for eight hours, thus pulling four hours, and slacking up four hours, it would require ten strong men to perform the same amount in that length of time. When man put horses to work the gain in labor for the world was thus ten-fold. Multiply this by steam power, water power, air power, and above all, electric power, and one has a problem in mechanical progression. — Popular Mechanics.

PLUMBING MARKETS

QUEBEC.

Office of HARDWARE AND METAL,
232 McGill Street,
Montreal, November 17, 1905.

A FEVERISH haste to ship goods before the winter freights came into force characterized the early part of the week, and as many of these rush orders were received too late to be sent out on the 14th (the last day of summer freight rates) the last days of the week were also more than ordinarily busy.

The shortage of iron pipe which has been so marked of late reached an acute stage this week, with the result that deliveries on nearly all sizes both of black and galvanized are nearly impossible to get. The culmination was the inevitable withdrawal of discounts by the manufacturers, and the substitution of advanced prices.

Iron pipe fittings are also difficult to obtain, the local foundries being rushed to their utmost capacity to fill orders. Between the demands of the retailers for immediate shipments, and the difficulty of getting new stock from manufacturers, the jobbers are at their wits' end this week.

Range Boilers—A steady trade is manifest. Prices remain as follows: Iron clad, 30 gallon, $6.00, and 40 gallon, $7.50 net; copper, 30 gallon, $22.00; 35 gallon, $24.00; 40 gallon, $28. The discount on copper boilers is 15 per cent.

Lead Pipe—Last week's advance has been held very firm, especially in view of another advance in the primary market. Prices are: Discounts twenty-five per cent f.o.b. Montreal, Toronto, St. John, N.B., and Halifax; f.o.b. London, 15c. per hundred lbs. extra; f.o.b. Hamilton, 10c. per hundred lbs. extra.

Iron Pipe—The continued scarcity, added to steady advances in all iron products, has compelled manufacturers to withdraw their discounts. Prices now are as follows: Standard pipe, in lots of 100 feet, regular lengths, 1-4 inch, $5.50; 3-8 inch, $5.50; 1-2 inch, $8.50; 3-4 inch, $11.50; 1 inch, $16.50; 1 1-4 inches, $22.50; 1 1-2 inches, $27.00; 2 inches, $36.00; discounts on black pipe, 1-4 inch, 62 per cent.; 3-8 inch, 62 per cent.; 1-2 inch, 71 1-2 per cent.; 3-4 inch, and upwards, 73 1-2 per cent. Discounts on galvanized pipe: 1-4 inch, 47 per cent.; 3-8 inch, 47 per cent.; 1-2 inch, 61 1-2 per cent.; 3-4 inch and upwards, 63 1-2 per cent. Extra heavy pipe of 100 feet lots are quoted as follows: 1-2 inch, $12.00; 3-4 inch, $15,000; 1 inch, $22.00; 1 1-4 inches, $30.00; 1 1-2 inches, $36.00; 2 inches, $50.00. The discount for black pipe is: 71 per cent., and for galvanized 61 per cent.

Soil Pipe and Fittings—Last week's situation is continued in the present one. There is a fine demand for these goods. Our discounts are as follows: Standard soil pipe, 50 per cent. off list. Standard fittings, 50 and 10 per cent. off list; medium and extra heavy soil pipe, 60 per cent. off. Fittings, 60 per cent off.

Solder—Conditions are steady. We quote as follows: Bar solder, half-and-half, guaranteed, 21c.; No. 2, (wiping solder) 17c.

ONTARIO.

Office of HARDWARE AND METAL,
10 Front Street East,
Toronto, Nov. 17, 1905.

IRON pipe's advance of a week ago holds quite firm, and low stocks will cause the figures to jump upward again during the coming week in all probability. Some dealers having large stocks are still selling low, but the majority are unable to do better than the figures we quote.

Low down syphon closets and, in fact, all Canadian enamelware, have advanced as announced last week. Lead pipe holds firm at the higher figure and solder is being held higher, the increasing prices of lead and tin being responsible.

Business continues remarkably good for this season. Trade in Toronto is being affected adversely, however, by the trial of the master plumbers and supply men charged with "conspiracy" in organizing a "combine." Instead of attending to their work a large number are forced to hang around the court room and days and weeks of valuable time are being lost.

Lead Pipe—Last week's advance holds very firm and a fair trade is doing. Our quotations are as follows: Lead, 7c.; lead waste pipe, 8c.; discount, 25 per cent.

Soil Pipe and Fittings—Buying is very active owing to the rush of opening the ground before it is frozen up. Our quotations are as follows: Medium and extra heavy pipe and fittings, 60 per cent.; 7 and 8 inch pipe, 40 and 5 per cent.

Iron Pipe—Another advance is predicted, the recent rise being adhered to by most dealers. We quote as follows: Black, 1-4 inch, $2.09; 3-8 inch, $2.09; 1-2 inch, $2.38; 3-4 inch, $2.99; 1 inch, $4.29; 1 1-4 inch, $5.85; 1 1-2 inch, $7.02; 2 inch, $9.36; 2 1-2 inch, $15.75; 3 inch, $30.50; galvanized 1-4 inch, $2.92; 3-8 inch, $3.08; 1-2 inch, $3.53; 3-4 inch, $4.14; 1 inch, $5.94; 1 1-4 inch, $8.10; 1 1-2 inch, $9.72; 2 inch, $12.96; 2 1-2 inch, $23.00; 3 inch, $30.

Iron Pipe Fittings—Trade is quite active owing to the heavy demand for heating supplies. We quote: Cast iron, elbows, tees, crosses, etc., 65 per cent.; cast iron plugs and bushings, 65 per cent.; flange unions, 65 per cent.; nipples, 75 per cent.; iron cocks, 60 per cent.; Canadian malleable, 35 per cent.; American malleable, 25 per cent.; malleable unions, 65 per cent.; malleable bushings and plugs, 60 per cent.; C. I. ceiling plates, plain or N. P., 70 per cent.; C. I. floor, 80 per cent.; hookplates, 60 per cent.; expansion plates, 65 per cent.; headers or branch tees, 65 per cent.; ring hangers, black or galvanized, 60 per cent., American list.

Galvanized Iron Range Boilers—Demand for boilers is very brisk as many contracts are being completed. We quote: 12 gallon capacity, standard, $4.50; extra heavy, $6.50; 18 gallon, standard, $4.75; extra heavy, 6.75; 24 gallons, standard, $4.75; extra heavy, $6.75; 30 gallon, standard, $5; extra heavy, $7.50; 35 gallon, standard, $6; extra heavy, $9.50; 52 gallon, $11; extra heavy, $14; 66 gallon, standard, $18; extra heavy, $20; 82 gallon, standard, $21; extra heavy, $24; 100 gallon, standard, $29; extra heavy, $34; 120 gallon, standard, $34; extra heavy, $40; 144 gallon, standard, $47; extra heavy, $55. The discount on copper and range boilers continues at 15 per cent.

Solder—As predicted a fortnight ago, prices have been advanced, our quotations now being: Bar solder, half-and-half, guaranted, 20 1-2c.; refined, 19c., and wiping at 18 1-4c.

Enameled Ware—We are unable to announce the new list figures on Canadian enamel ware, but an advance has been made covering all lines. The high price of iron is largely responsible for the increase.

'TWAS WORK TOO.

Prof. Nichol, the Cornell physicist, during the recitation of a freshman class in natural philosophy, observed a tall, lanky youth in a rear seat, his head in a recumbent position, his body in a languid poise, his eyes half closed and his legs extended far out in an adjacent aisle. He was either asleep or about to lose consciousness.

"Mr. Frazer," said the great scientist, "you may recite."

The freshman opened his eyes slowly. He did not change his somnolent pose.

"Mr. Fraser, what is work?"

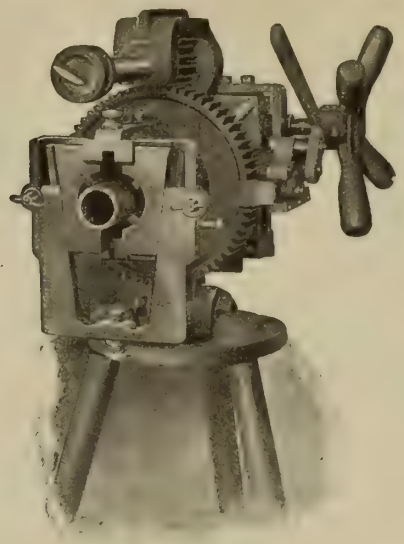
"Everything is work," was the drawling reply.

"What! Everything is work?"

"Yes, sir."

"Then, I take it, you would like me and the class to believe that this desk is work?"

"Yes, sir," replied the youth wearily, "that desk is woodwork." — Cornell Widow.



RAMSAY'S ALUMINUM PAINT

The beautiful silvery Paint—better and cheaper than silver—must be made right for right effects. Splendid for store fronts, stove-pipes, radiators, decoration work and a hundred wants. Mixed ready for use, in handsome tins from ¼ pint up.

Ramsay's Aluminum is right Aluminum.

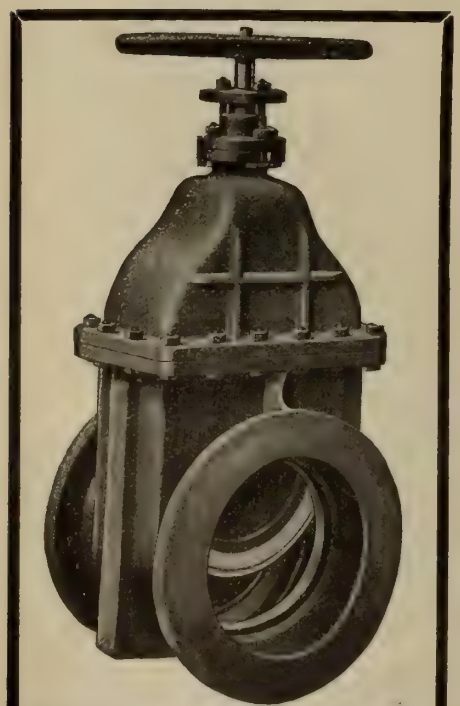
A SIGN OF THE TIMES

THE CANADIAN FAIRBANKS CO., Limited

MONTREAL TORONTO WINNIPEG VANCOUVER

Merrell Portable Hand Machines

Nos. 5, 6, 9 and 11



These machines do better and more rapid work, both in threading and cutting off, than any other hand machine on the market. They have a greater range of work and make quicker changes from size to size of pipe. The vise is self-centering, is actuated by rack and pinion to feed the pipe into the chasers. The machines have our Standard Adjustable quick-opening and closing Die Head, and our Improved Cutting-off Knife. No. 5 cuts and threads pipe 1 to 4 inches, inclusive; No. 6 cuts and threads pipe 1 to 6 inches, inclusive.

THE TRANSMISSION OF HEAT.

PROFESSOR TYNDALL explained that the transmission of heat is powerfully influenced by the mechanical state of the body through which it passes. Pure silica, in the state of hard rock crystal, is a better conductor than bismuth or lead, but if the crystal be reduced to powder, the propagation of heat is exceedingly slow. Through transparent rock salt, heat is copiously conducted, but through common table salt very feebly. Asbestos, he explains, is composed of certain silicates in a fibrous condition, and he could place some asbestos in his hand, and in it a red-hot iron ball which he could hold without inconvenience. That the division of the substance should interfere with the transmission might be reasonably inferred, for heat being motion, anything which disturbs the continuity of the molecular chain, along which the motion is conveyed, must affect the transmission. In the case of asbestos, the fibres are separated from each other by spaces of air; the motion has, therefore, to pass from solid to air, and from air to solid, and it is easy, consequently, to see that the transmission of vibratory motion through this composite texture must be very imperfect. —Tyndall on Heat.

VALUE OF AIR SUPPLY.

THE science of architecture, if under this head we include the principles of building construction and the heating and ventilation of buildings, has done and is doing much of interest and importance to the student of public health science. The air supply, especially for the modern civilized and too often sedentary form of mankind, is in the long run quite as important as the water supply, the milk supply, or any other supply. Surely we can not be too careful of the purity of a substance which we take into our bodies oftener and in larger volume than any other, and which has come, rightly no doubt and as the result of long and painful experience, to be known as the very breath of life. Human beings may survive and seemingly thrive, even for long periods, in bad air, but for the best work, the highest efficiency, the greatest happiness and the largest life, as well as for perfect health, the very best atmosphere is none too good. Hence the permeability of the walls of houses and other buildings, and the heating and ventilation of dwellings, school houses, churches, halls and other public places require, and in the near future will receive, a much larger share of our attention than they have to-day.

WESTERN HEATING CONTRACT.

Smith & Fergusson Co., Limited, Regina, are busy installing the heating and ventilating system in St. Paul's Church. The specifications called for a Pease Economy furnace.

In Nelson, B.C., the J. H. Ashdown Hardware Co. are installing a Pease Economy furnace in the public school. This firm are agents for the Pease-Waldon Co. of Winnipeg.

The Pease-Waldon Co. specifications have been accepted for the heating and ventilating of the public school in Carlyle, Sask. Porteous Bros., the local agents for the company, are installing the work. W. A. Elliott, of Brandon, is the architect in charge.

Clinch that Contract Now

The man who waits until he is asked to figure on a heating system is likely to remain waiting. You must go out after business now-a-days.

Make sure that you have a chance to submit your tender. This is the best time to hustle for Spring trade. Go after the man who is going to put up that new building. Talk about an

OXFORD HEATING SYSTEM

and you'll not only have a chance to figure on the job, but ten chances to one of getting it.

The Oxford System has so many convincing points, is so irresistible a proposition that it will go far towards clinching that contract.

Our Oxford ("B" Series) Boiler is immensely superior to anything ever offered in the heating line. The principal feature of the Boiler is the improved build of the fire-pot, which is wider at the bottom than at the top. The upper walls overhang the fire and, as a practical man, you will notice by a glance at the cut that this must add greatly to the effective heating power of the surfaces in question.

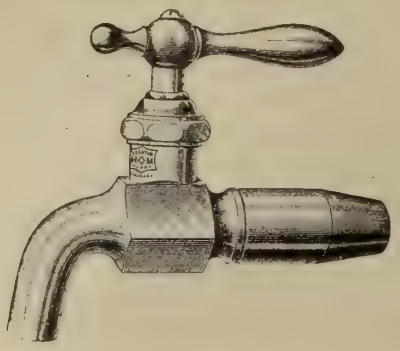
A joint that is a joint. Squeezing in layers of rubber is the old method of making joints, and, of course, the source of endless trouble and annoyance. Our new method—smooth tapered steel nipples pressed into smooth tapered holes—makes an absolutely permanent metal to metal joint.

Our smaller sizes in Oxford Boilers save your time. They are built together when we ship them, so the steamfitter has only one joint to make.

Oxford Steam and Hot Water Radiators are a fitting complement to Oxford Boilers, and these, in combination, assure Beauty with Economy, Efficiency and Consequent Comfort.

Send for the Gurney Oxford Book of Steam and Hot Water Heating Apparatus.

WE also manufacture cast iron and steel plate ranges, gas stoves, ranges and heaters, hotel ranges, warm air furnaces and all kinds of cooking and heating apparatus, plumbers' supplies.



The Gurney Foundry Co., Limited

MUELLER FULLER WORK

STANDARD GRADE BIBB.

In some fuller bibbs the bearings at the eccentric and ball stem joint wear prematurely and get so much play that the bibb will neither fully open nor tightly close.

In Mueller Fuller Bibbs the bearings at this point have broad enough surfaces to make them wear for years without being perceptibly affected. They will always admit a full stream and completely shut it off.

Mueller Fuller Bibbs are made in plain and hose patterns and with tail pieces for all styles of pipe connection. The Bibb illustrated is the plain pattern with lead pipe tail piece.

Each Bibb bears the Mueller trade mark and is *unconditionally guaranteed.*

COMMERCIAL TRAVELERS.

At the quarterly meeting of the Dominion Commercial Travelers' Association, held Saturday night in their rooms, Board of Trade building, Montreal, the president, Mr. J. S. N. Dougall, made a report showing an increase of 380 members, and a record of 860 new ones, making the total over 5,000 on this roll.

During the meeting there was quite a long discussion over a new bank account which had been opened, the president and treasurer showing the benefits derived by the association in so doing. Finally the action of the Board of Management was confirmed, and a vote of confidence was unanimously passed.

Nominations for officers and directors for the ensuing year resulted in the following names being brought forward:

President—Fred L. Cains, of the firm of Brophy, Cains, Limited; W. J. Egan representing W. R. Brock & Co.

Vice-president—E. D. Marceau was elected by acclamation.

Treasurer—Robt. C. Wilkins by acclamation.

Directors—Ed. S. Bois, R. J. Forman, J. D. Shaw, W. F. Cleghorn, A. Terroux, Jas. S. Thompson, J. B. Giles, and G. W. Prescotte.

To keep pace with Montreal's growing commerce, it is proposed to build a new $3,000,000 wharf.

BENNETT MANUFACTURING CO.

Practically no dividend will be paid creditors of the Bennett Manufacturing Co., Pickering, manufacturers of hardware boxes, refrigerators, kitchen cabinets, etc. The company went into liquidation some time ago and it has now been announced that the liquidators have been unable to dispose of the machinery, although considerable advertising has been done. The machinery is covered by liens for all it is worth. The other chattels were disposed of and realized about $800 clear out of which rent, wages and insurance will be paid. The claims against the company amount in all to $9,000.

WALKER CORK SCREWS

are good holiday souvenirs and live sellers the whole year. Are made well and are made out of good material. That is why we guarantee every one that we put out. When ordering Cork Screws try **Walkers.**

Books for Plumbers, Steam Fitters, Etc.

Furnace Heating

By W. C. Snow.

The author has prepared a book of reference for the furnace man or the architect. There are tables which have been tested by years of practical use. They are of great value to the practical furnace man.

170 pages, 6 x 9 in.; 90 illustrations; cloth bound.

Price, post paid, - - $1

(This book has had a heavy sale in Canada.)

* * *

Kitchen Boiler Connections.

A selection of practical letters and articles relating to water backs and range boilers.

The work is divided into two parts, the first on water backs and boilers and their connections, and the second on heating rooms from range boilers, a topic that has much practical interest to the plumber. There are few lines of work where so many little difficulties arise, and therefore the discussion of different questions which have arisen should be of great interest as well as practical value to workers in this line.

Fifth enlarged edition; 194 pages; 6 x 9¼ inches; 113 illustrations.

Cloth, post paid, - - $1

* * *

Formulas and Tables for Heating.

Being German formulas and tables for heating and ventilating work, for those who plan or erect heating apparatus. By J. H. Kinealy, M.E.; 56 pages; 4½ x 7 inches; leather.

Price, post paid, - -

* * *

American Sanitary Plumbing

By J. J. Lawler.

For plumbers, steam fitters, architects, builders, apprentices, etc. Containing practical information of all the principles involved in the mechanics and science of modern plumbing, illustrating with original sketches the fundamental principles of everything the plumber should know. Everything explained in the most simple language, so that it will be impossible to misunderstand anything.

Large 12mo, cloth, post paid, - $2

Steam and Hot Water Fitters' Text Book.

A book prepared for the Steam and Hot Water Heating Course at the New York Trade School, with supplementary chapters on house heating, specifications and surface estimating; by Thos. E. McNeill.

This book will be appreciated by those who wish to master the principles of steam and hot water heating. The definitions in the beginning deal with the appliances, and little by little the reader is led on until at the close he is informed how to figure surfaces, lay out plans and install heating apparatus with the necessary piping.

140 pages; numerous illustrations and diagrams; 5 x 7 inches.

Cloth, post paid, - - $1

* * *

Plumbing and House Draining Problems

A selection of articles for practical plumbers.

This volume provides reliable and practical information for ready reference and assistance to plumbers who are confronted by problems with which they have had no previous experience. One-half of the edition is devoted to new problems and special articles. This book will prove a valuable reference in any plumber's library.

297 pages; 6 x 9 inches; 146 illustrations.

Cloth, post paid, - -

* * *

Practical Gas Fittings.

Describing how to run mains, lay pipes and put up gas fixtures. 116 pages; 54 illustrations; 5¾ x 8 inches.

Cloth, post paid, - - $1

* * *

Practical Hints on Joint Wiping.

A book containing articles on practical joint wiping for beginners in plumbing, with an appendix giving a selection of practical letters and articles.

66 pages; 5½ x 8; 41 illustrations.

Paper, post paid, - - 25c.

A SQUARE DEAL
FOR
Square Dealers

Square dealers, we take it, are those who try to give their customers goods that are "square" —honest all through. For forty years we have been giving all dealers the "square deal."

We make all the "ENTERPRISE" hardware specialties just as good as we know how—then we go out and tell the public of all the world about their merits. Square Dealers *distribute* them—they are already *sold*. Just ahead is the big demand for

"ENTERPRISE"

Meat and Food Choppers and "ENTERPRISE" Sausage Stuffers, Lard and Fruit Presses. They are being widely advertised now to the public. Write for our literature about them, including our new catalogue of all the "ENTERPRISE" specialties. Get ready for the biggest season you have ever seen on "ENTERPRISE" goods. We are ready. Get your share.

Increase your sale of "Enterprise" Meat and Food Choppers by using our new Booklet: "The Cook, Her Critic and—." We will send you a supply of these on request.

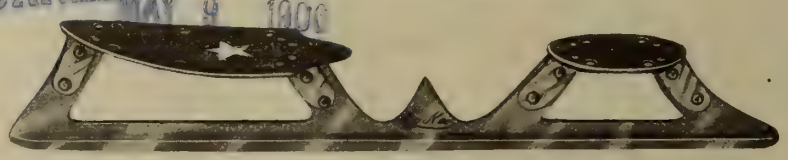
"MIC-MAC" HOCKEY SKATE



RETURNED MAY 9 1906
To owner
cut Book to
Page 16 W.S.E.

The Mic-Mac Hockey Skate is copyrighted by us, both as to design and name.

PLAIN RUNNER WITH PUCK STOP

RETURNED MAY 9 1906

FLANGED RUNNER WITH PUCK STOP

We also make the above patterns **WITHOUT** Puck Stops.

Mic-Mac and Regal Skates are made only in highest Starr quality. Dealers should carry them to satisfy their best customers

THE Mic-Mac Hockey Skate in the standard weight pattern is very popular with Senior Hockey players because of certain points which it possesses. It is made with a double centre bracket and is correctly designed so as to accomplish speed. To all these important good points is added the quality of neat appearance.

THE "REGAL" HOCKEY SKATE

There is not a handsomer or richer-looking skate made than the Regal, and the name is quite in harmony with its style and unapproachable quality. It is made with loop bracket as originally designed by us, and with a new (1905) heel.

RETURNED MAY 9 1906

$1.00 Post Paid

Manufacturing Cost

By H. L. C. Hall

This book is a new departure in the way of a book on "cost accounting." In it you will find treated the principles of the science instead of a description of what some one else has done. Other people's systems do not interest you unless you can apply them to your own uses, hence only those which can be applied to your own needs are touched upon.

The Buyer, The Manager, The Superintendent, The Book-keeper, The Secretary, The Sales Agent and all those interested in knowing "what it costs" should secure a copy. Send for circular

Price, $3.00 Post Paid

Thorne's Twentieth Century Book-keeping and Business Practice

By W. W. Thorne

Mr. W. W. Thorne is the acknowledged leading authority on Book-keeping in the United States and Canada. The Ontario Government recently engaged Mr. Thorne to re-model the book-keeping system of the Province.

The Index of this book contains over nine hundred references and is so arranged that any subject can be referred to instantly.

Some Subjects Treated

Accounts Receivable	Accounts Payable
Adjustments	Assets
Averaging Accounts	Bad Debts
Balance Sheet	Bond Accounts
Bank Accounting	Capital
Capital Stock	Card Ledgers
Cash Books	Cash Discounts
Checking Systems	Cost Accounts
Cross Entry	Distribution of Accounts
Depreciation	Double Entry
Expense	Installments
Interest	Journals
Ledgers	Merchandise Accounts
Etc.,	Etc.

If you are a book-keeper you cannot do without it.

If you are a business man it will be worth money to you.

Out This Week

The November Number of

THE BUSINESS MAGAZINE

Our Home Publication for the Busy Man and His Family.

Read this clever article, which appears in the November number, and imagine twenty-five more just as good.

How Great Business Men Keep Well.

(THE WORLD MAGAZINE.)

Amid the strenuous conditions which prevail to-day in the business world, the great captains of industry find their only safety in an increased leisure and the pursuit of healthful pastimes. The greater the business and the greater the wear and tear of the responsibility, the greater the need for an enforced leisure. That is why millionaire business men pay their thousands and thousands of dollars for outdoor recreation.

WHAT means do rich business men take to preserve their health? They have a system to which, almost without exception, they each and all conform. This system is founded on one remedy. One New York man pursues it at the cost of $500,000 a year; another, equally devoted to it, has it without cost. These two men are about equally rich and powerful.

It is enlightening to all the world to know this system, so costly and so cheap and so efficacious for these great men of affairs are healthy men. They are marvels of success in finance and in health.

To triumph in the strenuous life requires more than genius and wealth. It means endurance and force. Health is the great business man's greatest asset. A Rockefeller ailing in the height of his daring career would give a million dollars "for a new stomach." Schwab to recover from the impairment of his giant strength spends in two years a fortune that would buy the town in which he was born.

One millionaire in New York employs a physician at $10,000 a year to attend him—because he did not follow the system. Another, during a painful illness two years ago, contracted with a doctor to serve him exclusively for five years. Lately, conforming to the system by this same doctor's advice and the example of his associates, he paid the doctor a large lump sum to end the contract.

But the physicians testify that the millionaire men of affairs are poor customers of theirs. Their system of health-keeping is not medical.

Fresh air and a change of scene, developed to a science and a system, is the New York multi-millionaire's panacea for all his ills.

(For the rest of this article, see November number).

AMONGST OURSELVES

MORE than the usual number of letters have been received during the past week from subscribers who desire the aid of Hardware and Metal's staff in securing information of value to them. We reproduce a few of the requests, as the information given on the points raised will probably be of interest to others of our readers. This also affords an opportunity of urging upon our readers the advisability of corresponding with the editor more than is done at present. Any information that can be secured by our staff will be cheerfully given. In some cases time may be required in order to give a definite reply, but in such an event the correspondent will be notified. A question that is in the mind of one of our readers is likely to be a problem to others, and if a sufficient number of queries are made a "Question Box" department would probably develop into one of the most interesting in the paper.

* * *

The two letters from Morrisburg reproduced in this issue are also worthy of commenting upon. Hardware and Metal has practically fought alone in opposition to the "promoter's enterprise" at Morrisburg, and it is gratifying to have two of the most reputable citizens of that town write commending the stand we have taken. On such matters as this—and the hardware trade is vitally interested in the proposition to establish a tin plate industry in Canada—readers in all parts of the country should express their opinions in letters to Hardware and Metal, the columns of which are open to a discussion of any subject of interest to the trade.

* * *

The freight charges evil referred to in a recent letter from Purvis Brothers, Sudbury, has not raised a discussion, but it undoubtedly is a matter worthy of the closest attention of the retail trade. If the local merchant is to pay "extras" he should understand the "whys and wherefores" of the question. Were a strong Retail Hardware Dealers' Association in existence in Ontario that body could act on such a question, but in the meantime the columns of this paper provide a good medium for discussion.

* * *

Hardware merchants in all parts of Ontario are realizing more and more the necessity of a retail association to deal particularly with the hardware trade. The Retail Merchants' Association may be a good organization for grocers and other tradesmen, but it has failed to grasp its opportunities and cannot be considered a factor in the organization of the hardware trade. Mr. W. A. Matthews, of Ross & Matthews, Cannington, in a recent chat with Hardware and Metal said the hardwaremen in his district were more than anxious to have the trade organized, and he agreed that it would be a good plan to discuss the matter fully during the coming Winter in the columns of Hardware and Metal, following this up with a call for a convention in Toronto next Good Friday. At this gathering the preliminary steps towards forming an organization could be taken and the work completed at a larger convention, to be held at the time of the Toronto Exhibition. What have readers of Hardware and Metal to say to this suggestion?

* * *

"The Organization of a Hardware Association" is the title of an article which will appear in these columns next week or the week after. It will be written by one of the best informed men who has attended the conventions of the Retail Hardware and Stove Dealers' Associations in Manitoba and the Northwest, and it will be interesting reading. Other articles will follow by other writers. But the matter of organization affects the retail hardware merchants chiefly, and if they are in earnest about it they will write us letters expressing their views on the matter.

MORRISBURG, ONT., NOV. 17, 1905.

THE MACLEAN PUBLISHING CO.,
Toronto.

Dear Sirs,—Enclosed herewith find thirty cents (30c.) in payment for three copies of HARDWARE AND METAL.

As regards subscription to Canadian Grocer, my business is entirely with cheese and butter exporters and consequently your valuable paper would not be of much benefit to me in a business way.

I take this opportunity of congratulating you upon the fearless and public-spirited manner in which you have treated a matter that not only affects the investing public generally, but is likely to be of serious consequence to Morrisburg ratepayers if the proposed scheme is carried out. My only regret is, that the information in the three journals referred to was not available to the ratepayers of Morrisburg before the by-law granting the promoters certain concessions and privileges was submitted for the ratepayers' approval.

Yours very truly,

WM. EAGER, Manufacturer.

* * *

Norman H. Dahmer, Conestogo, writes, stating that he recently saw an advertisement of gasoline soldering irons, and states that he would like to know the names of the makers and secure prices of these goods.

There are several lines on the market, one being manufactured by the Gleason Mfg. Co., New York.

* *

Babb & Kirkland, Portage la Prairie, Man., desire to secure the name of the manufacturer of a tinner's torch for coal oil, called the "Primus." They state that such a torch would be a real boon to take the place of gasoline torches, the cost of extra insurance where gasoline is carried being very heavy.

We cannot give the address of the manufacturer of the Primus, but some reader of Hardware and Metal may be able to do so. The White Mfg. Co., Chicago., manufacture a coal oil tinner's torch, however.

* * *

Cleland Bros., Meaford, write, asking the addresses of makers of metallic numbers for house numbering.

These goods are carried in stock by several of the wholesale houses, they being manufactured in Toronto by Messrs. Patterson & Heward, 319 King street west, and D. Johnson, 3 Markham street, Toronto.

* *

Jas. F. Denwoodie, Souris, Man., writes, asking for some good book on hardware window dressing and adds. "I might say I am more than delighted with Hardware and Metal, and your Business Magazine is also a credit to any publishing house. I do not know how I got along without Hardware and Metal so long, as it would be impossible now."

We have recommended "The American Hardware Store," by R. R. Williams, and sold by MacLean Publishing Co. at $3, as the best book dealing with window dressing and other subjects of interest to the hardware merchants.

* * *

Stephenson & Illsey, Red Deer, Alta., write us as follows: "Can you furnish us with this information? In general contract work in modern tin and plumbing shops, what system of figuring is used? Our rule is to secure a list of requirements, fittings, and time, and to the sum total of initial or first cost, add our percentage of profit. Our reason for asking this is simply because we have an idea that some acquire a list of stock required and add to this their percentage and then figure the time required for the completion of the work, separately and at the usual rate charged for jobbing or contract work as the case may be. Also, if you can, kindly tell us what rates are charged by the leading shops for tinners' and plumbers' time in Toronto?"

* * *

Messrs. Stephenson & Illsey had adopted the proper method of figuring contract work, viz., to make out a complete list of all materials required, estimate the amount of time that will be consumed in installing the plant, and as the cost of materials and time represents the amount of money which they must lay out, it is quite reasonable and right that they should have a profit on

the total cost, instead of on the cost of the materials only. It is also usual, where competition will permit, to add an additional 5 per cent. to cost of both materials and time for unforeseen and unprovided for details. The cost to the consumer, for plumber and helper, is 65c. per hour.

* * *

While still discussing the subject of correspondence, reference might be made to the investigation being made into the plumbers' and hardware "combines" in Toronto. While the cases are before the court Hardware and Metal will endeavor to give the news as fairly as can be done to all branches of the trade. Sensation mongering will be left, however, to the daily press. Undoubtedly there will be some interesting points brought out, but the courts should be left to try the cases and find the accused guilty of any wrongdoing that can be proved against them. If any point arises which any reader desires to discuss space will be given, provided the correspondence does not come under the ruling of the court condemning unfair criticism of accused persons before they have been found guilty.

* * *

Letters of friendly criticism, or suggestions whereby improvements may be made in the paper, will also be appreciated by the publishers. The growth of the paper during the past year has been most satisfactory, but if the reading matter or special departments can be improved upon the publishers are anxious to make the change. Particular attention might be drawn to the Plumbing and Steamfitting section of the paper. In reading matter and advertisements the department is now the most important in the paper, and many commendations have been received regarding the practical value of Mr. Quinn's articles, particularly to plumbers in the country districts. One plumber from a small Ontario town says he makes a practice of sending Hardware and Metal up to the workshop as soon as it arrives each week, rather than allowing it to lie in the office where none but the proprietor can see it. We try to make the paper interesting to the clerk and workmen, as well as the business man, and the plumber referred to appreciates our efforts. Ask yourself if you are making as good use of the paper?

Iver Johnson's 1906 Calendar.

A HANDSOME CALENDAR

Iver Johnson's Arms and Cycle Works, Fitchburg, Mass., have published a beautiful calendar for 1906, a reproduction of which is given herewith. Such calendars as these are not only a convenience but a standing advertisement in the hardware store, and readers of this paper will do well to write for a copy, mentioning the offer of a free copy made in Hardware and Metal.

CATALOGUES, BOOKLETS, ETC.

When sending catalogues for review, manufacturers would confer a favor by pointing out the new articles hat they contain. It would assist the editor in writing the review.

Toronto Silver Plate.

Three fine catalogues issued by the Toronto Silver Plate Co., Toronto, are available to readers of Hardware and Metal who carry plated goods and hollow-ware in stock for the holiday and all the year round trade. Catalogue No. 18 deals with sterling silver and electro-silver plate, it containing 96 pages handsomely illustrated with engravings of several hundred styles of silver goods, table sets, berry dishes, cake baskets, cruets, water sets, etc. Catalogue No. 20 is devoted to trophies and prize cups, about 40 pages being given containing illustrations of numerous articles suitable for presentations. Catalogue No. 21 contains 40 pages and cover. The articles illustrated comprise all classes of table cutlery. The catalogues should be in the hands of every hardware merchant, as those who have not already laid in a stock of silverware are almost certain to find it to their ahvantage to do so.

Pipe That is Pipe.

The Page-Hersey Iron & Tube Co., Guelph, have issued a new discount sheet quoting discounts on their various grades of standard and heavy pipe. Any Canadian steamfitter who has not yet secured a copy should write asking for one, mentioning the name of Hardware and Metal in their communication.

Screen Door Spring Hinge.

Columbian Hardware Company, Cleveland, claim for their new wrought steel screen door spring hinge three distinctive points of superiority. The hinge is shapely, clean cut and has the spring covered and protected from the weather, as it should be. Being constructed of wrought steel it is very smooth when finished with a glossy coat of japan. It is composed of five parts only, the two flanges of heavy wrought steel, two steel tips, and a heavy spring made of best oil tempered spring steel wire. It also has the holdback feature. The spring is so coiled and attached as to

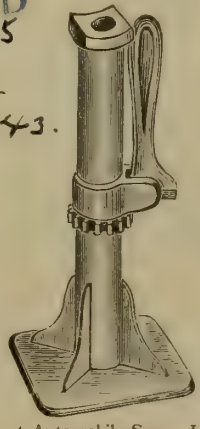
the flanges. Has broad bearing surfaces, and is easy to apply. Dealers are requested to write for free sample hinge.

The Columbian Hardware Company, Cleveland, manufacturers of the above hinge, have just issued an artistic little booklet, Screen Door Fixings, No. 19, describing the Columbian, their Cleveland, another new steel spring hinge for screen doors, their Clover Leaf, Acorn and Columbia Screen Door Hinges, Screen Door Sets, Door Springs, Door Pulls, etc. It may be had for the asking if Hardware and Metal is mentioned.



New Century Stud.

A. B. Ormsby, Toronto and Winnipeg, is sending out to the trade a leaflet describing the New Century Stud for fireproof partitions in all styles of buildings, it being used in connection with metal lath. The construction of the stud is illustrated on the pamphlet and the method of its use is thoroughly described. Copies of the folder will be supplied to any reader of Hardware and Metal who mentions the paper in a letter of inquiry.

COVERT AUTOMOBILE SCREW JACK.

Superiority over all other auto jacks is claimed for the automobile screw jack

Covert Automobile Screw Jack.

manufactured by the Covert Manufacturing Co., Troy, N.Y. The accompanying cut fairly illustrates the apparatus, but its many advantages cannot be fully comprehended and appreciated without seeing the article itself in operation. It is a ratchet double screw lifting jack, easy to operate, and is strong, light, compact, and quickly adjusted. It has no loose parts, and is always ready for immediate use by carrying it in the tool box. The great necessity of having such a powerful jack ready for instant use in an emergency when on the road, is fully appreciated by all automobilists, and every owner of an automobile should possess one of these unequalled jacks. Special attention is directed to the advertisement of the Covert Manufacturing Co., in this issue.

A Message to Paint Dealers

There is not a paint dealer in the Dominion who can afford to ignore our agency proposition. Sherwin-Williams Paints, Varnishes and Colors are known everywhere as trade winners and trade keepers. It's because every one of them is made to be the best that can be produced for its particular uses. They not only bring profit to the dealer in their first sale, but they bring customers back again and again, and are a strong means of establishing steady trade in other lines the dealer carries.

Sherwin-Williams Products get the best trade, and the surest trade. The dealer knows what he can claim for them and recommends them, knowing that they will do what he says they will.

Behind the Sherwin-Williams dealer is the Sherwin-Williams reputation, the Sherwin-Williams aggressiveness, and the Sherwin-Williams advertising system, constantly working to help the agent in every way possible.

Write our nearest office today for detailed information. It will put you under no obligation whatever.

THE ART OF BUYING.

THAT "goods well bought are half sold" is a saying which is as true as it is expressive. Probably if inquiries were made a great number of failures to secure success by retail merchants could be traced to ignorance of this oft-repeated saying. To be "well bought" does not only mean to secure a parcel of goods at a favorable price, as compared with the intrinsic market value, but really conveys a great deal more than that. It means that they are bought just at the proper moment in the right season to secure good condition and freshness—that they are just the description and quality to suit the buyer's particular trade, and further—that they are bought in quantities suitable to his trade requirements, sufficient to meet all probable demand without at the same time leaving a surplus to be jobbed off, thus slaughtering the advantage gained in buying.

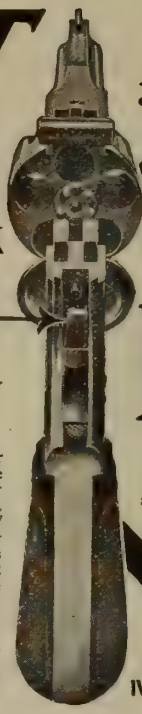
To accomplish this the storekeeper must consider it necessary to acquire all possible knowledge of the conditions surrounding his business. The retail merchant should be the man of information on every point of interest in his district; by this means he is enabled to know when to buy the many luxuries of life which a populace will be inclined to purchase when prospects are animated, or to introduce new articles to take the place of others which are declining or falling into disfavor; to know when and how to stock up the plain necessities of life which the public must purchase even though the district may be in a state of depression.

Thus far as regards his local knowledge; next follows the importance of knowing "where to buy," and a great

deal depends upon the buyer's knowledge of this point. Every commercial man who calls upon him will claim to have the best supply of goods in his particular industry but the buyer must necessarily use a good deal of judgment and discrimination in placing his orders. If he has a very large outlet for a certain article he will probably find it to his advantage to go as near as possible to the "fountain head" for his supply, to save the expense of unnecessary handling, whereas if his demand is only a small one it is not unlikely that he could make better terms with a wholesale dealer. A wholesale dealer often by his large aggregate buying secures an advantage from the manufacturer which it would not be possible to give to the retailer. Moreover, the wholesale dealer can frequently supply the retailer on terms which the manufacturer could not for a moment entertain.

It must not be forgotten that wholesale buying evolves largely on the question of financial manipulation and does not of necessity mean adding a large amount of profit to the original manufacturer's price. Again, the retailer has a much better variety and assortment from a wholesale house than he could possibly get from the manufacturer, and he will often find it to his advantage to spend a few days once or twice a year visiting the various markets, by that means becoming more individually in touch with the working details of the various market prices and gaining a measure of knowledge difficult to obtain under any other conditions. There are, however, a great number of storekeepers to whom a journey from their local district is practically an impossibility. To these men a very excellent means is provided by the various newspapers and journals who take up the many details peculiar to the storekeeper's needs. By reading regularly those papers which deal with his particular lines he can keep in touch as thoroughly with the market fluctuations, and receive as up-to-date information on all points connected with his business, as if he were really at the various markets. "Where to buy" will thus become a much easier proposition.

Another point of great importance to the retailer is to avoid altogether "speculative buying." This is particularly necessary in the case of small buyers. Speculative buying on the part of small traders is much to be condemned, and in most cases leads to disaster. The great thing a small storekeeper should study is the constant turning over of stock which he carries, as by this means alone can complete freshness of goods be secured. The trader may occasionally lose the advantage of a slight movement in the market by adhering strictly to this rule, but the ultimate advantage of having an absolutely fresh and saleable stock outweighs by a good deal the uncertain profit of buying goods in a speculative way.



A point of primary importance to the storekeeper is the "deterioration" of his stock. A successful merchant must of necessity watch his stock that no particular lines are allowed to fall into the background. Any decline in the sale of any particular article should be at once noted and efforts made at once to relieve the stock on hand. The public has grown to a large extent to know pretty well its own requirements and in this connection a storekeeper will always find that "the first loss is the best." If it is necessary to job off a given line, do so immediately it becomes necessary, and before the goods become shopworn and out of date.

Another important factor in storekeepers' buying is the question of "seasons." Care should be taken that as the season closes, so its particular stock decreases, so that on its closing that stock has been well nigh sold out, leaving room for the approaching new season. By this means the locking up of capital is diminished and a storekeeper will be able to keep his banking account well ahead instead of having his capital on his shelves. This is an important point for the retailer who wishes to succeed. Wholesalers are keen to discriminate between the "slow" and the "ready" payer and a little care in regulating the stock in the way indicated will go a long way towards keeping a floating capital, bringing profit to the trader, and maintaining good standing with his wholesaler.

A point which is often overlooked is the necessity for the trader doing his own buying. A storekeeper may have a good man in his employ in whom he has implicit confidence, still it is not wise to allow such a man, however good, the power to send orders for goods simply because the stock has run out. A storekeeper is anxious to get the best terms and the closest prices, and he can only secure this by keeping in close touch with his requirements, and letting the wholesaler know that every order he sends is the work of his personal scrutiny, and that invoices are severely criticized by himself. By this means he will secure the best attention from his wholesaler and he in his turn will be careful to place such a buyer on bottom prices.

A point which often crops up in a country district is the question of "combined buying." This is greatly to be desired wherever possible. Local storekeepers by keeping thoroughly in touch with one another develop a friendly feeling born of mutual interests, and a measure of care is then exercised to bring into the district a volume of goods which whilst being sufficient for the purpose will not be an overstock, besides which the combined buying enables the dealers to obtain their goods on such favorable conditions that they can place them on the respective markets at a moderate figure and at the same time secure adequate remuneration to themselves.

IT IS SAFE

LOOK HERE for the SAFETY LEVER

The hammer cannot hit the firing pin or the cartridge. *When you pull the trigger* (only) this lever rises and carries the blow to the firing pin.

New York Office: 99 Chambers St.

As safe in the home as a kitchen table and just as important. You *may* be so fortunate as to never need the services of a revolver to defend your life, property and the lives of those depending on your protection, but you can't tell—no one of the hundreds robbed and murdered every year suspected that he or she would be the next.

IVER JOHNSON REVOLVERS

are made for your protection—*in every way*. The "Iver Johnson" is the original safety revolver, and the only one with a safety mechanism worthy the name.

IVER JOHNSON'S ARMS AND CYCLE WORKS, FITCHBURG, MASS.

A MUTUAL RELATIVE.

A late story of Irish wit is located in New Orleans. An Irishman boarded a train in which every seat except one was occupied by two people. This seat had as occupants a young sport and a large, shaggy dog. The Irishman stood by the seat expecting that room would be made for him. The young man did not take the hint, but regarded the other, who was poorly dressed, with ill-disguised scorn. At last the Irishman remarked: "That's a foine-looking dog ye have with ye. What breed is it?"

"It's a cross between a skunk and an Irishman," was the sneering answer.

"Shure, then, it's a relative of both of us," was the instant retort.

STOVES AND TINWARE

CLEANING GAS STOVES.

A WAY in which stoves are cleaned by one of the leading gas companies, and done with marked success, is described in the Gas World, the company being practically able to reissue the stoves equal to new. First of all, the cooker about to be renovated is taken to the bench by a fitter, who removes the hot plate float (consisting of brass taps), brass oven cock and door. The remainder of the oven complete and hot plate are placed in a muffle, dimensions 4 feet 9 inches high, 3 feet 10 inches wide, and 4 feet deep, built of fire brick, the floor having fire brick tiles, 3 inches thick, for the oven to rest upon. The door is also of fire brick tiles, iron cases, which is worked by an overhead pulley. The muffle is heated by a furnace underneath in which coke and breeze are used, and it is got up to over 600 degrees. When not in use at night time the furnace is slackened by means of clinkering, so that the muffle is never allowed to get quite cold, which would soon unsettle the bed. The stoves are allowed to remain in the muffle for half an hour, on an average, and are then withdrawn, all dirt, grease, etc., having been entirely removed. Before they get thoroughly cold a stiff wire brush is used on the castings, which then look quite new.

While the process of burning off is going on the fitter takes the door to the polishing room for the bright parts to be polished. In this room there are used emery wheels, buffs, drilling machine and grindstone, worked by a six h.p. gas engine. The enamel plate of the oven door, the float and gas taps, are immersed in a large copper (capacity 120 gallons). This is heated in the same manner as the muffle. In order to make a strong pickle, 28 pounds of strong soap powder (Wiggins & Ryall's) is put into the copper and kept at boiling point while in use, and, as in the case of the muffle, cooled down during the night. The copper is cleaned out and the soap powder renewed twice a week. Having thoroughly cleansed the cooker, the fitter then takes the parts, as already divided, to his bench, and refits them. The taps, with the use of a little metal polish (after having been in the copper) come out splendidly. If found defective they are, of course, replaced. The castings are coated with a special dull black varnish, so as not to cause a smell when the stoves are in use. When fitted, the burners are all tried and allowed to remain alight, so as to give the stove a thorough burning off and testing.

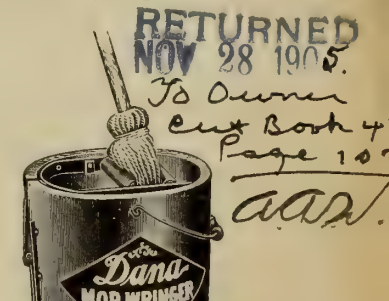
CORRUGATED CONDUCTOR PIPE.

THE greater value of expanding (corrugated) conductor pipe and elbows over the ordinary or plain round variety in a northern climate is a fact not sufficiently appreciated by tinners, roofers, architects and the public in general. It is a well known fact that water expands considerably before entering the state of ice. When ice forms in a downspout or conductor pipe it exercises a great pressure on the walls of the pipe and elbows, so that if these are not of the expanding variety, they must burst by virtue of this pressure. To obviate this the expanding pipe and elbows have been introduced on the market and they have already proved a great success in the United States, where this variety is used almost to the exclusion of the plain round. Aside from their practical value, the corrugated conductor pipe and elbows are more artistic in appearance, the pipe is further offered in lengths of ten feet without a solder joint, while the elbows are made in one piece and galvanized after formation, so that they are absolutely water-tight. The elbows are offered in any material, in all sizes and in any style or angle as may be desired. The cost price is further such that it is a mooted question whether a tinner or roofer can afford to waste his valuable time and material in adhering to the handmade article. Attention is drawn to the advertisement of Ferdinand Dieckmann, Cincinnati, Ohio, in another column. All inquiries will be promptly replied to.

IMPORTATIONS OF TIN PLATE.

THE total value of all tin plates and sheets imported into Canada in the fiscal year 1904 was $1,461,811, against $1,751,507 in 1905, an increase of $289,696. Our imports from Great Britain in 1904 were valued at $1,215,700, against $1,206,906 in 1905, a decrease of $8,794. Our imports from the United States were $246,111 in 1904 and $544,611 in 1905, an increase of $298,490, or considerably more than 100 per cent.

The London Iron and Coal Trade Review has the following interesting note on the British tin plate trade in its relation to Canada:



"The British tin plate trade, apart from the loss of so much of the American demand as has been effected by a prohibitory tariff, remains practically as invulnerable as ever it was. The total tin plate exports of Great Britain are still close on 400,000 tons a year. The total export of all the other countires of the world, the United States included, is less than 20,000 tons. One phase of the tin plate trade that is difficult to be understood is that of the imports into Canada. The Canadian market for British tin plates has not much improved of late years, although in view of the enormous extent of the tinned salmon trade and other branches of food and fruit supply we should expect it to increase materially. The total British exports of tin plate to Canada in 1904 were more than 6,000 tons under the exports of the previous year. This does not entirely correspond with the increased exports of tin plates by the United States in the same year, but there was a material advance of such exports in that year, and it is an easy thing to correlate the two facts. Indeed the American trade returns show that Canada did take a considerably larger quantity of American tin plates in 1904 than in the previous year. This would be a simple problem enough if the prices quoted in the two cases were approximately the same, but the official records of values show that the American prices, in 1904 at all events, were materially higher than the British. We are, therefore, driven to the conclusion that the American plates were taken because of the convenience of the source of supply and by means of the peculiar contracts made by American firms."

Under the circumstances an effort should be made to direct the entire Canadian tin-plate trade to Great Britain.

DANA MOP WRINGER.

THE dealer or jobber handling goods made by the Dana Manufacturing Company, 238 East 9th street, Cincinnati, Ohio, can count on the manufacturer to help move them every time. Everybody connected with the sale of the Peerless Iceland Freezer was helped by the strong advertising it received.

The same most excellent manufacturing organization (except that now it is

Dana Mop Wringer.

in its new factory buildings) and the same thoroughly tested selling organization is putting on the market an article appealing to the same class of people—women in the home—and handled by the same jobbers and retailers. The mop wringer will be properly presented to the women in the home, and as it is easy to operate the Dana Mop Wringer will appeal to every woman.

A distinct advantage the Dana has is that with it you stand in the natural position—both feet rest firmly on the floor all the time, at the start as well as at the finish. Then, too, it is strongly put up and labelled very attractively. Hustling dealers should write their jobbers for particulars.

ADDITIONS TO CLARE'S FOUNDRY

CLARE BROS. & CO.'S stove works at Preston have been largely increased in size during the past Summer by the erection of a large three story storehouse for the storage of patterns and other materials, as well as by a large addition to the foundry. The works are prominently situated on the Main street in Preston, the buildings being constructed of stone and having a

very substantial appearance. The site is adjacent to the river and has a large area. The electric railroad to Galt and Berlin passes the office door, while C. P. R. switches enter the works from behind, one siding bringing the raw material directly to the foundry door and another branch leading to the warehouse on the other side of the works from which shipments are made to all parts of Canada.

A representative of Hardware and Metal recently made a tour of the works and found them to be thoroughly up-to-date, the foundry being very large and capable of an immense output. The assembling rooms and tin shop in which Peninsular Stoves and Ranges and Hecla and Hilborn Hot Air Furnaces and Hot Water Boilers are put together are also roomy shops, giving the employes an opportunity of doing high class work. In the copper and nickeling rooms a dust gathering apparatus has been installed in order that the health of the workmen may be cared for.

Mr. Alf. N. W. Clare stated that the company had had an exceptionally good season and would have no surplus stock to carry over to next year. Preparations are being made for an increased business next season as manufacturers are looking for merchants to stock up early on account of the steadily increasing prices of iron. With the exception of the shut down of about two or three days the foundry will be kept running at its full capacity during the coming Winter.

MORRISBURG'S GOLD BRICK.

Editor Hardware and Metal:—Your various articles on the probabilities of the success of the proposed Canadian Tin Plate & Stamped Steel Co., of Morrisburg, Ontario, have aroused much interest in this vicinitv. The fact is the village has gone "factory crazy." By-laws Nos. 270 and 271 provide for furnishing to the promoter of this scheme 700 h.p. electric, to be delivered at some point within the corporation limits, also an unknown quantity of electric lights, as well as an unlimited quantity of water from the waterworks system, the by-laws to go into force when a lease of 1,100 h.p. of water is had from the Government. The lease so far has not been secured, and the by-laws say that until the lease is made they are null and void. The present lighting plant is taxed to its full capacity, as is the waterworks plant. The Government at present are only willing to lease 750 h.p. of water. It is a well known fact that 750 h.p. of water at the wheels will not generate 700 h.p. electric off transformers at some unknown distance. The debt of the corporation is $80,000. The Government asked the municipality to put up $17,000 to increase the intake at the head of the canal, that they might be able to supply 1,100 h.p., for which they ask the municipality to pay a rental for all time to come of $2,200 per year. They also ask them to put up $13,000, estimated cost of cutting the bank at the site of the proposed power house, and to assume all damages caused to shippers by any break while the work is going on, a definite amount of $30,000 in any event. The estimated cost of building the power house and equipping with machinery is $46,000, not counting one cent for wheel pits, power lines, lines for lighting, engineering expenses (so far expenses have been incurred to the amount of about $3,500), laying of water mains, etc. Careful estimates place the cost at $100,000 to $125,000, added to the present debt of the municipality would mean an indebtedness of from $200,000 to $225,000. The assessed value of the real property is under $500,000, a mortgage of from 40 to 50 per cent. of the assessed value. This is a fair statement of the conditions people are facing when they are asked to take stock in this company, and which the people who own property will face if the scheme goes on. Another phase is, should the power be developed the municipality must pay the Government $2,200 per year rent, and pay the cost of running the plant, wear and tear for 10 years, and not one cent of revenue. Should the scheme prove a failure, the municipality would have the power plant on their hands, and the only security they have for an outlay of $100,000 to $125,000 is the promise of the promoter to pay them $100 in case the mills do not run. These facts it might be well for intending investors to know before they invest in stock. So far the promoters would seem to be building expensive buildings at their own risk, as until the lease of 1,100 h.p. of water is acquired of the Government, the by-laws are null and void. The by-laws are the contract between the promoter and the corporation, and any assignment the promoter can make of his interest in this contract to the Canadian Tin Plate & Stamped Steel Co. must carry the terms set forth above. The promises stated to have been had from the Government by the promoter (unlikely as it would look) of putting a duty on tin plate coming into Canada (if it were done) would benefit the maker of these goods right at the base of supplies, and the proposed plant must go to the wall, as they could not bring coal and steel long distances and compete with mills more favorably located.

CITIZEN."

Morrisburg, Nov. 17, 1905.

DUTY ON ENAMELED WARE ASKED.

A. E. KEMP, M.P., Toronto, appeared before the Tariff Commission at London on Tuesday to plead the case of the association of the manufacturers of enameled steel ware. Mr. John McClary, head of the McClary Manufacturing Co., who introduced the deputaaion, said that in these days, when public opinion was so greatly excited against combinations of all kinds, they congratulated themselves at being out of jail. They were glad of the opportunity to state their case publicly, however.

The manufacture of enameled steel ware had been commenced, and was still being carried on, in the face of great difficulties, said Mr. Kemp, Canadian manufacturers of stamped tinware were forced to undertake this manufacture or go out of business altogether, for the enameled steel ware coming into the country from Germany was crowding their old-fashioned tinware out of the market. Vast sums of money were spent in new plants and in experimenting, and it had been necessary to destroy many thousand dollars' worth of goods after they had been produced. From 1892 to 1905, every dollar earned had gone into wages, real estate, plants and other expenses.

The request to the Commission was that the maximum rate which the new tariff allowed should be imposed on enameled ware. Three reasons were given to support this recommendation: Wages in Canada were higher than formerly. Wages paid by European competitors had decreased. In European countries cost of experimentation in new processes of manufacture, which bore heavily on Canadian manufacturers, was borne by the Government.

Mr. Kemp also recommended to Mr. Paterson's careful investigation the value at which imports of such goods were brought into this country from Austria. The agents conducted their business in a clever way, and this, with the fact that the invoices were made out in the Austrian language, made it difficult for the Customs officials to determine whether or not the proper selling price in the home market was entered in the invoices.

How Association Benefits Trade.

Surrounded by so many difficulties, the manufacturers had formed an association to adopt such methods of manufacture as would lead to the greatest consumption of the wares produced in Canada, with a view of having their plants occupied. There had at no time been any attempt to restrict production, but, on the other hand, the controlling factor, which had determined the policy of the manufacturers, was that the amount of their product which could be sold was capable of being indefinitely increased by cheapening the cost. The interests of the various manufacturers concerned in the association did not lie in raising prices, but in cheapening goods to the lowest price which could produce profit. Only in that way could sufficient goods be sold to enable the manufacturers to pay the high wages now ruling in the business to a large number of employes, which was necessary in order to operate continuously the extensive plants required by modern conditions of manufacture. In making different lines and grades of goods, it was necessary to come to some understanding in respect to the value of each grade, but there had been no pooling of interests. Each factory was run on an entirely independent basis. There was positively no discrimination in prices. A discount was allowed wholesale dealers which allowed them to sell to the retailer at the same rate as the manufacturer.

Protection Wanted on Stoves.

W. M. Gartshore, representing the McClary Manufacturing Co., asked that some specific duty as well as the present ad valorem duty be imposed on stoves. This was to give an additional protection to the Canadian manufacturer against his American competitor.

whose market being much more extensive, was enabled to reduce his cost of production to 15 per cent. less than the Canadian manufacturer. In shipping to the west the American shipper had an advantage of 20 per cent. The extended market also enabled the manufacturer in the United States to change his styles more frequently.

"There is enough competition among Canadian manufacturers to keep the prices down," Mr. Gartshore affirmed. "We are not afraid of the American manufacturer when he is busy, but when he begins to dump his surplus on our market."

"If American manufacturers can lay down goods, duty paid, in the Canadian west as cheaply as we can, they will control the market because of the great advantages they enjoy," said Mr. John McClary.

STOVE ITEMS.

Take the old stoves in exchange. They cannot be valued very highly, but the fact that you will take the old stove at any price will often be the means of making a sale. And then you can clean up the old stove, repair it and sell it for a good figure. The second-hand stove should not be pushed at the expense of the new, however. Only on those who will not buy the new should the old be urged.

The Albion Stove Works, Victoria, B. C., is producing about $1,000 worth of stoves weekly and intends making an effort to secure a share of the business in Manitoba and the Northwest.

TO MAKE THE STORE ATTRACTIVE

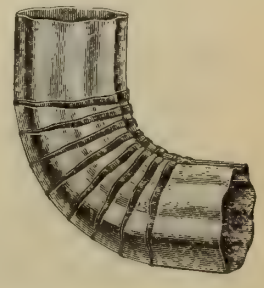
TO make the store attractive should be the supreme aim of every storekeeper. Watch every point of importance and have it right up-to-date.

Have you ever tried color lights for your evening window display? The soft, rich tone added from a deep red or green light makes many striking and very beautiful effects, and can be easily made.

There are a number of simple methods by which you can color your own lights to any shade desired.

One of these is the alum solution. Make a strong solution of alum water, and after carefully cleaning your globe, dip it in the solution. Have a rack to dry them on, and dry slowly and evenly. This gives you the plain white, frosted globe.

By adding cochineal, you have a red solution; tumeric makes a yellow; indigo a blue; a mixture of tumeric and indigo a royal purple.



It may be necessary to dip the globes several times that they may have an even coating.

Another good way, simple and inexpensive, is to color a bottle of mucilage and carefully coat the globes with same.

If the colored lights have not been extensively used in your town, try them at once, and you will be quickly convinced that they are most effective in attracting the crowds that throng the streets in the evening.

FACTS FOR BUSINESS SEEKERS

The man who forges ahead in any business simply makes use of all the little factors which make for business success. Many successful stove and hardware dealers placed the

IMPERIAL OXFORD RANGE

on their floor as soon as we produced it because they recognized it as a winner right at the beginning. As practical men they saw that the Imperial Oxford's exclusive features would have telling effect on competition—saw that such a splendid range was sure to be a universal favorite.

You know that they were not disappointed.

The Imperial Oxford looks a first-class range all over. Its fine appearance compels a nearer acquaintance—the acquaintance that means dollars for you.

The Diffusive Oven Flue, exclusive to the Imperial Oxford Range.

Our Patented Draw-Out Duplex Grate.

Fire-box accurately proportioned, deep and straight.

Our Patented Draw-Out Oven Rack.

These very important features make splendid selling points.

Altogether, the Imperial Oxford is the highest class cooking apparatus manufactured at any price, and the easiest range to sell.

Our strong and systematic advertising helps you.

Our Guarantee Bond goes with every range we sell.

WE also manufacture Steel Plate Ranges, Gas Stoves, Ranges and Heaters, Hotel Ranges, Hot Water and Steam Boilers and Radiators, Warm Air Furnaces and all kinds of cooking and heating apparatus, Plumbers' Supplies.

THE ALLEGED COMBINE PROSECUTIONS.

NOTHING has for some time attracted so much attention in business circles as the proceedings which have been taken in Toronto during the last few weeks against certain mercantile associations and combinations.

Associations, combines or agreements which are created for the purpose of depriving those who are not members thereof of the right to do business are conspiracies. Against such the law should be invoked. But there are associations and associations; agreements and agreements.

Every association is not based on conspiracy. Nor is every agreement. There seems, however, to be a danger of the contrary view being taken. To some people nearly every organization of business men is a dreadful something designed to do evil. The law officers appear to be catching the fever and to have suddenly conceived the idea that where there is an agreement among business men there must be criminal intent.

It is really becoming a serious matter. If there is any suspicion in regard to any organization or agreement let it be investigated, even if the parties thereto are reputable business men, but do not have them haled before police magistrates charged with criminal offences and treated as criminals.

Zeal for the enforcement of the law is a good thing in the representatives of the Crown and in the officers of the law. But that zeal must be governed by wisdom and tempered with justice.

Where there is undue and reckless competition the wisest thing that those suffering therefrom can do, be they retailers, wholesalers or manufacturers, is to come to an agreement to remedy the evil. There is nothing wrong about this. The thing is only an evil when it aims to do an injustice, and some organizations, we are free to admit, are aiming at doing an injustice.

But if business men cannot organize to remedy evils that exist in their midst, where is the line to be drawn? Shall lawyers and physicians be allowed to continue and maintain corporations, or union men fix and regulate the price at which they shall sell their labor? If one is deemed right, why not the others?

It appears to us that the situation demands action on the part of the Federal Government. Where there is clear and unmistakable evidence of conspiracy let the arm of the law be invoked. But otherwise the duty of the hour for the Government is to appoint a commission consisting of a lawyer and a business man or two to investigate the matter. It is better that this should be done, even though the process may be slower than that honorable and reputable business men should be haled before magistrates on charges of criminal conduct.

Injudicious zeal not only often worries and vexes those who are guiltless of criminal offences but defeats the ends of justice as well.

THE TARIFF INQUIRY.

ONE of the best features in connection with the sittings of the Tariff Commission in various parts of Canada is their publicity. The doors are wide open for manufacturers, workingmen, farmers, and faddists, to appear and present their views to the Commissioners. The whole country is made aware—if it cares to follow the evidence—of the reasons for tariff legislation which will ultimately affect the Government. If the Government are in reality affected by any other reasons, then they are not playing fair with the people. This is supposed to be the "brief" upon which they act; and we are all permitted to sit beside them and listen to the making of the "brief." Publicity—where genuine—is a great protector of public interest.

The framing of a "scientific tariff" on, at least, semi-protective lines, is a task of much delicacy and labor. It is impossible to lay down a straightedged theory and then hew away carelessly to that line. The actual condition of affairs in the country must be studied, and the various items fixed with a full knowledge of how they will affect all interests concerned. A tariff item is apt to be a double-edged sword. It may cut two ways. While protecting one industry, it is very likely to increase the expense of another. Consequently, the Government are pursuing the right course in endeavoring to collect all the information they can elicit before sitting down to the complicated and vitally important task of writing a new tariff.

A LEAD PIPE CINCH.

RECENT disclosures in the investigations into the "combines" draw attention to a phase of the rebate system which is worthy of comment. All modern business seems to be conducted in accordance with the Biblical quotation: "To him who hath shall it be given and from him who hath not shall even that which he hath be taken away from him." In accordance with this plan the multi-millionaire rides free upon the railways in his palace car, the politician and special favorite also rides free in the ordinary coaches, the preacher, journalist and commercial man travels at special rates, the general public pays full fare, and the penniless workman in search of a job rides on the bumpers, on the "blind baggage," or in a "side door Pullman," otherwise known as a box car.

Every branch of business is conducted on the basis of quoting the lowest rates to the buyer of the largest quantities. The T. Eaton Company gets a closer rate for advertising than is quoted the small dealer, and so it is all along the line. The custom of business practice has made this one of the fundamentals of modern commerce, and who will gainsay the business equity of charging the smaller buyer more than the purchaser of large quantities?

From this standpoint the rebate system of giving a discount of say 12½ per cent. to a buyer of $1,000 worth of goods and a discount of only 7½ per cent. to the dealer who only purchases $500 worth is perfectly justifiable so long as the fact is openly known to the trade that buyers of certain quantities can secure certain discounts. But there's the rub! The information is not generally known, and it is left to the small buyer to find out for himself what favors his larger competitor is given.

Suppose, for instance, that lead pipe was controlled by an association. The ordinary plumber or hardware dealer who purchases pipe gets the regular discount of 25 per cent., or whatever

the market may make it. But unless he happens to accidentally see a list of preferred buyers, or learns from one "on the inside," he might go on for years purchasing $500 or $1,000 worth of pipe without knowing he was entitled to a rebate of 7½ per cent., or whatever the manufacturers agree upon. The ones on the inside are supposed to keep the information to themselves, and when too many get there the association is likely to disband, only to re-organize soon after on another basis with a more limited preferred list.

It is not the intention of Hardware and Metal to condemn the organization of manufacturers, jobbers, or trade associations of any sort—organization is the keynote of modern industry—nor to criticize the system of giving rebates or regulating prices. But we draw attention to the necessity of trade publicity in trade agreements so that no inequalities may arise, and the small dealer will know how much of any line of goods he must buy before he is entitled to the rebates allowed.

OPPOSITION TO QUEBEC TAX.

IF anything were needed to prove the folly and shortsighted policy exercised in passing the three hundred dollar tax on non-resident commercial travelers for foreign houses, in the Province of Quebec, it would be found in the almost universal opposition it has aroused, not only in Canada but also in the United States and the Mother Country itself.

Not the least serious of the difficulties involved is the fact that the motive and extent of the tax will probably be misunderstood by those who have not had an opportunity of studying it. Indeed, cases of this description have already arisen, the Canadian commercial agent at Leeds reporting that the operation of this tax is causing him no end of trouble with the Yorkshire exporting firms, and is having a very retarding effect upon Canadian trade.

Naturally enough, the average exporter does not readily grasp the difference between a Provincial and a Dominion tax. Laboring under the impression that this tax is imposed by the central governing body, he asks why Canada puts a duty on his goods, and, at the same time, taxes his travelers. He claims that this treatment is unfair and in direct violation of the principle involved in the British Preferential Tariff.

Another difficulty is brought up by British exporters who have resident agents in the Province of Quebec, but have been in the habit of making occasional trips to this country and assisting their agents. These houses pay their agents either salary or commission, and they consider it a great hardship that the heads of their firms, in making these customary trips, would be liable to a large fine.

This subject was taken up at the Autumnal meeting of the Association of Chambers of Commerce of the United Kingdom, recently held in Liege, Belgium. A strong resolution was passed, deploring the action of the Quebec Legislature, and urging His Majesty's Government to lodge a protest with the Quebec Legislature in particular, and with all the colonial Governments, against this practice of taxing British commercial representatives in the colonies.

The British Board of Trade has also put itself on record as being opposed to the tax, claiming that the Quebec tax of three hundred dollars is more onerous than the commercial tax levied by any other country. Norway and Sweden have, indeed, higher taxes per annum, but, as they are payable monthly, they do not prove such a hardship as the Quebec impost, which must be paid in a lump. All the leading countries of Europe welcome foreign commercial travelers.

Canadian boards of trade are also cooperating to secure the abolition of the tax, and the powerful Canadian Manufacturers' Association has passed resolutions condemning it.

In the face of so much opposition, and the approval of but a few selfish firms who are benefited by the exclusion of competition, it would seem that the only popular step open for the Quebec Legislature is to gracefully withdraw the bill.

HIGHER PRICES NEXT YEAR.

READERS of Hardware and Metal are familiar with the condition of affairs in the metal markets, but, if they do not happen to deal in heavy goods extensively, it may not have occurred to them that this strong market will affect them materially.

But so many staple hardware lines are manufactured from raw material, which is constantly advancing in value, that retailers must be prepared to pay much higher prices for such goods next year.

In discussing this question the other day, one of the largest tinware manufacturers in Canada expressed his opinion that all the goods made by his firm would be sharply advanced for next season. He explained that most of the manufacturers put in good stocks of raw material before sheet metals began their recent meteoric rise. And so, owing to strenuous competition, none of the firms involved have withdrawn their prices, nor are they likely to until forced to replenish their stocks. They frankly admit that their present attitude is not one of philanthropy, and as soon as they are forced to come into the market for fresh supplies they will be compelled to advance their own prices to the retailer, as the present strength of the metal market is such as to preclude any possibility of closer quotations for a long time to come.

Furthermore, all articles manufactured from Canada plates, black sheets and galvanized iron, will also be subject to amendments in price as soon as present stocks run out. One of the largest Canadian interests is now stamping all invoices sent out with the words, "We will issue a new catalogue on January 1st, when all prices will be changed."

When confronted by these facts, the progressive retailer will not be long in deciding that he will do well to stock up in anticipation. But he should not overdo the thing. Many a merchant has overloaded himself with unsaleable goods under similar circumstances. Buy now, is our advice, but buy wisely and well.

TIN PLATE OR GOLD BRICK.

MORRISBURG is up against a pretty stiff proposition, according to the letter published on another page written by a citizen of that town. The writer strongly commends the position taken by Hardware and Metal in opposing the proposed establishment of a higher duty on tin plate in order to aid what is clearly a "promoter's enterprise" located at Morrisburg. The Iron Age and other American papers connected with the metal industry have given the promoters considerable encouragement, but the strength of the position taken by this paper is now being generally recognized. As the writer says, Morrisburg has gone "factory crazy," losing sight of everything in the endeavor to get a factory started.

Having failed to look into the probabilities of the enterprise being carried to a successful conclusion before passing the by-law granting the company aid, the town will be lucky if it escapes from the mix-up without a heavy bill to pay. The Government is not likely to grant the aid said to have been promised the company in the shape of a duty on tin plate. Even with it, as we have pointed out, the success of the enterprise is very problematical.

In the United States Investor, a very reliable financial paper published in Boston, an article appeared recently giving a history of the Eastern Trust Company of New York, which, they state, was promoted by Messrs. Allison and Meldrum, the company being liqui-

dated two years after its formation at a loss to the stockholders. This experience shows the necessity of serious consideration of the Morrisburg enterprise by intending investors.

NO MORE FRANCHISES.

ONE of the most commendable moves yet made by the International Waterways Commission in their worthy and laudable investigations in connection with the water power and water levels of the Great Lakes is their recommendation to the Canadian and United States Governments that no further water power franchises using power affecting the level of the lakes be granted, this to hold until the data now being collected be submitted. The following is the text of the resolution :

"Resolved, that this commission recommends to the Governments of the United States and Canada that such steps as they may regard as necessary be taken to prevent any corporate rights or franchises being granted or renewed by either Federal, State or Provincial authority for the use of the waters of the Niagara River for power or other purposes until this commission is able to collect the information necessary to enable it to report fully upon the conditions and uses of these waters to the respective Governments of the United States and Canada. (Signed) J. P. Mabée, chairman Canadian section ; O. H. Ernst, chairman American section."

"Resolved, that in the opinion of this commission no further rights or franchises should be granted or conferred regarding the uses or diversions of the water flowing out of Lake Superior by either the Governments of the United States or Canada until all data and information are in the hands of the commission that may be necessary to enable it to make suggestions for regulating the excess of these waters, or that if such rights or privileges be granted they be subject to any regulations that may be adopted by both Governments. (Signed) O. E. Ernst, chairman American section ; J. P. Mabee, chairman Canadian section."

These should receive the approval of all interested in the industrial and commercial advancement of both countries, as the harboring of one of the greatest assets we possess means everything to the future manufacturing interests in this country.

Many towns in the Northwest are arranging for monthly bargain days. A large number of northwestern merchants made money on this little scheme in 1904. It is certain that 1905 will see the monthly bargain day double in popularity as a trade builder for the town. What are the merchants of your town doing along this line ?

SUCCESSFUL JOBBERS AND SALESMEN.

No. 7.

A FINE type of the clear cut American business man is Mr. James A. Ham, whose likeness is herewith presented and who represents Thos. Robertson & Co., Limited, dealers in plumbers' and steamfitters' supplies, heavy goods and metals, Montreal.

It is no exaggeration to say that Mr. Ham is a born salesman, and early in life he began to cover the Central and Western States in the plumbing and heating business, representing such large firms as the L. Wolff Manufacturing

James A. Ham,
Representing Thomas Robertson & Co., Montreal, in Eastern Ontario and the Ottawa Valley.

Company of Chicago and Jas. B. Clow & Sons of New York.

Five years ago, however, Mr. Ham came to this country and has since then represented Thos. Robertson & Co., Limited, Montreal, one of the largest houses of the kind in Canada. For one year Mr. Ham covered the Province of Quebec with great success, after which he spent a year calling on the trade in the Maritime Provinces. Another year was spent in doing special work, covering practically all of Canada between Windsor, Ont., and Sydney, C.B. For the past two years he has been established in Eastern Ontario and the Ottawa Valley, a territory which he hopes to cover for many years to come.

Mr. Ham is loud in his praises of Canadian buyers, asserting that they have always been very courteous, and that he has enjoyed doing business with them. He looks for a continually increasing trade on his ground.

Looking back over the twenty-five years of his life on the road, Mr. Ham traces with great satisfaction the marvellous development in the plumbing and heating business. Not very long ago a modern farm house was almost unheard of, while to-day there are thousands of them. And as the tendency nowadays is all for sanitary methods, an even greater advance is expected in the plumbing and heating of all kinds of houses in all parts of the country.

An interesting feature of the evolution which the trade has undergone since Mr. Ham became identified with it is the remarkable reduction in prices. To-day he is selling the most up-to-date and best finished product at a cost less than that commanded by the crudest article twenty-five years ago.

Mr. Ham has succeeded because of his magnetic personality and enthusiasm for his work, no less than because he has always been fortunate in representing first class houses.

LAKE NAVIGATION EXTENDED.

AN unprecedented extension of rates for navigation on the upper lakes has been decided upon by the marine underwriters. The customary date of closing is December 5th, but this year, owing to the extraordinarily large crop of wheat produced in the Northwest, which must be moved to the east, insurance rates have been extended seven days, to December 12th.

The thousands of bushels of grain which are still being delivered daily to the elevators at Fort William and Port Arthur total up a quantity which cannot possibly be handled in the customary time.

Were the insurance rates to close December 5th as usual a very serious state of affairs would result, for most of the grain would in that case have to be hauled by the railways all the way from Fort William. But with the extension of rates the steamers will be able to take the wheat to such points as Depot Harbor, Kingston and Buffalo for distribution.

As is to be expected the rates will increase during the extended period per ratio of the regular increase, December 1st to 5th. Only once in the past (four years ago) have the underwriters granted a similar extension, and at that time the period covered was much shorter than it will be this Fall.

More and better use of the show window and less ranting against the tactics of competitors would put some despondent dealers on Easy street.

PERSONAL MENTION

Quebec.

CHAS. BISSELL, representing the Preston Metal Shingle & Siding Co., Limited, Preston, Ont., was in Montreal on Saturday, and called at the office of Hardware and Metal.

O. C. Selby, of Drummond, Ont., took a trip to Montreal this week.

A. Lalonde, tinsmith, of Alexandria, Ont., visited Montreal this week.

W. J. Tucker, general merchant, of Clarence, Ont., visited Montreal recently.

C. Leblanc, hardware merchant, of Joliette, paid a visit to Montreal a few days ago.

Mr. Cruickshank, of the Library Bureau of Canada, Ottawa, was in Montreal recently.

P. Filion, tinsmith, of Ste. Therese, was in Montreal within the past few days on a purchasing trip.

J. J. Sophus, of the firm McLean & Sophus, Montreal, was confined to his home through illness last week.

Mr. Evans, of the Quebec Railway Light & Power Co., Quebec, was in Montreal on business this week.

Geo. Beauchemin, of Beauchemin & Co., machinists, etc., Sorel, visited Montreal during the present week.

P. Lariviere, proprietor of the foundry at St. Ours, came to Montreal one day this week to purchase some supplies.

C. O. Gervais, of C. O. Gervais & Frere, St. Johns, Que., called on some of the Montreal jobbers a couple of days ago.

T. J. Storey, vice-president and general manager of the Canada Carriage Works, Brockville, visited Montreal this week.

L. P. Venne, hardware merchant, St. Catherine street east, Hochelaga, (Montreal,) is greatly extending his premises.

Mr. Bond, of S. Bond & Co., general merchants, Odessa, Ont., was among the business visitors to Montreal during the week.

Jean Roux, proprietor of the saw and grist mill and electric light plant, Ste. Therese, paid a visit to the Royal City this week.
street.

Canavan Bros., Montreal agents for the Josiah Fowler Co., of St. John, N.B., have moved their office from 40 Jacques Cartier square to 13 St. John

C. D. TenEyck, manager of the Canadian office of E. C. Atkins & Co., saw manufacturers, was in Montreal last week, and called on Hardware and Metal.

B. & S. H. Thompson & Co., Limited, Montreal, have received a large shipment of marble on the steamer Jacona, which has just arrived at the local port.

R. H. Cowan, manager of the Traders' Co., Buckingham, and J. E. Vallee, vice-president of the same company, were in Montreal recently in connection with their business.

Walter Sadler, of Sadler & Haworth, manufacturers of leather belting, Montreal, is suffering from an attack of typhoid fever, and is confined to the Glengarry Hospital of that city.

Wilkinson, Heywood & Clark, Limited, manufacturers of paints, varnishes, etc., are opening an office at 300 Notre Dame street west, Montreal, under the management of Francis C. Reynolds.

Caverhill, Learmont & Co., Montreal, are now sending out tags on all their guns, showing that the gun has been inspected and tested. In case of complaint it is only necessary to return the tag.

J. B. Atchison, of Cornwall, has secured the contract for building the Cornwall Electric Railway offices, which are already well under way. The building will be of brick, 70 feet long by 35 feet wide.

F. G. Dixon, of the Hadfield Steel Co., Sheffield, Eng., who has been traveling through Canada for some time, left Montreal for New York and Boston last week. He is on his way home to the Old Country.

Before separating for their various homes, the Canadian travelers of the Sherwin-Williams Co. presented Mr. C. C. Ballantyne, the popular and able manager of the Canadian division, with a diamond scarf pin.

The Locomotive Machine Co., of Montreal, closed for half a day this week out of respect for Albert J. Pitkin, president of the American Locomotive Company, whose funeral was held in Schenectady the same afternoon.

The annual meeting of the Canadian Rand Drill Company was held at Sherbrooke last Friday. A remarkably good record for the past year was shown, and the president was authorized to proceed at once with the enlargement of the plant at Sherbrooke.

Ontario.

Thomas Scott, buyer for A. W. Moore, St. Catharines, is on the sick list.

Wells & Dawson, hardware merchants, Fort William, have dissolved partnership.

Mr. Gilpin, hardware merchant, St. Mary's, has sold out to the St. Mary's Hardware Company.

A. B. Jardine, manufacturer of dies and stocks, Hespeler, was a visitor in Toronto last Friday.

Louis Payette, of Messrs. Warden King & Son, Montreal, was a visitor in Toronto a few days ago.

Andrew W. Mann, of the Canada Brass & Supply Company, London, spent several days in Toronto this week.

Mr. Pedlow, Jarvis, formerly in the hardware business at Hagersville, is looking for an opening to re-enter business.

W. P. Stevens, of the Empire Manufacturing Company, London, was in Toronto during the past week giving evidence at the plumbers' investigation.

S. T. Hedley, of the James Morrison Brass Manufacturing Co., Toronto, was duck-shooting near Oshawa this week. Thirty-two ducks in thirty minutes is the record he made on a former occasion—but he didn't say who held the watch.

B. Gerry has this week sold his hardware and stove business at Wingham to Mr. Bishop and Mr. Brewer, of Parkhill, and the new firm will take possession as soon as stock-taking is completed. Mr. Gerry will go into the coal and wood business at Wingham.

W. R. Higgins, hardware merchant, Peterboro, has a splendid souvenir of an adventure early one morning recently. On his way down to the store he saw a large loon and procuring a rifle he returned and was successful in bringing down the rare bird, now having it on exhibition in his store window.

William L. McCuaig, bookkeeper of the Ontario Lantern Company, Hamilton, died last week after a short illness of appendicitis and complications. The deceased came from Montreal about two years ago with President Grose, and was appointed bookkeeper. He was 26 years of age, unmarried and popular and respected.

Geo. Hubbard, who has been with J. H. Glover, Aylmer, as head clerk in the hardware business for the past few months, has resigned to take a position with G. H. Clark & Co., Niagara Falls. Mr. Hubbard is a first class salesman and his new employers, being keen to recognize his worth, are willing to pay for merit.

Maritime Provinces.

John W. Addison, formerly a hardware merchant at St. John, N.B., died last Saturday of lung trouble.

Lewis J. Hesslein has established himself as a manufacturers' agent at Halifax, N.S. He is well recommended and should make a success of the enterprise.

The first monthly meeting of the Maritime Nail Works since reorganization was held a week ago, among those present being Messrs. Capewell and Williams, of Hartford, Conn., representing the Capewell Nail Works of Hartford, which concern recently acquired a controlling interest in the Maritime Nail Works. At the meeting Fred Elkin resigned his position as secretary of the company, and Stanley Elkin was appointed in his stead.

Western Canada.

Plans are now being prepared for Messrs. McLennan, McFeely & Co. for what will be one of the very largest wholesale warehouses in Vancouver. The building will have a frontage of one hundred and seventy feet on Cordova street, and nearly the same on Columbia avenue. It will cost in the vicinity of $80,000.

MARKETS AND MARKET NOTES

(For detailed prices see Current Market Quotations, page 74.)

THE WEEK'S MARKETS IN BRIEF.

MONTREAL.

Cotton Rope is up to 20c., and **Sash Cord** has been advanced to 30c.

Summerlee Pig Iron is up to $22.50.

Scrap Zinc has advanced to 4c.

Ingot Copper is now quoted at 18½c. to 18¾c.

Tin—An advance is considered imminent.

TORONTO.

Enamelware—New quotations are listed.

Pig Lead — Another advance is considered possible.

Ingot Copper—Prices have increased slightly.

Cement—Lower prices are being quoted.

Sisal Bed Cord—Advanced 5 per cent.

WINNIPEG.

Steel Horseshoes have been advanced 10c.

Shot has been advanced 25c. per cwt.

Canada Plates have been advanced 25c. box.

Quebec Hardware Markets.

Office of HARDWARE AND METAL,
232 McGill Street,
Montreal, November 24, 1905.

ALTHOUGH fine weather is stimulating trade in districts reached by water and would continue to do so until the close of navigation, business generally seems to be quiet. Of course, seasonable goods are moving well, but even in these lines a touch of cold weather and a fall of snow would enliven matters considerably.

Price changes this week have not been numerous, but it has been found necessary to raise the figures on cotton rope and sash cord, the former of which is now quoted at 20c. and the latter at 30c. Strictly half-and-half solder is also much stronger, the minimum price obtainable being now 21c.

The run on skates continues to be phenomenal and that is the line most in evidence in all orders now being sent out from the local warehouses. Sleigh bells, snow shoes, horse blankets and horse shoes are also well to the fore.

Axes—Good orders are being filled, some of the wholesale houses reporting a heavy run. Our prices are as follows: Chopping axes, unhandled, $6 to $9.50 a dozen; double bitt axes, $9.50 to $12 a dozen; handled axes, $7.50 to $9.50; Canadian pattern axes, $7.50 a dozen.

Handles—The volume of business is largely determined by that of the foregoing article. We quote: Axe handles, No. 3, $1.25; No. 2, $1.50; No. 1, $1.90 a dozen; adze handles, 34 inch, $2.20 a dozen; pick handles, No. 2, $1.70; No. 3, $1.50 a dozen.

Sewing Machines—The nearness of the Christmas season is quickening sales. We quote: Hand sewing machines, $11 each, net; complete machines, with stand, $18.00 and up, according to quality.

Lanterns—There is a fairly good turnover in this line. Our prices are: Cold blast, $4.50; No. 0 Safety, $5.00.

Rivets and Burrs—Trade has been somewhat quiet, owing largely to the unseasonable weather. Everybody is awaiting the advent of snow. We quote: **Best iron rivets, section, carriage and wagon box, black rivets, tinned do., copper rivets and tin swede rivets, 60, 10 and 10 per cent.; swede iron burrs are quoted at 60 and 10 and 10 per cent. off new lists: copper rivets with the usual proportion of burrs, 45 per cent. off; and coppered iron rivets and burrs in 5-lb. carton boxes at 60 and 10 and 10 per cent.; copper burrs alone, 30 and 10 per cent., subject to usual charge for half-pound boxes.**

Screws — Business is fair. Our quotations are as follows: Round head, bright, 82 1-2 per cent.; **flat head, bright, 87 1-2 per cent., brass, round head, 75 per cent.; brass, flat head, 80 per cent.**

Bolts and Nuts—These goods are moving fairly well, though no remarkable flutter is evident in the market. We quote 3-8 and smaller, 60 to 10; 7-16 and larger **55 to 5.**

Horse Nails—This is one of the most active lines at present. We are quoting: C brand, 40, 10, and 7 1-2 per cent.; M.R.M. Co., 55 per cent.; P.B. brand, 55 per cent.

Wire Nails—Business is keeping up well at the price as recently advanced. We quote from $2.10 to $2.20 per keg, f.o.b., Montreal.

Cut Nails—Price remains at $2.20 per keg, f.o.b., Montreal.

Horse Shoes—A fine turnover is reported this week. We still quote: P.B. **New Pattern, base price, $3.50 per 100 lbs., M.R.M. Company latest improved pattern iron shoes, light and medium pattern No 2 and larger, $3.65. No. 1 and smaller, $3.90, snow pattern, No. 2 and larger, $3.90, No. 1 and smaller $4.15. Light steel shoes, No. 2 and larger, $4: No. 1 and smaller, $4.25; featherweight, all sizes, No. 0 to 4, $5.60. Toeweight, all sizes, 1 to 4, $6.85.** Packing—Up to three sizes in a keg, 10c. per hundred pounds. More than three sizes, 25c.

Sporting Goods—Rifles and shot guns are still selling in good numbers. Ammunition is also being well inquired for. Our quotations are as follows: **Canadian made shells, black, 25 and 5 per cent.; smokeless, 25, 10 and 5 per cent.; American centre-fire cartridges, list net; sporting and military, 10 per cent. advance on list; primers, $2.05 per thousand; American loaded shells, 20 per cent. discount; B.B. caps, $2.00 per thousand; standard shot, $6.50 per hundred lbs.; chilled, $7 per hundred lbs.; buck and steel, $7.50 per hundred lbs.; ball, $8 per** hundred lbs. We quote discounts 10 per **cent. on shot, f.o.b. Montreal, Toronto, Hamilton, London, St. John and Halifax.**

Building Paper—Business continues moderate and the slack season is being warded off by the continued fine weather which is very favorable to building operations. Prices remain as before.

Cement and Firebrick—Nothing unusual has transpired during the week so far as cement is concerned. Small jobbing orders are still to the fore, as all contractors are doing their utmost to complete the work now under way before the weather breaks. There are no large inquiries however. A tremendous movement in fire brick has been going on, the leading interest in Montreal reporting exceptionally large sales during the past couple of months. Our quotations are as follows: $1.80 to $1.90; Belgian, $1.60 to $1.90 per barrel; **ex-store, American, $2 to $2.10 ex-cars: Canadian Portland, $2 to $2.05. Firebrick, English and Scotch, $17 to** $21, American, $30 to $35; White Bros.' Eng. cement, $1.80 in bags; $2.05 in barrels in round lots.

Coil Chain—We give prices: 5-16 inch, $4.25; 3-8 inch, $3.75; 7-16 inch, $3.55; 1-2 inch, $3.35; 9-16 inch, $3.30; 5-8 inch, $3.20; 3-4 inch, $3.05; 7-8 inch, $3.00; 1 inch, $2.95.

Skates—This is perhaps the best selling hardware line just now. All the local jobbers are flooded with orders for nearly all grades and sizes. Prices range from 25c. to $2.50, according to quality.

Sleigh Bells—Sales are keeping up well, although colder weather would no doubt stimulate trade in this line. We quote the following prices: Back straps, 30c. to $2.50; **body straps, 70c. to $3.50; York Eye bells, common, 70c. to $1.50, pear shape $1.15 to $2; shaft gongs, 20c. to $2.50; Grelots, 35c. to $2; team bells, $1.80 to $5.50; saddle gongs, $1.10 to $2.60.**

Horse Blankets—Our prices are: Jute, unlined, $4.50; 3-4 lined, $9.50; full lined, $12; 16-oz. Hessian, unlined, $6.50; 3-4 lined, $11.50; full lined, $14, and up to $24; Kersey blankets, $9 to $21; all wool, $24, $30, $48 and $60.

Snow Shoes—The supply is becoming rapidly exhausted and prices have been advanced on some grades. We quote from $15 to $35 per dozen pairs, according to quality.

Ontario Hardware Markets.

Office of HARDWARE AND METAL,
10 Front street east,
Toronto, November 24, 1905.

NO changes in prices have taken place during the past week and business is reported to be very active, shipments of heavy goods being especially large, the movement being active on account of the desire to stock up before the winter freight rates come into force. There is much talk of combines amongst the retailers, but all are so busy at present that trade is not effected in any way by the proposed investigation into agreements between manufacturers, jobbers and retailers.

Cutlery and silverware continue to meet with large sales and there is also considerable doing in shot guns, rifles, cartridges and ammunition. Skates are also commencing to move more actively and sleigh bells, leather and cotton mitts are also being caled for in increasing quantities.

Axes and Handles—Dealers are sorting for the winter trade and shipments are quite large.

Cutlery and Silverware — Christmas business continues active and many sorting orders are being given.

Sporting Goods—Shotguns and ammunition are still being called for.

Lawn Mowers—Orders are not being placed so much at present as a month ago, most Fall orders being booked.

Washing Machines—Trade is very active and dealers report increasing sales.

Chain—Cow chain is being included in most orders being placed. Our quotations are: 1-4 inch, $6.50; 5-6 inch, $4.45; 3-8 inch, $3.85; 7-16 inch, $3.70; 1-2 inch, $3.55; 9-16 inch, $3.45; 5-8 inch, $3.35; 3-4 inch, $3.25.

Extension and Step Ladders—Manufacturers are busy and prices firm. Our quotations are as follows: Step ladders at 10c. per foot for 3 to 6 feet, and 11c. per foot from 7 to 10 feet ladders. Waggoner extension ladders, 40 per cent. off.

Galvanized Wire—Prices are steady and business fair. We still quote: $2.42 1-2 f.o.b. Cleveland.

Barb and Coil Spring Wire—The average business for this season is being done.

Wire Nails—Prices are quite firm, some dealers quoting $2.10 and some $2.15.

Cut Nails—A very satisfactory volume of business is reported. Quotations are: $2.40 per keg f.o.b. Toronto.

Horse Nails—Blacksmiths' orders are very satisfactory and shipments are large.

Horseshoes—Trade continues brisk prices firm. We quote: P.B. base, $3.65; "M.R.M. Co., latest improved pattern" Iron shoes, light and medium pattern, No. 2 and larger, $3.80; No. 1 and smaller, $4.05; snow No. 2 and larger, $4.05; No. 1 and smaller, $4.30; light steel shoes, No. 2 and larger, $4.15; No. 1 and smaller, $4.40; featherweight, all sizes, 0 to 4, $5.75; toe weight, all sizes, 1 to 4, $7.00. If shipped from factory 15c. less.

Horse Blankets—Business in halters, girths, horse blankets and similar goods is active.

Skates and Sleigh Bells—Some sleigh bell orders are still being sent in and skates are in more active demand.

Screws—The market is very firm with prices unchanged.

Rivets and Burrs—Trade is active with prices unchanged.

Bolts and Nuts—Quotations are very strong, but no advance has been made as yet.

Cordage—Quotations continue as follows: Red Cap, 11 1-2c.; Tiger, 10 1-2c.; Standard, 9 1-2c. Cordage: manila, 15c.; British manila, 11 1-2c.; sisal, 10 1-2c.; double lathyarn, 10 1-2c.; single lathyarn, 10c.; sashcord, "Hercules," 30c. to 32c.; "Star," 36c.; cotton twine, 3-ply, 24c.; 4-ply, 29c.; calking cotton, 16 1-2 to 17c.; cotton waste, colored, 6 3-4c.; white, 9c.

Cement—Prices are weakening, although light stocks will not allow them to decrease much. Our prices are: For carload orders f.o.b. Toronto, Canadian Portland, $1.90 to $2.00; American Portland, $1.90 to $2.00. For small orders ex warehouse, Canadian Portland, $2.10, American Portland, $2.10.

Firebrick— Business is more active. Prices continue as before: English and Scotch firebrick, 27c. to 30c.; American low-grade, 22c. to 25c.; high-grade, 27 1-2c. to 37 1-2c.

Building Paper—Shipments are lively owing to the heavy call for winter goods. Prices are the same.

Hides—The local market for hides is settling to more normal conditions and it is generally believed that the winter season, whilst expected to maintain somewhat of a higher character, will be more on a natural basis.

Reports from Chicago still denote great eccentricity in that market. Prices are still maintained on a high parity, but have developed a weaker character since our last report, but there is no new feature which is expected to influence the Canadian market. It will be seen that our prices are revised on a basis more according to that ruling, previous to the late fluctuations of the domestic trade.

The American Radiator Co. is to open a branch factory at Hull, England.

Port Stanley and Chippewa, Ont., are considering the question of installing waterworks systems.

Canadian Metal Markets.

QUEBEC.

Office of HARDWARE AND METAL,
232 McGill Street,
Montreal, November 24, 1905.

IRON and steel products are now so much in demand that it is becoming daily more difficult to fill orders. Consuming manufacturers are even offering premiums for prompt deliveries, and without great satisfaction at that.

Local stocks of tin are being depleted rapidly with the result that the market has toned up greatly during the past week. Even now, importers are quoting a price which would leave jobbers an impossibly small margin at present figures, if they had to replenish their supply. Favorable prices are now being quoted on American tin plates for deliveries the first half of next year, and considerable quantities have been booked.

Copper is a little stiffer, the price quoted last week holding good now, only for large quantities. Pig lead, as was noted in our "Last Minute Metal Marakets last week, is being quoted 5c. higher than the old prices. Even this is considered a fairly easy price under existing conditions, the probability being that still further advances will be made before long.

The pig iron situation shows little change. All shipments for this year are now in, and considerable quantities are piled on the docks waiting to be carted to the various warehouses. Of course, nearly all the large consuming interests are stocked up for the winter, but satisfactory sales are, nevertheless, being made right along.

Orders from points which can be reached by water are being hurried forward on the last boats of the season, and buyers everywhere will soon be at the mercy of the railways' winter rates.

Canada Plates—Good orders are being received and prices are kept firm. We quote as follows: 52's, $2.50; 60's, $2.55; 75's, $2.60; full polished, $3.60; galvanized 52's, $4.00; 60's, $4.25.

Copper—The tone is greatly strengthened this week and previous figures are now only obtainable on large lots. We are quoting: Ingot copper, 17 3-4c. to 18c.; sheet copper, 24 3-4c.

Ingot Tin—Importers have once more advanced their prices so that as soon as jobbers are forced to replenish their stock they will find themselves unable to sell at existing prices. In the meantime, however, we are quoting from 36 1-2c. to 37c. per lb.

Pig Lead—Another sharp advance over last week's figures has brought the price up to $4.10 to $4.20 per hundred lbs.

Boiler Tubes—We quote: British and American tubes, 1 1-2 inch, 8 1-2c.; 2 inch, 8 1-2c.; 2 1-2 inch, 10c.; 3 inch, 12c.; 3 1-2 inch, 15 1-2c.; 4 inch, 20c.; 5 inch, 45c. Price per foot net.

Pig Iron—The situation is not exciting, although sales are quite satisfactory for the season. Most of the foundries throughout the country are stocked

for the winter and orders from now on will be merely for small lots. We give the following prices:

"Dom.," No. 1.	$19.50 to $20.00	delivered	Montreal.
Usual difference in price for lower grades.			
Ferrona No. 1	$19 50	delivered	Montreal.
" No. 2	19.00	"	"
" No. 3	18 50	"	"
" No. 4	18.00	"	"
Londonderry	19.50 to 20.00	"	"
Carron No. 1	22.50	"	"
" (special)	21.50	"	"
Summerlee No. 1	22.50	"	"
Clarence No. 1	19.50	"	"
" No. 3	19.00	"	"

Tool Steel—We are quoting: Colonial Black Diamond, 8c. to 9c.; Sanderson's, 8c. to 45c., according to grade; Jessop's, 13c.; Jonas & Colver's, 10c. to 20c.; "Air Haradening," 65c. per lb.; Conqueror, 7 1-2c.; Conqueror High Speed Steel, 60c.

Merchant Steel— No further changes in price have been made, but the strong tone of the market is being steadily maintained. Sleigh shoes, $2.07 1-2; tire, $2.22 1-2; spring, $2.75; toecalk, $2.77 1-2; machinery iron finish, $2.17 1-2; reeled machinery steel, $2.75; mild, $2.07 1-2 and upwards; rivet, $2.07 1-2 and upwards. Net cash 30 days.

Cold Rolled Shafting—We quote: Cold rolled shafting, 3-4 inch to 7-16, $3.75 per 100 lbs.; inch and a half to 3 inch, $3.50 per 100 lbs.

Galvanized Iron—Trade is normal and prices remain unchanged. Our quotations are as follows: Queen's Head, 28 gauge, $4.10; 26 gauge, $3.85; 22 to 24 gauge, $3.60; 16 to 20 gauge, $3.35; Apollo, 28 gauge, $4; 26 gauge, $3.75; 22 to 24 gauge, $3.75; 16 to 20 gauge, $3.40; Fleur-de-Lis, 28 gauge, $3.85; 26 gauge, $3.60; 22 to 24 gauge, $3.35; 16 to 20 gauge, $3.10; Comet, 28 gauge, $3.85; 26 gauge, $3.60; 22 and 24 gauge, $3.35; 16 to 20 gauge, $3.10; Bell brand, 28 gauge, $4.20 to $4.25; Gorbal's "Best Best," 28 gauge, $4.10, "Windmill Best," 28 gauge, $3.95; Sword and Torch, 28 gauge, $4.05; in less than case lots 25c. extra.

Black Sheets — We still quote as follows: 28 gauge, $2.25; 26 gauge, $2.20; 22-24 gauge, $2.15; 19-20 gauge, $2.15; 8-10 gauge, $2.30.

Antimony—Business is rather quiet at present and concessions are obtainable on the following prices: 14c. to 14 1-2c. for Cookson's.

Tin Plates—The market is very strong yet. Favorable prices are now being given on American tin plates for delivery first of next year. We quote: Cokes $3.75, charcoal $4.00.

Terne Plates—The demand remains as before and the price is steadily held at $6.75.

Ingot Zinc—The market is firm with an upward tendency. Present price is 6 3-4c. to 7c.

Sheet Zinc—The prices we have been, and are still quoting, are considered pretty low and jobbers will certainly be forced to advance as soon as their stocks run out. It is impossible for them to purchase new stocks and make any margin at the present quotations, which are as follows: In casks, 7 3-4c.; sheet, 8c.

Bar Iron—No further change has taken place in the conditions and we are still authorized to quote $1.97 1-2, f.o.b. Montreal.

Old Material—Little change is to be remarked in the market this week. The only price amendment is in scrap zinc, which is now quoted at 4c. instead of 3 3-4c. The rubber situation is still somewhat uncertain, but reliable quotations are expected to be soon forthcoming. We quote: Copper wire, 13 3-4c.; light copper, 12 3-4c.; heavy red brass, 11 1-2c.; yellow brass, 9 1-4c.; light brass, 6 1-2c.; lead, 2 3-4c.; zinc, 4c.; machinery cast scrap, $13; wrought scrap, $12: stove plate scrap, $9; mixed rags, 75c. to 90c. per 100 lbs.; old rubbers, 7 1-4c. to 7 1-2c.

ONTARIO.

Office of HARDWARE AND METAL,
10 Front Street East,
Toronto November, 24, 1905.

INGOT copper is the only metal which has been advanced in price during the week, although tin is very firm and an advance is looked for in a few days. Jobbers are endeavoring to stock up as heavily as possible before navigation closes, but it is difficult to secure stocks of several lines of metals.

There is an active movement in the United States to transfer all the steam railroads into electric lines and sentiment in this line is becoming stronger in Canada. This will mean enormous consumption of iron and copper and the work will necessarily be spread over a long period of years. While there will be little difference in the iron industry by the change, the use of electric power will mean an enormous increase in the consumption of copper, very little of which is now used by the steam railroads. The increasing use of copper in this direction is something which must be reckoned with in forecasting prices of this metal in the future.

Pig Iron—Prices continue firm and light stocks are reported by the mills on the market. We quote:

Middlesboro, f.o.b., Toronto	$22 50
Hamilton, No. 1, at furnace	18 50
" No. 2, "	18 00
Midland, No. 1, "	18 50
" No. 2, "	18 00
Radnor, at furnace	31 50
Londonderry, at furnace	17 00

Bar Iron—Business is very lively with manufacturers asking time to make shipments. We quote $2.00 base, f.o.b. Toronto, with discount of 2 per cent. net cash.

Tin Plates— Demand is active with prices very firm.

Galvanized Sheets—Prices are firm in the outside markets, the demand continuing active locally.

Brass— Conditions are unchanged, business being active. Discounts continue at 10 per cent.

Lead—Little business is offering owing to high prices. We quote as follows: Pig lead, $4.25 per 100 lbs., and bar lead $4.80 per 100 lbs.

Zinc Spelter—The market is more active with prices unchanged. We quote: 7c. per lb. for foreign and 5 1-2 to 5 3-4c. per lb. for domestic.

Copper—An advance of 25c. is reported owing to advances on outside markets. We quote: Ingot copper, $17.75 per 100 lbs., and sheet copper, $21 per 100 lbs.

Antimony—The demand is fair, with stocks in hand light.

Old Material—The high prices for new metals is creating a better demand for old material and prices are strengthening. Dealers' buying prices as follows: Heavy copper and wire, 13c. per lb.; light copper, 12c. per lb.; heavy red brass, 11 1-2c. per lb.; heavy yellow brass, 9c. per lb.; light brass, 7 1-2c. per lb.; tea lead, $2.40 per 100 lbs.; heavy lead, $2.75 per 100 lbs.; scrap zinc, 4c. per lb.; iron, No. 1 wrought, $8 to $8.50, No. 2 wrought, $3 to $5; machinery cast scrap, $13; stove plate, $10; malleable and steel, $5; old rubbers, 7c. to 7 1-4c. per lb.; country mixed rags, 75c. per 100 lbs.

Coal—No change is reported, prices being steady. We quote: Anthracite in cars at bridges, grate, $5.25 per gross ton; egg, stove and nut, $5.50 per gross ton; pea, $3.90 per gross ton.

Standard Hocking, soft coal, in cars, f.o.b. at mines: Lump, $1.35; 3-4 inch, $1.25; run of mine, $1.05; nut, 90c.; N.P. and S., 60c.; slack, 40c.; box cars 10 cents per ton additional.

Youghiogheny soft coal in cars, bonded at the bridges: 1 1-4 inch, $2.45; 3-4 inch, $2.35; mine run, $2.35; slack, $1.80 to $1.90.

For Manitoba, British Columbia and Maritime Provinces markets see pages following.

UNITED STATES METAL MARKETS

Advance proofs furnished HARDWARE AND METAL by The Iron Age, November 23, 1905.

THE bookings of finished iron and steel continue exceedingly heavy in all lines and thus far this month are nearly up to the rate of October. That month was a surprise after the extraordinary record of September, which was not very far from double the actual capacity of the mills. It is quite unprecedented that there should be such a volume of buying at this season of the year, when usually the works are eager for Winter work.

The strain in all directions is tremendous and prices are kept down only by main force. During the week the leading interest advanced tin plate 10 cents a box and the sheet makers put up prices on sheets $2 per ton for black and galvanized. It is understood that the American Sheet & Tin Plate Company has now 92 per cent. of its sheet capacity and 70 per cent. of its tin plate capacity in operation.

Conferences among the wire manufacturers have resulted in a retention of current values, and in the plate trade an interchange of opinion has led to the continuance of the policy of holding prices uniform. Premiums, however, are paid with increasing frequency.

In the structural trade the inability to make deliveries is still the conspic-

uous feature. The new mill at Chicago is running, but only on single turn.

A feature of the markets recently has been the demand for structural material and for plates from Canada, and quite a good business has been done in that direction.

There is increasing evidence of a shortage of pig iron for steel making purposes. The Steel Corporation has purchased only a moderate quantity since the sellers are holding their metal at an advance. Other interests, however, have taken several lots in the Pittsburg district, among them being a steel plant in the Philadelphia district which has bought from 6,000 to 8,000 tons at $17 at Valley furnace.

In the east a demand for a considerable quantity of basic pig has made its appearance, due to the retention of metal in the Pittsburg district, which thus far has been delivered to the east. It is hoped that some accumulation toward the end of the year, when the steel works naturally slacken their output, while the blast furnaces continue in operation, may lead to a very much desired easing up of pig metal.

There have been some sales of Virginia basic pig to western steel works during the past week which netted the furnaces $16.50.

Among the rail sales is that to the Illinois Central Railroad, involving 34,000 tons; Colorado Southern, New Orleans & Pacific, 17,000 tons; Beaumont, Sour Lake & Western, 9,000 tons, and the Alaska Central, 5,000 tons.

The representative of the leading producers of foreign structural material reports that thus far the purchases for importation foot up to 40,000 tons, the price having advanced during the movement from £5 1s to £5 10s., c.i.f. Deliveries are made in six weeks.

The principal transaction in domestic structural material during the current week has been the closing of a contract for 30,000 tons of bridges for the Harriman roads. Thus far this month the American Bridge Company has booked 60,000 tons.

LONDON METAL MARKETS.

From Metal Market Report, November 22, 1905.

Pig Iron—Cleveland warrants are quoted at 53s. 3d, and Glasgow Standard warrants at 52s., making prices as compared with last week 6d lower for Cleveland warrants and 4d lower for Standard warrants.

Tin—Spot tin opened firm at £153 5s., futures at £152 5s., and after sales of 240 tons of spot and 160 tons of futures closed firm at £153 7s. 6d for spot and £152 7s. 6d for futures, making price as compared with last week £1 5s. higher on spot and 17s. 6d higher on futures.

Copper—Spot copper opened steady at £76, futures £74, and after sales of 400 tons of spot and 400 tons of futures closed easy at £75 12s. 6d for spot and and £73 12s. 6d for futures, making price as compared with last week 7s. 6d higher on spot and 17s. 6d higher on futures

Lead—The market closed at £15 8s. 9d, making price as compared with last week, 2s. 6d higher.

Spelter—The market closed at £28 10s. making price as compared with last week unchanged.

MINES AND METALS.

Canada's mineral production has increased 600 per cent. since 1886.

* * *

Capital invested in Canadian mining amounts to $104,000,000.

* * *

Nickel was accidentally discovered in Sudbury in 1882. Canada has produced $35,000,000 worth of nickel.

* * *

Yukon placers have produced more gold than any other placer mines in the world.

* * *

The Granby Company, Grand Forks, B.C., have placed orders for important additions to their crushing and hoisting plants. These additions consist of a mammoth ore crusher of the Farren Bacon jaw type. The capacity of the crusher will be 1,400 tons to 8-inch cube every ten hours, and the shipping weight of the machine will be 120,000 lbs., the heaviest single piece weighing 75,000 lbs. The Granby Co. already have two crushers of this same size and type in operation. The capacity of the electric hoist will be a load of 10,000 lbs. Both the crusher and hoist are being built by the Jenckes Machine Co., Limited, Sherbrooke, Que.

* * *

The new zinc reduction works at Frank, Alberta, commenced operations last week. A large quantity of ore was retorted and made into pig zinc, the ore coming from the Goodenough mines at Kaslo, B.C.

CANADA'S ZINC RESOURCES.

Mr. Alfred C. Garde, M.E., Nelson, B. C., one of the members of the Commission recently appointed to inquire into the zinc resources of British Columbia, has just returned from the west. He states that the report of the Commission is in course of preparation. They have been at work for the last two months and a half investigating the zinc deposits, the quality of the ore, and method of treatment. Their work has been so satisfactory that it will be continued by the Department next Spring. The price of zinc has greatly increased of late years owing to its much wider use in the various arts and for electrical and galvanizing purposes.

There are deposits in Ontario which will probably be investigated later. In British Columbia large shipments were made this year, but the producers are at a great loss through having to ship the ore to the United States or to Europe for treatment. It is hoped that soon this can be done in Canada.

Speaking of the general mining outlook in British Columbia, Mr. Garde said the copper industry was steadily going ahead. The Boundary country was producing largely and profitably. The Granby Company, which had the biggest plant, was one of the most encouraging industries of the Province. The lead mining had improved materially through the aid of the bounty.

The hardwareman should always find time to see to the window advertising. Of what profit is to to spend time and money on printing ink and neglect the show window?

British Columbia Trade News

Vancouver, Nov. 17, 1905.

PLANS for improvement of that portion of False Creek, as the inner harbor of Vancouver is called, are being formulated by the trades and industries committee of the Vancouver City Council. The object to be attained is by dredging and filling in, to secure a large frontage on water not now available for vessels. This frontage, which is all on property owned by the city, would then be leased for factory and other sites, the rentals being devoted to paying off interest and sinking fund charges on the bonds which would have to be issued to cover the cost of the proposed improvements. This matter has engaged the attention of the city for many years, and now that the Dominion Government is engaged in preparing a plan for the improvement of that portion of False Creek over which it has jurisdiction, the other work is likely to be undertaken. A very valuable asset will be practically created for the city from what is now useless tide flats, while inducements to industries will be very important.

* * *

There has been some satisfactory result attained after long months of work in the Southern Alberta oil fields by the Western Oil & Fuel Co., whose expert, R. M. Yeager, announces that on well No. 3, in camp No. 3, they have at last struck oil in paying quantities. The depth at which the oil was struck has not been announced, but the quality is said to be excellent. There are a number of companies operating in the same locality, and all have been handicapped by the want of transportation facilities, there being neither railroads nor trails in.

* * *

Though debarred by injunction in the courts from working at the eastern portal of its tunnel, eight miles west of Midway, in the Boundary district, the Great Northern is pushing operations from the western portal, and by the time the tunnel is completed it is their hope that they will have concluded expropriation proceedings by which they will have access to the eastern end. Grading west and north of the disputed territory is being pushed rapidly up the valley of the Similkameen River to Princeton and Hedley, and east of the tunnel the grade is within a few miles of the site, but the legal difficulties have stopped operations at that point. The first round was won by the Great Northern in the courts on a misunderstanding, and it looked for a time that armed opposition from the men employed by both railways would lead to a serious clash. Trouble was averted by the discovery that the order of the court did not give the Great Northern the right to cross the disputed land. The railway then withdrew its men to await successful expropriation proceedings, which, of course, the C.P.R. will oppose at every cost.

* * *

The attention of the City Council of Vancouver is being engaged by the submitted reports and plans of the city engineer, Mr. Clements, for the new high level system, to serve the higher

portions of the city. The cost, which would of course cover a period of three or four years in being expended, contemplates raising three-quarters of a million of dollars. Alternative water supply has been applied for by the city, in view of the difficulties in negotiating for exclusive control of the watershed of the Capilano River, from whence the present supply is obtained.

* * *

An immense scheme of reorganization of the whole water system of the city of Victoria is another large public improvement contemplated. The city proposes to go to Goldstream, the source of supply for the Esquimalt water works, but some difficulties as to securing a record of the water in opposition to the Esquimalt Company and the B. C. Electric Railway, which uses the same water for power to operate the street car lines and lighting plant in Victoria, have delayed action. The Victoria city fathers look to action next Spring. The proposed remodelling of the system in the city will give a thoroughly up-to-date and capable water works, and the cost will be half a million dollars at least.

* * *

To-day the Boundary Falls smelter, near Greenwood, is being blown in, after a thorough overhauling. Large dumps of ore from the Phoenix camp have been sent down to the smelter, and with liberal supplies of coke on hand prospects for a busy season at this plant are bright. The Boundary Falls smelter is about two miles from Greenwood. At Greenwood the British Columbia Copper Co.'s smelter of 600 tons daily capacity is also running full blast, and the directors are considering doubling its capacity, as the ore being raised at their mines cannot be handled. The big smelter at Grand Forks is running full time since its enlargement, so that the quantity of ore being reduced in the Boundary district alone is very satisfactory.

* * *

The new tannery of the Fraser River Tannery Co., opposite New Westminster, is to be ready for operation in a short time. A very large and complete plant has been erected. American capital is interested.

* * *

The Waterous Engine Works, of Brantford, has been awarded the contract to supply a new 800-gallon fire engine for addition to the Vancouver city fire department's equipment. This was awarded after competitive bids had been twice called for. The price was $5,000, the Canadian Fire Engine Co. having bid $5,200. On the first bids the Waterous people were $5,700, but were high, and as the fire chief reported in favor of the Waterous engine the new bids were called.

* * *

Lumber trade in Vancouver and on the Coast generally is very active for the time of year. Naturally cars are scarce on the Coast until after the wheat has been moved forward from the prairie provinces. Local demand is still very good, while exports, both foreign and to the Canadian market, are very satisfactory. Recent increase of $1 per thousand in the price may not be the last. Logs have jumped up until $8 and $10 per thousand may be the ruling figure, the former being now what is asked by loggers. As there is constantly increasing demand for lumber it is quite possible that next Spring when the logging operations are run full swing it will not be possible to keep all the mills going. There are a number of mills, especially on the Fraser River, not yet running full capacity. These are soon to be ready and will add their quota to the demand for logs.

* * *

Hardware circles are fairly quiet, demand for building material not, of course, being so heavy now. Prices are steady and firm. The recent advance of 10 cents in bar iron base has had a corresponding stiffening effect on all iron manufactures. The stocks are, of course, largely from the Old Country, in iron and steel, bar, sheet, plate and wire, but most manufactured goods from eastern manufactories.

* * *

Mr. J. S. Larke, Canadian Trade Commissioner to Australia, who sails to-day on the Moana, very pointedly wanted to know why British Columbia had been neglecting the Australian market of late. Lumber from Puget Sound and other manufactures which might be shipped from British Columbia were being sent by Washington State.

* * *

Owing to the request of General Freight Agent Greer of the C.P.R. for an additional thirty days time, after having asked for ten days, in which to file an answer, the wholesale trade and other shippers are left in a quandary as to how to act. They feel that the recent promulgation of new rates from Montreal and eastern points to Edmonton, giving that city all or more than the ordinary privileges, has shut out the chance of the coast cities selling goods there and competing.

FUR MARKET REPORTS.

THE raw fur season of 1904-05 which closed last May might be considered, on a whole, as being one of the most satisfactory and successful ever experienced by the trade. This applies to every one in the trade from the trapper clear through to the consumer. Different articles had their ups and downs, which may always be looked for, but the ups had decidedly the best of it. The unusually good demand for furs last season was a natural healthy demand, which accounts for prices being so well sustained up to the present time, and forecasts such bright prospects for the coming season of 1905-1906.

Even in the face of all the good conditions existing, and the very bright prospects for another good season ahead, there never was a season where the trade should watch itself so closely as seems imminent this season.

There is no denying the fact that furs as a whole are on a reasonably high level of value, and that the consumer, which is the public at large, is willing to buy furs at the present reasonably high basis, both in this country and in Europe. The success of the coming season does not seem to depend upon the natural conditions, as the natural conditions are all right. Stocks are lighter than usual in nearly all kinds; there has been a natural growth in the demand for furs, both in the climates where the severe winters call for them as a necessary wearing apparel, and in others where fashion demands them as a necessary part of a lady's wardrobe. With good crops at home and abroad the people will have money to spend and will spend it for furs up to a certain limit. The termination of the Russian-Japanese war should bring Russia, one of our best customers, more actively into the market. Again we say every condition is favorable and propitious. About the only thing that could spoil a good season, judging from the present conditions, is the over-zealousness of the trade. Should speculation and reckless buying occur in attempts to carry values to too high a plane, reaction and declines are almost sure to result. Our advice, "Don't kill the goose that laid the golden egg." The public, upon whom at last we depend to buy each season's catch, has done and will continue to do its part if not imposed upon. We advise country collectors to buy freely, using caution in buying the Summer and early caught skins. Buy on basis of present values and ship to market frequently, as nothing posts you so well as actual results. We don't consider it advisable to speculate this season. Buy freely on market basis and ship frequently and you will be sure to have a good season. Prices are starting in pretty high, but if not carried to extremes we predict another record-breaking fur season.

UNIQUE PLAN.

ONE hardware dealer in a town across the line takes the following somewhat unique method to get in touch with the various special lines his business makes it necessary for him to handle, and secure an occasional good advertising suggestion with very little trouble. Each employe at the time he is hired is required to file a paper stating what he has worked at in his past life and what the line of business into which his place of birth first brought him. These files are frequently consulted, and when some special line of advertising is to be prepared the assistance of these clerks is called for. For instance, when the copy is being made up for the sale of plows or some other line of agricultural machinery, all clerks who have been reared on a farm are called upon to give in a list of the chief difficulties which beset the farmer in the use of the plow; its usual defects; the points where, under special conditions, it seems to fall short of satisfactory service. If the subject is builders' hardware the carpenter's son is at a premium; for drillers' tools, a clerk who has some personal knowledge of practical well-drilling is a bonanza. The idea is to get the advertising written from the standpoint of the consumer, one of the difficult things for the manufacturer or dealer to do. It takes the man who has been on the job himself to know just what his successors want and what they frequently find; and no one else is on the job of plows quite so well as the fellow who has stood between the handles "when the wind was strong."

IN THE LEAD!

In the **prompt** shipping of

Plate Glass

it is a well-established fact that we have constantly been in advance. The demand for our Plate is evidence that our efforts have been appreciated and has been such that to-day we have the **largest stock** and **plant** for handling same in Western Canada.

Quotations for Plate delivery sound at your station by wire or mail on receipt of specification.

G. F. STEPHENS & CO.
LIMITED
WINNIPEG, CANADA

Hardware and Metal Conditions in Manitoba.

(Market quotations corrected by telegraph up to 12 a.m. Friday, Nov. 24, 1905.)
Office of HARDWARE AND METAL
Room 511, Union Bank Building,
Winnipeg, Man.

CONTINUED mild weather is allowing a long open season on the lakes and a great amount of heavy goods is being brought in by lake and rail routes. Business is active, both in shelf and heavy goods and collections are reported as greatly improved. There are several price changes to note this week and all are advances. Steel horseshoes have been marked up another 10 cents. Shot has advanced 25 cents per cwt., and Canada plates command 25 cents per box more than they did last week.

Game Traps—There is still a brisk demand for game traps. Prices are maintained steadily as follows:

H. & N., discount	50 and 5 p.c.
Victor, "	66⅔ p.c.
Newhouse, "	35 p.c.
Bear	$7 each

Lanterns—Wholesale prices are steady at the following figures:

Cold blast lanterns	$4 75 per doz.
Coppered cold blast lanterns	6 75 "
Cold blast dash "	7 25 "
Lift Lanterns	4 25 "

Bluestone—As mentioned last week, the price for 1906 delivery has been announced to be $5.75 per cwt.

Wire—Prices are steady. We quote:

Barbed wire, 100 lb		$3 00
Plain galvanized	6 to 8	3 39
"	9 2 50	2 90
Plain galvanized	10	3 50
"	12	3 10
"	13	3 20
"	14	3 90
"	15	4 45
"	16	4 60
Plain twist		3 00
Staples		3 50
Oiled annealed wire	10	2 96
"	11	3 02
"	12	3 10
"	13	3 20
Oiled annealed wire	14	3 30
	15	3 45

Annealed wires (unoiled) 10c. less.

Horseshoes—There has been a further advance of 10 cents on steel horseshoes. Prices are now quoted as follows:

Horseshoes, iron, No. 0 to No 1	$4 65
No. 2 and larger	4 40
Snow shoes, No. 0 to No. 1	4 90
No. 2 and larger	4 65
Steel, No. 0 to No. 1	5 00
No. 2 and larger	4 75

Horsenails—Discounts are as follows: "C" brand, 40, 10 and 7 1-2 per cent., "M" brand and other brands, 55 and 60 per cent. Add 15c. per box.

Wire Nails—The price has been steady since the recent decline to $2.60 per keg.

Cut Nails—Price, $3.00 per keg, base price. None selling because of the low price of wire nails.

Pressed Spikes—An advance of 25c. per keg went into effect the first of the week. Prices are quoted as follows:

Pressed spikes,	¼ x 5 and 6	$4 60
" "	5-6 x 5, 6 and 7	4 25
" "	⅜ x 6, 7 and 8	4 10
" "	7-16 x 7 and 9	4 00
" "	½ x 8, 9, 10 and 12	3 90
" "	⅝ x 10 and 12	3 75

Screws—No change in price. Demand continues brisk at following unchanged discounts:

Screws, flat head, iron, bright	85 and 10 p.c.
Round " "	80 p.c.
Flat " brass	75 and 10 p.c.
Round " "	70 and 10 p.c.
Coach	70 p.c.

Nuts and Bolts—Discounts are unchanged. We quote:

Bolts, carriage, ⅜ or smaller	60 and 5 p.c.
" 7-16 and up	55 p.c.
Bolts, machine, ⅜ and under	55 and 5 p.c.
" 7-16 and over	55 p.c.
Bolts, tire	65 p.c.
Bolt ends	55 p.c.
Sleigh shoe bolts	65 and 10 p.c.
Machine screws	70 p.c.
Plough bolts	55 p.c.
Square nuts, case lots	3c. discount.
" " small lots	2½c. "
Hex " case lots	3c. "
" " smaller lots	2½c. "

Rivets—Discounts continue as follows:

Rivets, iron	60 and 10 p.c.
Copper, No. 8	29½
" No. 12	33

Coil Chain—Unchanged in price. We quote:

Coil chain, 3-16 inch	9.25
" ¼ inch	7.20
" 5-16 inch	5.20
" ⅜ inch	4.60
" 7-16 inch	4.45
" ½ inch	4.30
" ⅝ inch	4.10
" ¾ inch	4.00

Shovels—Discounts on spades and shovels continue 40 and 5 per cent.

Harvest Tools—Discounts are now 60 and 5 per cent.

Axe Handles—Quoted as follows:

Axe handles, turned, s.g. hickory, doz.	$3 15
No. 1	1 90
No. 2	1 60
Octagon extra	2 30
No. 1	1 60

Axes—Prices are quoted as follows:

Bench axes, discount off list	40 p.c
Broad " " "	25 p.c.
Royal Oak, per doz	$ 6.25
Maple Leaf, "	8.25
Model "	8.50
Black Prince "	7.25

Butts—The discount on wrought iron butts is 70 per cent.

Churns—The discounts from list prices are 45 and 5 per cent.

Chisels—Quoted at 70 per cent. off list prices.

Auger Bits—Discount on common auger bits is 65 per cent.

Blocks—Discount on steel blocks is 35 per cent. off list prices; on wood, 55 per cent.

Fittings—Discounts are quoted as follows:

Wrought Couplings	60 p.c.
Nipples	65 and 10 p.c.
T's and elbows	10 p.c.
Malleable bushings	50 p.c.
Malleable unions	60 p.c.

Grindstones—The price is now 1 3-4c. per lb.

Fork Handles—The discount is 40 per cent. from list prices.

Hinges— The discount in light "T" and strap hinges is 65 per cent. off list prices.

Hooks—Prices are quoted as follows:

Brush hooks, heavy, per doz	$8.75
Grass " per doz.	1.70

Draw Knives—The discount is 70 per cent. from list prices.

Rules—Discounts are 50 and 10 per cent.

Washers—On small quantities the discount is 35 per cent.; on full boxes it is 40 per cent.

Wringers—Selling at following prices:

Royal Canadian, per doz	$30.05
R. B., per doz	34.07

Files—Discounts are quoted as follows:

" Arcade "	75 p.c.
" Black Diamond "	60 p.c.
" Nicholson's "	62½ p.c.

Building Paper—Business is still very active in all lines of building paper. We quote:

Joliette, plain	40c.
" tarred	65c.
Cyclone, plain	55c.
" tarred	80c.
Anchor, plain	55c.
" tarred	65c.
Pure fibre, plain	60c
" " tarred	80c

Tinware, Etc.—We quote again as follows:

Tinware, pressed, retinned	70 and 10 p.c.
" " plain	75 and 2½ p.c.
" pieced	30 p.c.
Japanned ware	37½ p.c.
Enamelled ware, white	45 p.c.
" Famous	50 p.c.
" Imperial	50 and 10 p.c.

Cordage—The price has been steady since the advance noted last week. We quote:

Rope, sisal, 7-16 and larger, basis	11 25
Manila, 7-16 and larger, basis	15 75
Lathyarn	11 25

Solder—Quoted now at 21c. per lb. with concessions for large quantities.

Corrugated Roofing and Siding—Prices are still quoted as follows:

ROOFING.

(Lengths 3, 4, 5 and 8 ft.)

	Painted	Galvanized
28 gauge	$2 85	$3 90
26 "	3 10	4 15
24 "	3 80	5 40

(Any lengths under 4 ft. 10c. per square additional.)

	Painted	Galvanized
28 gauge pressed seam	$3 00	$4 20
28 " "V" crimp	2 95	4 15

SIDINGS.

(Plain brick, rock face brick or stone 17¼ x 23.)

	Painted	Galvanized
No. 1 78 to the square	$3 00	$4 30
" 2 69 " "	2 75	3 90
" 3 55 " "	2 40	3 60

(Large sheets 28 in. x 60 in.)

	Painted	Galvanized
28 gauge	$3 00	$4 05

BEADED CEILING.

28 gauge, painted red	3 10

Vises—Prices are quoted as follows:

" Peter Wright," 30 to 34	14½c. per lb.
" " 35 to 39	14c. "
" " 40 and larger	13½c. "

41 to 50 "	8.40
51 to 60 "	9.45
61 to 70 "	10.50
71 to 80 "	11.55
81 to85 "	12.60
86 to 90 "	14.75
16 to 95 "	17.30
6 to 100 "	

Operations on the big power works dam at Fort Frances will be pushed all Winter. Work on the retaining wall across the canal is progressing steadily and the big coffer dam below the falls is slowly being extended and filled. The tower for the Fort Frances end of the big cable way which will span the river has been raised and is being braced and strengthened, and the one for the Minnesota side is framed and ready to raise. The tower already in position is 106 feet in height.

BUSINESS METHODS AND SUGGESTIONS

THE extension of credit in a retail establishment is obviously wholly dissimilar from the methods employed in a wholesale house, although the definite objects are practically the same. The class of goods is different, the amount purchased varies, and the class of customers who purchase are not as a rule acquainted with business methods, whereas the customer of a wholesale house is constantly brought in touch with ideas and systems employed by such houses.

Cash vs. Credit.

A large number of retail stores are running business to-day on a strictly cash basis, and, although this is a much safer and more satisfactory way, where a store has the monopoly, and can afford to be independent, still a certain amount of trade will undoubtedly turn to the store which carries the monthly account. It should be the aim of such a store to secure as large a number of credit accounts as possible, provided only first-class accounts are opened.

When an account has been opened with a customer it is only natural to expect to hold the trade of that customer. He will more easily make purchasest at a store which carries his account, whereas if he were obliged to pay prompt cash it would be immaterial to him where his supplies were obtained, provided quality and price were satisfactory, the result being that he would go from store to store to purchase his requirements, as no one store would have any hold upon him.

The percentage of loss on account of bad debts must be kept down and collections watched even more carefully than in a wholesale business.

The Customer.

The customer looks at the price and quality of the goods purchased, he also expects courteous treatment, promptness and accuracy on the part of the clerks employed—a good account may be, and is no doubt very often lost simply through lack of interest displayed on the part of the salesmen, especially in some of our large stores.

Extending credit in a retail business is more of a personal matter than in a wholesale house; the person in charge should be in close touch with every department of a retail business.

The credit man should be tactful, diplomatic and be able to read human nature and recognize the fact that he is not dealing with business men.

A retail merchant who desires to have his bad debts reduced to a minimum should be familiar with the conditions which exist in the community in which he is extending credit, such as strikes, removal of factories employing a large number of men, etc. He should also take into consideration a customer's position, source of income, prospects, etc.

The merchant may often find it a very difficult and delicate task to obtain the necessary information about a customer which he desires, but by a personal conversation, certain facts may be drawn out skillfully and tactfully, so as not to offend a prospective customer. Perhaps the buyer is well known in the community in either a professional or a business way, but if information cannot be obtained in any other way, the commercial agencies will furnish it.

The clerk who sells a buyer about to open an account or who is unaware that such a buyer has an account already, should use a great deal of tact and common sense so as not to offend a customer with inquiries as to his account, as a good account may be turned away at once.

Collection.

A limit should be placed upon the purchases of doubtful customers, so as to have the account brought before the notice of the person in charge just as soon as that limit is reached.

It is not only necessary to use judgment in regard to opening a new account, but the account must be watched carefully afterwards.

Collecting of overdue accounts is a delicate business, as if a customer feels that the retailer is dunning him for an account, he will, although perfectly good for it in most instances, feel inclined to buy elsewhere until he has paid off the account.

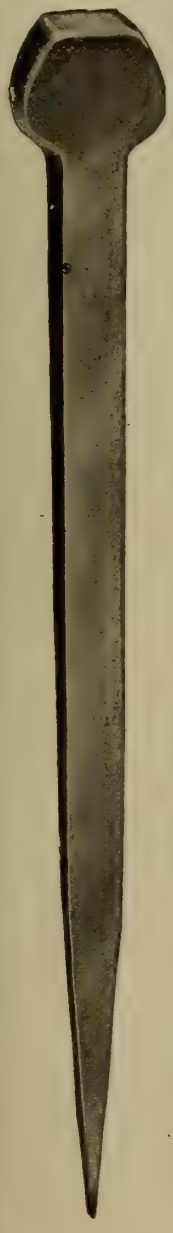
Accounts should be rendered exactly in accordance with instruction, i.e., using the title Mr. or Mrs. as the case may be.

Overdue Accounts.

Overdue accounts should be collected promptly for three reasons:

First—The loss through "bad debts" will be reduced to a minimum.

Second—The customer will feel more inclined to buy if his account is paid, but the request for settlement must be made judiciously.



Third— It requires capital to carry overdue accounts, which often means a considerable loss, through bank interest.

A FRIENDLY CHAT.

ONE thing every storekeeper ought to do occasionally is to call his clerks together and say to them something like this:

"You and I want to make more money in this store. But in order to do that we must do more business. Now I want suggestions from all of you, about anything you think we can do to increase trade and gain new customers. Or, if you see any waste going on that we might save, I want you to tell me. I want each one of you to keep your eyes open, use your brains, and think of something that will improve this business for your sake and my sake. If there is any one of you who does not care to try to improve this business, we don't want him here. I would rather get rid of him and divide his salary among those who do care. Now as soon as a suggestion comes to your mind, let us have it, and we will see if we cannot all of us make more money."

THE "C" BRAND

On a box of Horse Shoe Nails with our name, means to the purchaser that he shall receive the best, and "made in Canada."

Forty years is a long period of manufacturing experience in the production of Horse Nails. You get the benefit of it all, when you buy the "C" brand.

The best material known or used by any maker in the world for making Horse Nails, is Swedish charcoal steel nail rods. We use this exclusively.

The "C" brand nails will stand more hard work and outlast any "cold process" nail made in the world—bar none.

Don't compare prices, compare quality. The best costs the most to produce, and always sells for the best price.

Remember, that the recollection of the quality will remain long after the price has been forgotten.

Your orders and preference for the "C" brand respectfully solicited.

CANADA HORSE NAIL COMPANY

Established 1865. MONTREAL

Did you ever stop to think how many **HARDWAREMEN** read any one of our large city dailies? If you have a business for sale or wish to engage a clerk you will not be content to have your advertisement seen by men in any one locality.

HARDWARE AND METAL is not a Montreal, Toronto or Winnipeg paper. It is an **ALL CANADIAN NEWSPAPER,** and reaches each week practically all the men engaged in the Hardware, Stove and Tinware and Plumbing Trades from the Atlantic to the Pacific.

Your message will be carried **quickly.** HARDWARE AND METAL is mailed Friday, and all subscribers in Ontario should receive their copy on Saturday. Travellers invariably count on reading the paper each Saturday.

If you want anything in which the Hardwareman or Plumber would be interested, insert a **Want Ad.** in HARDWARE AND METAL.

RATES: 2c. per word First insertion
1c. " Subsequent insertion

THE TARIFF COMMISSION

AT the closing sessions of the Tariff Commission in Toronto last week and the opening meeting in London, divergent views were presented, deputations of working men and farmers appearing to protest against higher protection on the articles consumed by them while more manufacturers desiring to off-set foreign competition joined in the demand for higher duties. The Massey-Harris Co. came into direct conflict with the farmers who had asked that the duty on farm implements be lowered, the company's representatives asking the commissioners to "even up" all the duties on that branch of industry to 25 per cent. This would effect mowing machines, harvesters, reapers, cultivators, ploughs, harrows, horse rakes, seed drills, manure spreaders, and weeders, which are now taxed 20 per cent. Other requests included one that the duty on extra parts be raised from 20 per cent. to 45 per cent., equal to United States tariff. Senator Jones maintained that the increased duties would not result in any higher price to the users in Canada.

Mr. Thomas Findley discussed the request for a duty on cream separators, saying the present eight or ten factories could now supply the Canadian market. The importations had increased from $216,000 in 1900 to $674,000 last year.

Discontinue the Rebate.

Some readjustments of duty were asked by Mr. John Cowan of the Ontario Malleable Iron Co., Oshawa, but the largest question he raised was a request that the rebate on malleable iron duties on goods exported be discontinued.

Mr. Cowan asked that the duty on castings in the rough and upon malleable iron and steel castings be made 30 per cent. instead of 25 per cent.; on hardware for builders' use an increase from 30 per cent. to 35 per cent. and that the duty on malleable iron castings for agricultural implements be increased from 20 per cent. to 25 per cent. He complained that the industry in Canada is not as prosperous as it should be and the product last year was 17,000 tons, while the capacity of the factories was 25,000 tons.

A general duty of 40 per cent., instead of 25 per cent., was asked for pulleys of all kinds for transmission of power, grain elevator machinery, transmission machinery, and finished iron work of all kinds, by Mr. C. F. Wheaton, manager of the Dodge Manufacturing Co., to meet the American competition.

A request that steel balls be put on the free list until the demand warrants their being made in Canada was made by Mr. W. J. Murray, of the Chapman Double Ball Bearing Co., and Mr. T. A. Russell, manager of the Canada Cycle & Motor Co., large users of that article.

Mr. Donald J. McKinnon asked for an increase in duty from 25 to 35 per cent., or a specific duty per horse-power, on gas and gasoline engines, together with the transfer to the free list of such parts imported as are not made in Canada. The imports in 1904 of $127,235 grew to $194,074 in 1905. The output of the seven factories in Canada might be $1,250,000.

Want Sheet Copper Free.

A protest against the request for a duty on sheet copper was made in a petition read by Mr. W. E. Booth, on the ground that there is no copper mill in Canada, and one could not be economically established, and a duty would seriously handicap their industries, which used it as a raw material, the total consumption being 1,000 tons yearly. The following companies signed the petition: McClary Manufacturing Co., London; Thomas Davidson Manufacturing Co., Montreal; E. T. Wright & Co., Hamilton; Metal Shingle & Siding Co., Preston; Pedlar Metal Roofing Co., Oshawa; Galt Art Metal Co., Galt; Kemp Manufacturing Co.; Coulter & Campbell, Metallic Roofing Co., Fletcher Manufacturing Co., N. L. Piper Railway Supply Co., Booth Copper Co., Toronto; Winnipeg Ceiling and Roofing Co., Winnipeg; and McFarlane and Douglas, Ottawa.

Mr. Thomas Dexter,
Of H. S. Howland, Sons & Co., Toronto, one of the representatives of the Canadian Wholesale Hardware Association at the recent convention at Washington, D.C. [Photo received too late for last week.]

Mr. Thomas B. Lee, general manager Rice Lewis & Son, as a merchant, asked that the articles which are admitted free for manufacturers for use in their factories be free to others who want to import them.

Messrs. E. Fielding and Edwin Hill presented petitions from some twenty glass dealers in Toronto, London and Montreal, asking for the abolition of the British preference on common window glass, and the imposition of a duty of 10 per cent., or a graded scale from 15 to 50 cents per 100 feet, instead of 15 per cent. and 7 per cent. preference as now. The reason assigned was that the only British firm exporting to Canada is Pilkington Bros., who, with jobbing offices in Canada, put the other dealers at a disadvantage, who have to go to other countries and import at double the duty. Mr. George Kerr and Mr. Frank Baylis, for Pilkingtons, replied that their firm sold to anyone, and they would take orders now.

A. W. White, of George White & Sons, manufacturers of farm implements, complained that American manufacturers had been shipping machines invoiced for Customs purposes at 35 per cent. off the cost. These goods were billed to their branch houses throughout the States at 35 per cent. off the regulation selling price, and these transactions were quoted as bona fide sales when they were only shipments to agents, to whom the goods were not really sold. Mr. Paterson said that he would instruct his department to make a searching inquiry.

Joe Chamberlain's Screws.

Screws shipped from the factories of Joseph Chamberlain in Birmingham and entered into Canada under the preferential tariff caused the Coulter Screw Company of London to appeal to the Tariff Commission for free raw material. The general duty on this commodity was 35 per cent., but having to pay a specific duty of $7 a ton the protection was lowered to 15 or 20 per cent. All had gone well until the introduction of the British preference, when the British manufacturers, particularly those in Birmingham, had become alive to the Canadian market and were threatening to wipe out the Canadian manufacturer. The remedy suggested by Mr. Coulter was that certain lines of iron which he could not secure in Canada and which were in fact made in only one American mill be put on the free list.

C. H. White, of the London Rolling Mill Co., asked that if the duty on steel billets, his raw material, which is now $2 a ton, were raised, the duty of $7 on iron and steel bars be increased. The present duty was satisfactory, and he asked no change. They were protected against unfair American competition by the dumping legislation, and they were willing to concede the preference to the British manufacturer, as he is hampered by distance. Mr. White also asked for a lower duty on bituminous coal.

Mr. Wm. Scarlet, for the pump-makers, asked that 10 per cent. be added to the present duty of 25 per cent. on steel pumps.

Mr. G. F. Mann, representing the cement dealers, protested against the duty imposed last July on cement bags. They thought the 25 per cent. duty on cement quite sufficient.

The handle manufacturers of London, St. Thomas, Strathroy, and Tilbury asked, through Mr. John Stevely, for a better grading and classification of handles imported from the States, so as to prevent them being entered at an undervaluation.

Valves and Castings.

An increase from 30 to 45 per cent. was asked by the Kerr Engine Company of Walkerville, during the sittings of the Commission at Windsor, on brass and iron valves and castings, as competition with the United States is very keen. There is a possibility of greater competition from Great Britain, where labor is cheaper than here, but the United States worker can do an equally big business in a much smaller area. Mr.

H. O. Kerr, who presented the petition, complained of freight discrimination, and quoted the following rates obtained to-day on iron valves in less than carload lots: Detroit to Toronto, 18 cents; Walkerville to Toronto, 30 cents; Detroit to Montreal, 31 cents; Walkerville to Montreal, 44 cents.

PACKING ACCOMMODATION.

A MONTREAL jobber recently showed a representative of this paper a series of interesting correspondence with one of their customers relating to the non-arrival of a small purchase. The customer wished the goods sent to a neighboring house to be enclosed with a package from that firm for shipment. The trouble arose through the fact that the latter house would give no receipt for the parcel and the former one did not feel justified in leaving unreceipted a valuable purchase. Annoyances of this kind arising from enclosures are of almost daily occurrence and jobbers have wrestled to adjust the problem satisfactorily. The practice of sending goods to be packed to other houses is of untold benefit to retailers in effecting numerous savings. The manufacturing and jobbing trade hardly regard this practice as an evil and are constantly imposed upon by unreasonable demands. The desire to accommodate their customers has led to concessions of a ridiculous nature. The extra expense entailed is considerable. Larger cases, increased cartage, more help, time and labor are necessarily entailed. In these days of changing style and quick demand retailers often defeat their own object by insisting upon this practice, as delays and misunderstandings are altogether too frequent.

A rigid inquiry throughout the trade fails to reveal any house that refuses to give this accommodation to its customers. However, the methods employed in tracing these inclosures vary greatly and some concerted action is essential to lessen the difficulty. In general the impression prevails that since the goods are not from its own house there need be no attention paid to their proper handling. In many cases there is also no system in checking these goods.

The chief obstacle in the way of effectively performing this service is the refusal to give a receipt by more than one reliable house. This policy is extremely short-sighted, as a receipt practically relieves the firm receiving the goods from all further responsibility if the wording is clear. If trouble arises through non-arrival of the goods to the customer the firm has only to look up its receipt and trace the shipment to prove that it is not responsible.

Ignoring the inconveniences caused by this practice in the matter of delayed shipments, etc., the advisability of a receipt deserves earnest attention. The chief objection to giving a receipt lies in the fact that the firm has no knowledge of the contents or value. There are various way of getting round this difficulty, one receipt in use having a double form which allows space to give names of the firms from whom the goods were received and to whom addressed, as well as a rough description of the goods. Following this comes the important part, which reads as follows: "Contents and value unknown. It is distinctly understood that we are not to be held responsible for the safety of the above in any way beyond enclosure with our shipment." Another large jobbing firm uses the following: "As the above parcel is forwarded by us merely for the convenience of customers, it is understood we are not responsible for its contents or safe delivery." Another jobbing house which does not sign for parcels has a triple method of checking in and out and all records can be immediately found. Where care in the receiving and packing rooms is practiced, and an inventory of all packages on hand is made at short stated intervals, there is little likelihood of any confusion arising. In fact one house states that since 1903 they have never lost a parcel.

The favorite method in large houses is to give a receipt from a duplicate book when the goods are received. This is then entered and the goods are transfered to the packing room, where a receipt is given to the receiving room. The packing room enters the acknowledgement of their arrival in an enclosure book, stating who from, who for, and the date received. Further, the list of all parcels inclosed is entered upon the bottom of the invoice.

Jobbers and manufacturers seemingly regard this accommodation to their customers as an obligation for them to buy the bulk of their purchases from the house furnishing such accommodation. The fact remains, such favors cost a great deal of money and cause vexatious delays and needless unpleasantness. It is not conceded that the practice can be eradicated, but retailers are serving their own interests when they do not make an imposition of such a favor. A regular practice of this kind should be condemned by all concerned. An occasional accommodation is all right, but there is a limit to all good things.

THE OLDEST WORKING GRINDER.

A REPRESENTATIVE of Hardware and Metal, while recently going through the works of George Butler & Co., Sheffield, England, noticed an old man at work despite his 83 years of age. The old fellow, James Sadler by name, commenced razor grinding when 13 years of age, and is still hale and hearty enough to spend four or five hours daily at his favorite work, three sons, one being 58 years old, assisting him at his wheel.

When he first entered the cutlery trade Sadler worked for Sir Frederick Thorpe Mappin, and went to Messrs. George Butler & Co. some 30 years ago, working there ever since. As may be guessed, he has ground thousands and thousands of razors in his time. When he gets into a reminiscent mood he has some interesting tales to tell. The great Sheffield flood is very fresh in his memory, and on that disastrous occasion he saw a stable full of dead bodies, The trades outrages, too, are well remembered by this veteran, and he was personally acquainted with most of the men who were punished for the despicable deeds they committed. In his younger days Sadler traveled by the old stage coaches, and he is one of those veterans who can boast of having journeyed in this manner as well as by water and rail. When he was 80 years of age a few of his friends entertained him to supper and presented him with a walking stick.

siding

Our Sheet Metal building materials work architectural wonders.

"Metallic" Sidings have all the advantages of brick or stone, none of the disadvantages of wood and many points of superiority over other metal sidings which the dealer will not be slow to recognize.

"Metallic" Sidings are very light, strong and rigid; never sag, warp or buckle, no knots or splits, as with woodless paint, required. They can be had in galvanized or painted steel, simulating stone or brick most perfectly. They resist fire and last a lifetime. Price low, quality unequalled.

OUR NEW $10,000 CATALOGUE We have just issued the most complete Catalogue ever offered to the Metal Trade. It is a veritable encyclopædia of all that's practical and beautiful in the Art Manipulation of Sheet Metal. Book contains 440 pages, superbly bound and illustrated. We send it free upon request, to any builder, contractor or dealer of responsibility.

THE METALLIC ROOFING CO.
OF CANADA, Limited
(Established Twenty Years)
Toronto **Winnipeg**

We also manufacture:
"Eastlake" Metallic Shingles
"Metallic" Ceilings and Wall Plates
"Metallic" Cornices, Skylights and Ventilators
"Metallic" Sheet Metal Fronts
"Impervia" Fireproof Windows
"Empire" Metallic Shingles
"Metallic" Crestings and Finials
"Metallic" Corrugated Iron
"Hayes" Metallic Lathing
"Metallic" Eavetrough and Conductor Pipe
"Metallic" Pressed Zinc Ornaments
"Richardson's" Pressed Metal Doors and Sheet Metal Building Materials of every description.

MINING LAW REVISION.

IN accordance with the suggestion of the Minister of Lands and Mines, meetings are being held in the various mining divisions of Ontario to consider in what respects the mining law should be amended to provide for existing needs. As was to be expected, the resolutions passed by the people of one locality do not in all particulars coincide with those passed at a meeting in another locality. At one point the uppermost interest may be that of speculative claim-holders; at another it may be that of prospectors, and so on. Another cause of disparity of views as between sections is difference in mineral production. Where iron ore is the most important content of the local deposits a policy will be recommended that may appear to be at variance with the sense of the people who are considering what is best for the development of the nickel-copper deposits of their neighborhood. The resolutions of the several district meetings, however, will come before the convention which is to meet in Toronto on the 11th.

Hardware Store Business Methods

Compiled and Edited by R. R. WILLIAMS, Hardware Editor of the IRON AGE.

The thorough and practical treatment of the important subjects discussed, the embodiment in these articles of the experience of men of ability and enterprise, the suggestiveness of the principles and maxims thus presented, will, it is hoped, render the volume useful to many and tend to elevate still further the business methods of the hardware trade.

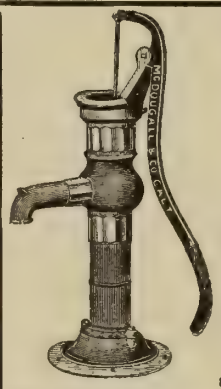
LOW-GRADE CORDAGE.

DURING past season considerable dissatisfaction has been caused by the sale of a so-called manila rope. It is difficult to distinguish real merit of a rope until it has been in use for some time, and for this reason many dealers have been imposed upon by unknowingly purchasing this bogus manila rope. The following extract from a recent issue of the Cordage Trade Journal is worthy of consideration :

"High grades of manila fibre have advanced out of all proportion to the fair current grade, and the stock that should go into bolt rope is much higher in proportion to-day than the ordinary stock. Considerable of the current business has been for the best grade of manila rope, and some members of the trade think that a re-action from the cheap grades of so-called manila rope is setting in, citing a number of incidents where dealers have declared that the dissatisfaction, caused by accidents and monetary losses, arising from the use of cheap bogus manila rope, has made them resolve to handle only a first grade of manila in the future."

THE INVENTIVE FACULTY.

IT'S human nature to be inventing or tinkering with something, from a story to the tariff; and the hardware clerk who hasn't some pet improvement up his sleeve shows that his mind is on some other subject than this work.



Perhaps nine-tenths of the inventions placed upon the market have no practical value other than as novelties; but of the other tenth, some of them are money-makers and most of the simple ones from which the greatest returns are apt to come originate in unexpected places.

One thing is pretty certain, that when a man sets out to improve a machine he is pretty apt to understand the machine he wishes to improve. Nothing else, except the professional pride that does not always come to a clerk at the beginning of his career, will set his attention so closely in the direction of any special line, as will the idea that he can think out some improvement to his material advantage.

The hardware dealer who allows it to be understood among his employes that he is on the alert for valuable mechanical suggestions from them, to help develop any that are worthy, will not often have to make the last part of the proposition good, but he will create for himself an attentive, observing and intelligent lot of clerks, and always has before him the possibility of a first chance at that unexpected little device that will make a fortune for himself and his ingenious employe.—Hardware.

PAINT, OIL AND BRUSH TRADES

THE PRICE OF KEROSENE.

RECENTLY Hardware and Metal received a communication from a manufacturing concern in Michigan, stating that they had found it impossible to do business in Canada on a profitable basis owing to the high price of kerosene oil. The company manufactures an oil heater which has won great popularity in the States, but the high retail price of coal oil in Canada does not encourage many people to use it as a fuel. While investigations are being made into trade "combines" it might be worth the effort to look into how the oil trade is centralized and the price of coal oil, gasoline, etc., kept up to figures far higher than paid by consumers in the United States. A correspondent in the Toronto Globe last Saturday has taken up the subject, giving the following comparison of prices now paid with those prevailing seven years ago :

"Prices paid by refiners for crude oil in the first half of 1898 are compared in the subjoined data with prices during the early half of the present year. The wholesale prices for lamp oil during the same periods are stated. The question has been raised whether the difference in price represents profit to the oil company or increased cost of handling by the tank system.

"Refiners paid in 1898 $1.40 per barrel of 35 gallons, and in 1905 $1.26 per barrel, that is fourteen cents per barrel less was paid in 1905 than in 1898.

"Lamp oil delivered to retail merchants by the single barrel cost eleven cents less, two cents per gallon allowed for empties when returned and 2 per cent. off for cash, in 1898. In 1905 the price delivered by tank wagon was ten cents per gallon, spot cash, making an advance in price from 1898 of one cent per gallon and no discount.

"Gasoline delivered by the barrel, 1898, fourteen cents per gallon; 1905; nineteen cents per gallon.

"Benzine delivered, Toronto, 1898, seven and one-half cents per gallon; 1905, nine and one-half per gallon.

"Fuel and gas oils in 1898, three and one-half cents per gallon; in 1905, three and one-half to five cents per gallon.

"Lubricating oils from five cents to ten cents per gallon higher in 1905 than in 1898.

"Refined oil in barrels, delivered at Quebec, 1898, twelve cents per gallon, freight prepaid, no charge for barrels. The lowest price heard of delivered in Quebec in 1905 was fourteen and one-half cents per gallon, same grade of oil, in barrels.

"The price of oil in 1897 was relatively the same as the cost of crude oil. Any dealer or consumer could buy at above prices who sent an order to the National Oil Co., Petrolea, at the date given. But now refiners sell only to their own agents, who are a class of middlemen appointed and paid by the refiners, and these men attend to the delivery to retail merchants.

"It is doubtful if there is one merchant in Toronto who could say what the price of crude oil is to-day or what it has been any month this year or what it was in 1898. The same may be said about the cost of refined oil, the merchant knowing next to nothing about it. He has no trouble of risk, as he carries only a few gallons stock, the oil is dumped into his tank as he wants it, he pays his cash for what the little slip calls, and that is all he knows about it. In proportion to the price he pays he adds his percentage of profit and so regulates his price to the consumer.

"It is clear that the consumer and producer have to pay to keep up this expensive method of bulk delivery. The consumption of lamp oil alone in Canada is about 24,000,000 gallons per annum, and the profit on it amounts to about half a million dollars per annum —rather a large sum to pay for a system that is supposed to be cheapening the cost of oil."

ATTRACTIVE WINDOWS PAY.

THE decoration of the store window is looked upon by a great many dealers from the standpoint of what it costs, the time of the clerk, etc., and not from the beneficial results, such as the increase in business, that may arise.

They have as yet to be convinced, shown in dollars and cents, that a well arranged window display is a paying investment, that it is one of the best paying advertisement any dealer can use to attract and maintain trade. This has been proven time and again by dealers all over the country, and to those who can't see anything in having well kept and attractive windows we would say, give the method a trial and, like many others, you will be convinced it is a good business policy.

The proof is seen from the fact that the brightest store in the block is always the attraction. Those in a hurry will stop and look at a well-lighted and well-dressed window, and in many instances the stopping means a sale.

Imperial Turps.

We do not claim it is pure Southern Turpentine, but we do know it is safe to use, and does not contain any injurious properties. This is more than we would like to say about some of the so called PURE in the market at present.

PAINT AND OIL MARKETS

QUEBEC.

Office of HARDWARE AND METAL,
232 McGill street,
Montreal, November 24, 1905.

ALL staples are in steady demand at the same quotations as last week. Business still keeps up with a rush, although it is expected that by the end of the week shipments will resume their normal condition.

Linseed oil has been swinging too and fro, occasionally stiffening in price and then easing off. At present it is a little stronger, but not sufficiently so to warrant any change in quotations.

Gum shellac is steadily advancing on import orders from Calcutta, but it is not thought that this will make any material difference in the Canadian market for some time.

Turpentine—Prices are still maintained at last week's figures, without any fluctuation. We quote as follows: Single barrel, 98c. per gallon. Two barrels or over, 97c. For smaller quantities than gallons, 5c. extra per barrel is charged. Standard gallon is 8.40 lbs. f.o.b. point of shipment, net 30 days.

Linseed Oil—The market has been fluctuating somewhat during the week, but the strength at time of writing warrants us in keeping the last week's readings unchanged. We give prices as follows: Raw, one to four barrels, 45c.; five to nine barrels, 44c.; boiled, one to four barrels, 48c.; five to nine barrels, 47c., f.o.b. Montreal. Net 30 days.

Ground White Lead—The price as advanced last week may soon have to be amended again, as the feeling locally is that this has not been sufficient to meet the rapid rise in the primary markets. We quote as folows: Best brands Government standards, $5.65 to $5.80; No. 1, $5.40 to $5.55; No. 2, $5.05 to $5.30; No. 3, $4.80 to $5.05; all f.o.b. Montreal.

Dry White Lead — Our quotations, which are considered cheap under the circumstances, are as follows Barrels, $5.40; 100 lb. packages, $5.65; 6 to 10 lb. tins, $6.65.

Dry White Zinc—The high tone noticed last week is being rigidly held and we are still quoting the following prices: Pure dry in casks, 7 1-2c.: in 100 lb. kegs, 8c.; No. 1 zinc in casks, 6 1-2c.: in 100 lb. kegs, 7c.

White Zinc (ground in oil)—The advance made last week is still being held. 25 lb. irons, 8c. to 10 1-2; No. 1, 6 3-4c.; No. 2 5 3-4c.

Putty—Our quotations are: Pure linseed oil, $1.75 to $1.85; bulk in barre's, $1.50; in 25-lb. irons, $1.80; in tins, $1.90; bladdered putty in barrels, $1.75.

Orange Mineral—Our prices are as follows: Casks, 7 1-4c.; 100 lb. kegs, 7 1-2c.; smaller quantities, 8 1-2c.

Red Lead—In spite of conditions in the primary markets we are still quoting the following prices: Genuine red lead in casks, $4.50; in 100-lb. kegs, $4.75; in less quantities at the rate of $5.75 per 100 lbs.; No. 1 red lead, casks, $4.25; kegs, $4.75; and smaller quantities, $5.50.

Gum Shellac—This article is now being quoted higher on import orders, but the Canadian market is hradly likely to feel the effects of this for some time yet. We quote the following prices: Fine orange, 55c. per lb.; med. orange, 50c. per lb.; bleached shellac (white), 60c. per lb.

Shellac Varnish—Splendid demand is keeping local producers busy shipping orders. We give the following prices: $2.50 to $2.60; pure orange, $2.40 to $2.50; No. 1 orange, $2.35 to $2.45.

Mixed Paints—We quote from $1.20 to $1.40 per gallon.

Castor Oil—Advances have again been made in Europe amounting to 3-4 of a cent, but as local stocks are good the prevailing price is from 7 1-2c. to 8 1-2c., according to lot.

Refined Petroleum—Conditions remain as before and prices are still as follows: American water white, 16 1-2c. and 17 1-2c.; Canadian prime white, 14 1-2c. and 15 1-2c.; 18 1-2c. and 19 1-2c. ex warehouse.

Window Glass—There is still, and there will be all winter, a great scarcity of most sizes. Shipments have not been up to expectations and as nearly all the boats are now in there is little hope of increasing stocks in Montreal before next spring. We quote: First break, 50 ft., $2.10; second break, $2.20; first break, 100 feet, $4.25; third break, 100 feet, $4.75; fourth break, 100 feet, $5; fifth break, 100 feet, $5.25; sixth break, 100 feet, $5.75; seventh break, 100 feet, $6.25; eighth break, 100 feet, $6.50. Diamond star, first break, 50 feet, $2.30; second break, 50 feet, $2.50; first break, 100 feet, $4.40; second do., $4.80; third do., $5.75; fourth do., $6.50; fifth do., $7.50; sixth do., $8, and seventh do., $9. Double thick, first break, 50 feet, $3.45; second break, $3.75; first break, 100 feet, $6.75; second do., $7.25; third do., $8.75; fourth do., $10; fifth do., $11.50; sixth do., $12.50; seventh do., $14; eighth do., $16.50; ninth do., $18; tenth do., $20; eleventh do., $24.00, and twelfth do., $28.50.

When the window "pull" is the right one, the dealer won't need a social "pull" or a political "pull." Give us the window "pull" every time.

ONTARIO.

Office of HARDWARE AND METAL,
10 Front Street East,
Toronto, Nov. 21, 1905.

LAST week's prices continue unchanged, although linseed oil producers have notified their customers that the present prices cannot continue after the first of the year. An increase can, therefore, be looked for. Turpentine is weaker from the Southern markets, but stocks are light locally and we have no change to report. White lead and kindred articles remain very firm with no changes since our late report.

Business continues very active for this time of the year and many orders are being placed by dealers who desire to have their stocks replenished before the expected advances are made in the early part of the new year.

White Lead—Ex Toronto, pure white, $5.80; No. 1, $5.37 1-2; No. 2, $5.00; No. 3, $4.25; No. 4, $4.50 in packages of 25 lbs. and upwards; 1-2c. per lb. extra will be charged for 12 1-2 lb. packages; genuine dry white lead, in casks, $5.25.

Red Lead—Genuine in casks of 560 lbs., $4.75; ditto, in kegs of 100 lbs., $5.00; No. 1, in casks of 500 lbs., $4.50; ditto, in kegs of 100 lbs., $4.75.

White Zinc—Genuine V., M., in casks, $6.50: in 25 lbs., $7.50; in 12 1-2 lbs., $8.00; Lehigh, in casks, $5.50; in 25 lbs., $6.00; in 12 1-2 lbs., $6.50.

Shingle Stain—In 5-gallon lots, 57 to 90c. per gallon.

Paris White—90c. to $1.00 per 100 lbs.

Whiting—60c. to 65c. per 100 lbs.; Gilders' whiting, 75c.

Shellac Varnish — Pure orange in barrels, $2.80; white, $2.90 per barrel; No. 1 (orange), $2.25.

Linseed Oil—Our quotations are: Raw, 1 to 4 barrels, 47c. to 48c.; boiled, 50c. to 51c.; 5 to 9 barrels, raw, 46c. to 47c.; boiled, 49c. to 50c. Toronto, Hamilton, London and Guelph, net 30 days. Advance of 2c. for delivery to outside points.

Turpentine—Single barrel lots, $1; 5-gallon lots, $1.10, f.o.b. point of shipment, net 30 days. For less quantities than barrels, 5c. per gallon extra will be added, and for 5-gallon packages, 50c., and 10-gallon packages 80c. will be charged.

Glues—Broken sheet, in 200-lb. barrels, 5 to 25c. per lb.; cabinet glue, in barrels, 11 1-2 to 12c.; emery glue, in barrels, 15c.; bookbinders' ground, 11 1-2c.; finest American white, 19c.; No. 1 American white, 15c. per lb.

Putty—Ordinary, bladders in barrels, $1.65 to $1.75; pure linseed oil, $2.00 to $2.10; bulk in barrels, $1.50; pure, $1.95 to $2.00; 100-lb. kegs, 25c. extra.

Plaster Paris—New Brunswick, $2.00 per barrel.

Liquid Paints—Pure, $1.20 to $1.35 per gallon; No. 1, $1.10 per gallon.

Barn Paints—70c. to 80c.

Bridge Paints—75c. to $1.00.

Castor Oil—English, in cases, 8 1-2 to 9c. per lb., and 10c. for single tins.

Refined Petroleum—Dealers are laying in their winter supplies and shipments are large. We quote: Canadian prime white, 14c.; water white, 16c.; American water white, 16c. to 18c. ex warehouse.

Crude Petroleum—Prices continue unchanged. We quote: Canadian, $1.36; Pennsylvania, $1.61; Ohio, 94c.

COTTONSEED OIL.

MR. J. W. ALLISON, chairman of the bureau of publicity of the Interstate Cottonseed Crushers' Association, in a recent address before the Texas crushers, said: "You have always been told that cottonseed oil, being a non-dryer, was unsuited as a vehicle for paint, and could not compete with linseed oil, which, even today, at the lowest value in its history, sells for nearly two-and-a-half times the value of your oil, and yet there is not, I am informed, a manufacturer of ready mixed paints in the country who is not, directly or indirectly, a buyer of cottonseed oil. I have seen myself, since being here on this visit, a house painted entirely with crude cottonseed oil that dried well, and it compared today most favorably with any linseed oil job of one-half the age. You are told that cottonseed oil, for the same constituent reason that prohibits its use in painting, and being rich in gums, is not a lubricant, and yet I have it, on no less an authority that the personal assurance of one of the leading directors in that company, that the North German Lloyd Steamship Co. buy annually about 6,000 barrels of cottonseed oil, which at their own plant at Bremerhaven, and by their own process, they convert into a high-class but economical lubricant. Do you presume that the greatest steamship line in the world, touching at all the ports where mineral and animal oils are the cheapest, and requiring a lubricant reliable under the severest conditions known to mechanics, is buying cottonseed oil for any other reason than that it is the best and most economical to be had?"

WALL PAINT AND MICROBES.

THE bactericidal effect of wall paints has been studied lately by Dr. Beaufils, of France, according to the following method: A layer of paint having been spread out on wooden boards or glass plates, a culture of microbes was placed on this layer after being dried, and the plate thus prepared was kept in the laboratory protected against dust. At regular intervals some microbe colonies were removed and spread out on an appropriate medium or used in inoculating animals. An unpainted check-plate served to ascertain the action exerted by the paint on the vitality and virulence of the microbes, this action being shown generally to be distinctly bactericidal while varying according to the nature of the painting. The colors of enameled porcelain are, for instance, found to be much more active than oil colors, especially in regard to the bacillus of tuberculosis. The fact that these paints exert a constraining action on the latter bacillus would seem to be the most important practical result of these researches.—Scientific American.

MONTREAL and WINNIPEG

That brand is on the pipe of quality

Every three feet of every length, while the pipe is hot, we brand our trade mark right into the metal.

That takes courage, when you know what our guarantee says to the pipe-buyer.

But we **know** nothing counts in pipe but quality, so we put the quality into the pipe and we show it's there by the brand and by the tag on every bundle.

If it wasn't **better** pipe, we'd not dare do that.

"The P. H. Book About Better Pipe" tells **why** we brand it—but it doesn't tell **why** no other maker goes that far. Perhaps you can guess, after you have read the book.

Will you have a copy—free and postpaid for your asking?

INDUSTRIAL GOSSIP

HARDWARE AND METAL would be pleased to receive from any authoritative source industrial news of any sort, the formation or incorporation of companies, establishment or enlargement of mills, factories, foundries or other works, railway or mining news. All correspondence will be treated as confidential when desired.

A NEW iron field opened in Algoma is said to be the most important in the history of the Dominion. The ore is partly bessemer, with a large tonnage, running from .06 to .07 in phosphorus, too high to be bessemer, but up to about 61 per cent. iron. The deposits are located along the west side of the Vermillion River in Nipissing district, and extend for thirty to forty miles, much of the distance in an unsurveyed part of Algoma. The distance to the village of Killarney, on the north shore of Georgian Bay, is about sixty miles. If the statement prove true that this discovery is second in importance to the mining world to that of the Mesaba range alone, it argues a career of prosperity for our iron interests undreamed of a year ago. A railway can be run to the district connecting with the deep waters of the great lakes, making a rate to Cleveland and other lower lake ports of about $1 per ton, or sixty cents a ton less than the rate from Duluth.

Bickford & Mackay will erect a knitting mill at Dundas.

The Ontario Asphalt Block Company may remove from Walkerville to Stratford.

A new industry to manufacture the Hanson Car Coupler is to be started at Madoc.

The Turnbull Elevator Co., Toronto, will erect a three-story factory to cost $6,000.

The capital stock of the Pembroke Electric Light Co. has been increased to $150,000.

The J. C. Graham Lumber Co., Winnipeg, will erect a large warehouse in that city.

The Empire Wall Paper Co. of Toronto intends to open a branch of the business in Winnipeg.

The Galt Knitting Co., Galt, are erecting a large concrete addition to their other works.

Mr. J. P. Smith will erect a factory in Vancouver for the manufacture of mining machinery.

Weibe & Rompel, Laughan, Sask., are erecting a flour mill there with a capacity of 125 barrels a day.

Representatives of an Ohio concern manufacturing hay presses, etc., have been looking for a site at Guelph.

The capital stock of Strathcona Coal Co., Fredericton, N.B., has been increased from $120,000 to $200,000.

It is the intention of W. H. Snyder & Co., manufacturers of the Berlin piano, to enlarge the capacity of their plant in the near future.

The Robertson Machinery Company has recently been organized at Welland to manufacture hoisting machinery and contractors' plants.

The C.P.R. has taken over on a long lease the Tillsonburg, Lake Erie & Pacific Railway and will operate it as part of their Ontario division.

For the purpose of establishing a gas plant at Manitou the Manitoba Gas Company has been granted incorporation with an authorized capital stock of $7,500.

Two steamers having a tonnage of 7,000 each, to be launched next Spring, are to be built in England to the order of a Norwegian firm this Winter for the St. Lawrence coal-carrying trade of the Dominion Coal Company.

The town of Cornwall has passed a by-law to loan $20,000 without interest to Thomas McGill and a company formed by him for the manufacture of chairs. The loan is to be repaid by installments within the next twenty years.

The new Singer Sewing Machine factory at St. Johns, P.Q., is now nearly completed, and represents an outlay of about a million dollars. Unlike other plants of the company, this will be the only one where the famous Singer machines will be made complete.

The Cataract Power Company will soon be able to furnish 13,000 more horse-power to industries in Hamilton. It has completed the electric line from Hamilton as far east as Bronte but will not be able to connect with the Mimico line into Toronto till next year.

The Canada Tap & Die Company has purchased the Clark-Demill building at Galt and will commence as soon as possible the manufacture of taps, dies, screw-cutting tools and other machinery. The promoters are interested in similar industries in the United States.

The Standard Paper Company have been negotiating with Cannington for the establishment of a paper mill there. The company want right-of-way, cash bonus of $10,000 to build an electric railway for their own and public use. The company will undertake to build a mill to employ steadily from 40 to 50 men.

The Government bounty on pig lead produced in Canada has been reduced owing to the standard price of the lead in London. The bounty was formerly 75 cents per hundred pounds, providing the total did not exceed $500,000 a year. The increase in price in London has caused a reduction in the Canadian bounty.

A suggestion is made that Canada shall cancel the subsidy to the Canada-Australian line of steamers, on the ground that the recent regulations regarding the valuation of imports by the Australian Commonwealth is a discrimination against Canadian trade. The subsidizing of a direct line to New Zealand is advocated instead.

W. M. Dougall, president of the Kootenay Power & Light Co., estimates the cost of installation of the new machinery at Bonnington, on the Kootenay River, B.C., together with the pole lines, will be about $1,000,000. The company will have 28,000 h.p. for industrial purposes and expects the lines into the Boundary will be ready for transmission purposes in March or April.

Work is being rushed by the Canadian Navigation Co., Toronto, to make room for the new 22½ mile an hour express steamer for the Niagara Navigation Co., which will be launched in six weeks. The company during the past two weeks have secured the contract for a new pas-

senger steamer for Muskoka Navigation Co., a car ferry for the Grand Trunk with a capacity of 28 loaded cars, and a steamer for the down-the-rapids route of the Richelieu and Ontario Navigation Co.

The Dominion Iron & Steel Company has just received a contract from the Boston Elevated Railway for a sample shipment of rails to be used on the curves of that line. The maximum wear of the ordinary steel rail on the curves of the "L" road is forty-three days, but it is confidently expected that owing to its exceptional wearing quality the Sydney rail will show, as a result of the experiment, an advantage of at least fifty per cent. over the material hitherto used.

A complete reorganization of the Montreal Street Railway Company has been decided upon by the directors. It is intended that the capital of the company will be increased from $7,000,000 to $12,000,000 and the value of the shares to be increased from $50 to $100. At the present time the Park and Island Company are indebted to the Montreal Street Railway Company over $800,000, and it is intended that the Montreal Street Railway buy out the Park and Island Company altogether and refund all the money owed. The Park and Island Company is controlled by the Montreal Railway Co.

Companies Incorporated.

Cobalt-Merchants Mining Company, Toronto, share capital $200.000, purpose to do the business of a mining, milling, reduction and development company. The directors are H. B. Wills, R. Falconer and W. Vandusen, all of Toronto.

The Shirreff Manufacturing Company, Brockville, share capital $50,000, purpose to manufacture carpet sweepers, step ladders and other wood and metal articles. The directors are: C. J. Shirreff, G. A. Shirreff, W. P. Shirreff, W. M. Osborne, and B. R. Shirreff, all of Brockville, and G. A. Shirreff, of New York, N.Y.

The Silver Gulch Mining & Prospecting Company, Cobalt, share capital $75,000, purpose to carry on the operations of a mining, milling, reduction and development company. The directors are L. H. Timmins, T. J. Harwood, of Mattawa, R. A. Cartwright, Belleville, W. C. LeHeup, Cobalt, and D. A. Dunlap of Haileybury.

The Margaret Mining Company, the Annie Mining Company, the Louise Mining Company, the Annabella Mining Company and the Isa Mining Company, all of Toronto, share capital of each to be $40,000, purpose to carry on the operation of mining, milling, reduction and development companies. The directors of all the companies are H. M. Chance, Philadelphia, Pa., A. Easken, and H. Armstrong of Toronto.

The license of J. M. Kohler, Sons & Co., of Wisconsin, has been revoked to do business in the Province of Ontario.

The Big Dipper Mining & Milling Company, Peterboro, share capital $2,500,000, purpose to carry on the business of a mining, milling, reduction and development company. The directors are: S. Sager and J. S. Waldron of Peterboro, J. M. Fletcher and J. J. Tisdale of Buffalo, N.Y., A. J. Reed, E. R. Wilson, B. F. Hayward and G. H. Bradley, all of Bolivar, N.Y., and J. Jamieson, Barrie, Ont.

No. 31. OSHAWA, ONT. Nov. 25, 1905

The attention of the trade is now centred on our latest manufacture:

FIREPROOF
PARTITION STUD

Builders are interested because it will be a boon to them (the price of lumber is high, fire insurance rates also)

Hardwaremen everywhere should be interested because from them the studding will be bought.

We are also making a

SHEET STEEL
FURRING STRIP

which, used in conjunction with our **Fireproof Partition Stud** and **Perfect Metal Lath,** is "ideal" for buildings.

No Hardwareman can afford to go along without carrying these manufactures. You, no doubt, are already equipped with our **Roofing, Siding, Covering, Ceiling,** etc.

Make your stock complete by ordering a quantity of the **Studding, Furring** and **Expanded Metal Lath.**

WRITE YOUR NEAREST OFFICE.

EXACTNESS

is essential to successful rifle-making. We believe that and act accordingly.

THE HAMILTON RIFLE

MODEL No. 23

is an illustration of exact workmanship. It is not made in the ordinary way. That is the reason we are prepared to guarantee it. We make the barrel of **MODEL No. 23** by patents exclusively owned by us. The process brings the metal to the highest degree of hardness. Then, the rifling is done by a system which ensures uniformity in every barrel. Think of it! **MODEL No. 23** goes on the market to retail at **$3.50**—mere pocket money—and yet it is a rifle for men.

Have you ever spoken to your Jobber about the "so-good, so-cheap" **HAMILTON RIFLES?** If he cannot supply you with a stock, write us direct.

THE HAMILTON RIFLE CO.

Business Changes

Ontario.

R. J. Harmer, blacksmith, Fullarton, has sold out.

W. L. Taylor, agricultural implements, Peterboro, har assigned to Henry Rush.

There was to be a meeting of creditors on the 21st of Guenette & Frere, hardware merchants, Hawkesbury.

Quebec.

W. Houston & Co., plumbers, Montreal, registered.

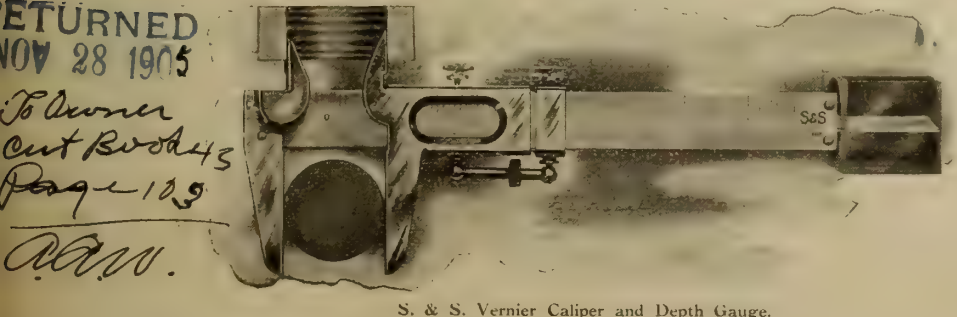
A. B. Littel, blacksmith, Waterville, has been succeeded by Wm. Carrier.

Guenette Freres, hardware, Montreal, are offering 30 cents on the dollar cash.

Western Canada.

Wm. Murphy, tinsmith, Saskatoon, has been succeeded by Jason Graham.

The J. A. Falconer Co., hardware, Goodlands, are selling out to A. Fletcher.



R. J. Rutledge, agricultural implements, Lauder, is selling out to F. G. Jackson.

New Brunswick.

John W. Addison, hardware merchant, St. John, deceased.

VERNIER CALIPER.

SCHUCHARDT & SCHUTTE, 136 Liberty street, New York, offer the S. & S. vernier caliper shown in the accompanying illustration, which also demonstrates the method of ascertaining accurately inside and outside diameters and depths. They are made in full polished, with and without horizontal adjusting screw and in the same styles in full nickle plate. The instrument is 6½ inches long over all, closed, the end depth gauge having a capacity of 3 13-16 inches. The style illustrated is graduated in sixteenths and fiftieths of an inch, the vernier attachment enabling the user to get positive measurements to the thousandth of an inch. Similar calipers are also furnished with

S. & S. Vernier Caliper and Depth Gauge.

graduations and verniers for readings to 1-128 inch and 1-10 mm., metric measure. There can be no confusion in determining results, as all three styles of gauges are read from similar scales and verniers. For carrying, leather pockets with metallic snap buttons are furnished. The four tools list but $2.25, $2.55, $2.90 and $3.15 each, according to finish and whether or not they have the adjusting screw; subject to trade discounts. This caliper can be obtained in Canada from McLean & Sophus, Montreal.

CLOTHES LINE FASTENER.

A NOVEL clothes line fastener shown in the accompanying cuts is made from steel, enameled. Figure 1 represents the line after having been put up, with the surplus line coiled. After passing the line over the yoke at the top of the fastener it is pulled taut and is automatically held by the fastener. As an intermediate fastener the device is illustrated in Figure 2, which shows how two lines can be fastened without drawing them through the yoke. To unfasten the line the top of the fastener is touched, when it will be instantly released. The device is offered by the West Michigan Machine & Tool Company, Grand Rapids, Mich.

Fig. 1.—Clothes Line Fastener.

Fig. 2.—Intermediate Fastener

Study the different methods of furnace heating so that you can tell the possible customer what kind he should use for his particular purpose.

The Welland County Lime Works Co. of Port Colborne are building a power house in which they will install an electric light plant and gas engine.

KEEP BUSY.

A busy appearance about the store is a good method of impressing customers that your store is the place to trade.

Everybody likes to be with the majority, and if your clerks and yourself are always busy it creates the impression that you are doing a large business.

The habit of gossiping with people who enter is to be strongly condemned, as it makes your place a loafer's resort.

Give your customers to understand that you have enough business to attend to to keep you busy and must reserve your time for that. It is unnecessary to insult anyone to make this plan a success, as all persons are in the habit of giving credit to a busy man of being a successful man.

NEW HOTEL FOR CORNWALL.

Travelers who cover Eastern Ontario will be glad to learn that Cornwall is to have a fine up-to-date hotel. When the improvements now being made to the Clifton House are completed, there will be twenty-two bedrooms, and the sample rooms are designed to be large, airy and well lighted. The building will be steam heated throughout, and when finished will be run under the management of J. R. Duquette, formerly proprietor of the Algonquin Hotel, Stanley Island. The contract for remodelling the hotel has been let to J. B. Atchison of Cornwall.

SOME FINE SHEARS.

H. Boker & Co. are putting on the market a new line of "Tree Brand" shears, and will give, with an order for half a dozen each of the three shears illustrated, free of charge, an oak cabinet showing one 7-inch medium shear, one 8-inch straight trimmer, and one 9-inch bent trimmer shear, with full nickeled blades and japanned bows. All leading wholesale firms are handling same.

BUILDING AND CONSTRUCTION

THE WONDERS OF BUILDING.

THERE are no greater wonders of the age than are to be found in the building trades.

More wonderful things are being done with lumber to-day than were dreamed of a few years ago.

Greater wonders are being accomplished in the general construction of buildings. A few years ago all of the strength of the structure was in the outer walls, to-day the outer walls may be nothing but a coat for the inner structure, which will stand just as well without the wall as with it.

Greater wonders are being wrought in the designing and preparation of brick. Nothing in the way of color or originality of design seems to be beyond the possibility of the manufacturers.

Great wonders are being accomplished in interior construction, arrangement and decoration.

But probably the greatest wonder of the recent years in building is the rush to the fore that has been made by cement. It is but a few years, comparatively, when cement was very little used and very little understood. To-day whole buildings, from foundation to roof, every feature, with the exception of doors and window frames and glass, are being made of cement. To-day cement is mixed on the street and poured into moulds, which, when removed, leave the finished structure standing. Great bridges are being constructed in the same manner. Building blocks are being made, thousands to the minute, by ponderous machines, to take the place of stone. They are made in all sorts of shapes and designs.

Where cement was scarcely known a few years ago, it would now puzzle the builder to erect a structure without it.

REFRIGERATOR AND FURNACE

THE ice man and the hardwareman were discussing the ins and outs of business, says the Hardware Dealers' Magazine. "There is one thing that has struck me time and again," said the ice man, "and that is that there are either a lot of fool architects in New York City, or that they have an interest in an ice plant on the side.

"In lots of private houses where I serve ice, the refrigerators are set directly over the furnace; built in so that only the flooring and the ceiling of the cellar are between the hot furnace and the well-warmed refrigerator. I can spot one of these misplaced boxes by the amount of ice consumed—just double that required in other houses where a hot fire and ice are kept apart.

"No, I don't make any complaint or explanations to the man who owns the house. I just keep my mouth shut and go on feeding the old thing with ice."

"That's a pretty good story," laughed the hardwareman. "You said you wanted a pair of ice tongs?"

"Yes," responded the ice man, "and good and heavy ones, too."

"How are these?"

"Not heavy enough, by at least two pounds."

"But they are mighty good tongs, strong and light," explained the hardwareman, "and will hold all the weight you can carry."

"You don't seem to catch on," said the ice man. "Every time I deliver a cake of ice, I weigh it, don't I?"

"I suppose so."

"Well, it hangs to the tongs when it is weighed. The total is so much, tongs and all. If the tongs are light I lose just so much each time they are weighted, don't I?"

"You do," said the hardwareman.

BUILDING NOTES.

The Miramichi Lumber Co. will build a saw mill at Chatham, N.B.

G. Attridge will build a house and stable on King street, Hamilton, to cost $3,500.

Plans for the new post office at North Bay have been approved, and tenders have been called for at once.

Work has been commenced on Vancouver's first wheat elevator, on the site which Messrs. Hall & Son, of Winnipeg, secured from the C.P.R.

It is the object of a number of capitalists in Montreal to erect a large theatre on St. Catherine street.

The G.T.R. have purchased a site at Fort William, on which a large warehouse will be erected very shortly.

A new seven-stall roundhouse is being erected by C.P.R. at Estevan, Man., to replace the building destroyed by fire.

Stewart & Whitton, Hamilton, are preparing plans for the reconstruction of the Commercial Chambers. It is estimated this will cost about $8,000.

Chas. J. Boon, Toronto Junction, has commenced work on a large solid brick building, 45 x 128 feet, and four storeys high, for an American brush company.

The Bank of Toronto is to erect a new building in Toronto. It will be four storeys high, built of stone, brick, steel and concrete, and will cost $130,000.

J. Finlay, Norwood, intends erecting a new concrete factory, 65 x 85 feet, next season. Norwood Council will give the firm a fixed assessment, the only inducement asked.

Plans for the extension and improvement of the Windsor Hotel, Montreal, have been approved, and the work will commence as soon as weather will permit next Spring.

The Brantford Ice Co., Brantford, intend to erect a large ice house. A fine plant of machinery for elevating ice will be installed, and the capacity of the building will be 8,000 tons.

Jean Warren intends to construct a new hotel at Point au Pic, on the property formerly occupied by the cottage of Judge Routhier. The new hotel will be known as Chateau Murray.

A. E. Young, Saskatoon, has purchased two lots on the corner of Twenty-second and Second streets, and, with Mr. W. H. McBeth, will erect a two-storey cement block next Spring.

The city permits of Winnipeg show an increase of over $1,000,000, and they continue to increase. Permits were issued last week by the building inspector for structures valued at $25,000.

The total cost of building erections at Swan River, Man., during the year is $55,000. This village has passed the experimental stage, and with the splendid surrounding country its future is assured.

Plans are being prepared for the construction of the new City Flour Mills, St. Thomas, for George Adcock, on Southwick street. The main structure will be four storeys high, besides a ten-foot basement.

W. J. Pendray & Sons, Victoria, have commenced building a new factory on the wharf where the old building used to stand. The brick building is also being altered in order that the soap-making machinery may be installed.

Messrs. G. M. Hanson & M. N. McKusick, of Calais, are to erect at once, near Charlotte Station, a new steam saw mill, which will be equipped with all modern machinery necessary for the manufacture of long and short lumber.

The Nordheimer Piano Co., Toronto, have decided to start work on the additions to their factory this Fall. The building will be 45 x 28 feet, and will be four storeys high. It is understood that an American firm, manufacturing brushes, will occupy a portion of the building.

Permits have been granted in Hamilton for the following: J. McNeil, brick house, $2,000; W. Noble, four frame houses, $4,000; Dr. Brown, brick house, $2,500; Ald. Main, two frame houses, $2,000; R. Stewart, brick house, $1,250; J. E. Barrett, brick house, $1,900; W. Cross, brick addition to store, $1,500; Thomas J. Rousell, brick house, $1,600; and J. A. Armes, brick house, $2,100.

Over $40,000 worth of permits have been issued at the City Hall, Montreal, for building. The Brothers of the Sacred Heart will build a residence on Fullum street at $10,000; L. C. Papineau will put up two houses on Drolet street at $8,000; David and Dubreuil a tenement house, three-storeys, on Frontenac street, at $8,000; and Mr. Gunnings a four-house tenement on Amherst street to cost $9,000.

There is every indication that the town of Cobourg will be kept busy in the building line during the balance of this year and next Summer. A new public school is to be built, estimated to cost $25,000. W. H. Howe has plans ready for the erection of a large residence. Frank Abbott, of Pittsburg, has commenced the erection of a large brick residence. Mr. Martin is erecting a double brick house, and Mrs. Haskell, of Chicago, has purchased the Queen Street School and will transform it into a Summer residence.

PROUD OF HIS COUNTRY

AND ITS INSTITUTIONS is the dealer who can with confidence, in selling an article, say to his customers: "This is made in Canada, and neither the Yankees nor any other people can produce anything better."

Conditions have changed in recent years, and are changing. "This is imported" is not cutting much figure now-a-days. The **Made-in-Canada** article is what is wanted by both trade and people. Especially is this true of **Church's Cold Water**

ALABASTINE

as is evidenced by the rapidly increasing demand from year to year.

ABSOLUTELY NECESSARY now to stock very early in the season this Permanent and Sanitary Wall Coating, that **HARDENS WITH AGE**, to insure having it in store when the early spring rush of house renovating comes on. The logical conclusion is **Order Now** from jobber or direct. Spring dating. It is **BUSINESS** to do this, and not have to say: "Just out of that shade." All tints and white in stock, together with a good supply of advertising matter is necessary.

THE ALABASTINE CO., Limited, - - Paris, Ont.

THINK IT OVER

Many offices are badly lighted and unhealthy as the result of improperly-constructed buildings. Alterations to the buildings, tending towards a remedy, usually mean a big outlay of money. But the necessary daylight can be gathered from the sky and diffused throughout such buildings by

MAXIMUM LIGHT GLASS

Perhaps the owners of the badly-lighted buildings haven't given the matter much consideration. Most likely they would if they could be shown that the adoption of a **certain** daylight-increasing system would be profitable to them.

Any Hardwareman can make a strong case why MAXIMUM LIGHT GLASS should be taken in preference to all other systems, because everything is in its favor—all victories, no defeats.

MAXIMUM LIGHT GLASS can gather daylight passing down light shafts and diffuse it throughout long rooms, can be placed in as ceiling lights, applied to lean-to skylight, and **is the only glass that when placed directly in the window sash is effective.**

Secure samples and prices immediately and prepare for trade.

PLAIN TALKS ON PLUMBING, HEATING AND VENTILATION

A Series of Practical Articles Written in Plain Terms, Devoid of Technical Phrases, Algebraical Signs, etc., so as to be Easily Understood by all Interested in these Subjects.

By M. J. Quinn, Mechanical Superintendent for the Ontario Government.
[Registered in accordance with the Copyright Act]

Article XXI.

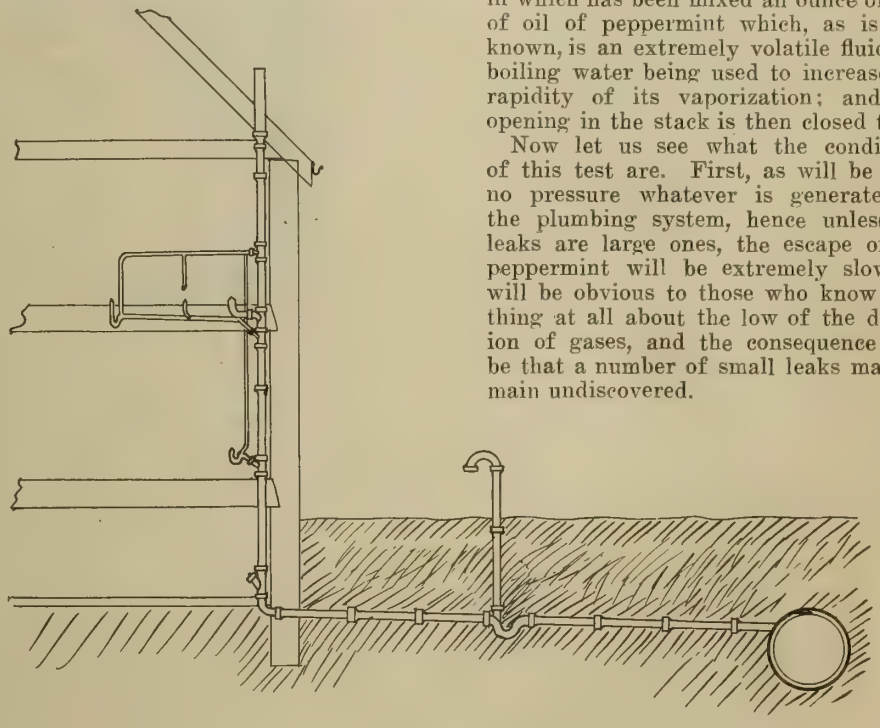
TESTING A PLUMBING SYSTEM.

WHILE we have not yet by any means dealt with all the details of a plumbing system, which would no doubt be dealt with in a volume on the subject alone, before touching upon the question of applying a test of any kind, still we think it is well in view of the character of the preceding articles upon the subject to say something of the tests that are used for the purpose of discovering any defects that may exist in a system, but which may not be apparent to ordinary observation.

The testing of a plumbing system is divided into two classes viz., first, the test which should be applied to all of the piping systems, including the soil and waste pipe, break syphons, etc., before the fixtures are connected and the test which is applied to the entire system after the fixtures are in place and all of the connections made.

The first test is called a hydraulic test and is made as follows: First the tops of all taps, and the ends of any other openings from the soil pipe system into the house, are closed up tight and soldered over, this being done either by gently beating both sides of the pipe together and soldering one straight seam across or by fitting in a piece of lead the full size of the opening, and in such a way that it may readily be removed again when the test has been completed, and soldering same to the inside circumference of the pipe, but in the opinion of the writer all openings which are very far below the top of the stack should be closed in the former way, as it is stronger than the latter and much less likely to leak when the pressure is exerted from within.

Capping up having been done, it is necessary to fill the stack with water and this is usually accomplished by entering a testing plug into the mouth of the cast iron pipe just outside the foundation wall and securely fastening same to withstand the strong pressure that will be exerted from within when the stack is full of water and, having a 1-2 inch hose cock screwed into the testing plug, the water is turned on through a hose, either from the pressure, or, if the latter is not available, then from a hand force pump, and the water is forced in until it flows out over the roof through the top of the stack, when the cock in the testing plug before mentioned is closed off, thereby preventing the escape of water except through any leaks which may appear and which, as will be apparent, may easily be traced, and the necessary repairs made, so that every portion of the piping system will be absolutely tight before any fixtures are installed.



After the hydraulic test has been successfully applied and the leaks, if any, repaired the various connections for fixtures are carefully opened and prepared for the final connections which must be very carefully made for the reason that, as will be obvious, it is impossible to apply any test to the complete system, with the fixtures installed, which will be as strong or as likely to "show up" defects as the test which we have applied to the stack and branches, so that in making the joint to the fixtures, and especially to the closet, great care should be exercised.

As will be apparent, the test to be applied to the completed system must be of such a nature as to expose any existing defects without using enough pressure to affect the water in the pipes, but still sufficient pressure to create a movement of the air in the pipes toward any place where it may escape, and so expose the defects.

There are two methods of final testing which may be used, but in reality only one that is positive and hence only one that can be recommended.

The first method and the one which is seldom used by up-to-date plumbers, except in a "pinch" when the proper facilities are not available for making the other test, is what is known as the peppermint test. It consists of first closing up all openings except one, preferably the top of the stack, and then pouring in through the latter opening about a half gallon or a gallon of boiling water in which has been mixed an ounce or two of oil of peppermint which, as is well known, is an extremely volatile fluid, the boiling water being used to increase the rapidity of its vaporization; and the opening in the stack is then closed tight.

Now let us see what the conditions of this test are. First, as will be seen, no pressure whatever is generated in the plumbing system, hence unless the leaks are large ones, the escape of the peppermint will be extremely slow, as will be obvious to those who know anything at all about the low of the diffusion of gases, and the consequence may be that a number of small leaks may remain undiscovered.

If, however, the odor of peppermint is noticed in a room then the plumber has to go over all of the piping, fixtures, etc., "with his nose" and even then may not succeed in locating the defect because all the air in the room will be charged with the odor so that on the whole the peppermint test must be condemned as being altogether unreliable, and should never be used because the feeling of security, false though it be, given to proprietors whose plumbing has been tested by it without showing defects, may result in exposing themselves to dangers about which they know nothing and which may terminate with disastrous results.

The other method of final testing and the only one which can be recommended, is what is known as the smoke test and if properly applied can be depended on to expose any defects that may exist.

The smoke test is a process by which the entire system of piping is filled with a dense heavy smoke from smoul'dering oily waste, the odor of which is instantly detected if present in a room and it is bound to escape from the piping in the building, if any leaks exist, for the reason that, unlike the peppermint test, it is put into the system under a slight pressure.

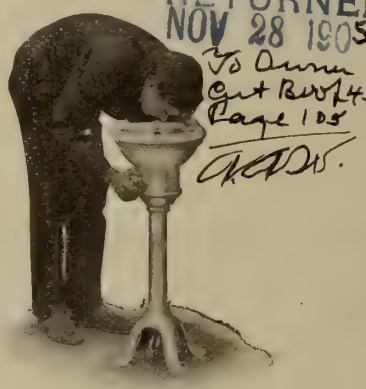
The machine used for collecting the smoke and introducing it into the system is very compact in form and has a small copper receptacle into which the smoul'dering cotton waste is placed. This ocpper vessel is surrounded by another about an inch longer in diameter and the space between the two is filled with water so that when a third vessel with a top, but no bottom, is slipped down into the space between the first two vessels mentioned, the water makes a seal which prevents the smoke escaping except through an opening in the bottom of the first receptacle, to which a 1-4-inch hose is attached.

Connected to the first mentioned receptacle also is a small double-acting bellows which forces the smoke therein contained out through the hose before mentioned and this nose being connected to the "foot vent" rising above the ground, and which is connected to the house side of the trap, as shown in the accompanying sketch, conveys the smoke first into the house drain and then up through the soil and waste pipe and all their branches.

When smoke is seen coming out through the top of the soil pipe above the roof in considerable volume, the latter opening is closed up tight and the bellows on the smoke machine kept moving until enough pressure is generated to float the cover of the fire receptacle, which, as was said before, floats between the latter and the outside casing, and if this cover remains floating the plumber has the evidence that there is no escape within the building.

If, however, the pressure so obtained cannot be maintained, then it is only necessary to look over the system to discover, not by the sense of smell alone, but by actually seeing the smoke escape where the leaks are.

It is advisable to keep all windows and doors on the side of the building on which the smoke machine is being used closed because of the danger of the smoke which from time to time escapes from the machine itself blowing in through these openings and so creating a false alarm.



HYGIENIC DRINKING FOUNTAIN.

WE present our readers herewith an illustration of the Hygienic Regal Porcelain Drinking Fountain with self-closing controlling valve, which has recently been placed on the market by the Haines, Jones & Cadbury Co., of Philadelphia, U.S.A. The fixture is a modification of their continuous flow Hygienic Drinking Fountain which they have been selling for some years.

The main advantages of the self-closing attachment are two. In the first place it prevents the wasting of water, as the fountain flows only when self-closing valve is held open, as shown in the illustration. Secondly, it is often desired to cool the water supplied to the drinking fountain. Where there is a continuous stream the water can be only slightly cooled by passing through the ice box, but where the water only flows as required, opportunity is offered for the water in the pipes to cool while the fountain is not being used.

The sanitary features of the Hygienic Drinking Fountain commend it for use in schools, railway stations and public buildings of all kinds. The water supply is regulated by a lock key stop (shown in the illustration near the floor) and issues as a miniature fountain from the top of the brass jet pipe and overflows into the bowl. The user drinks from the top of the spray, so that the mouth is not brought in contact with any of the metal parts, but only with the stream of running water. In this way all danger of spreading contagious diseases by

Hygienic Drinking Fountain.

contact with drinking cups or other metal parts is entirely eliminated.

The Hygienic Drinking Fountain is furnished with a Regal porcelain bowl on a bronzed iron standard, and the brass jet pipe, strainer, waste and supply pipes to floor and lock key stop are all nickle plated. Those interested in drinking fountains for public places are invited to correspond with the Haines, Jones & Cadbury Company at their offices in either Philadelphia or San Francisco, where further information and prices will be gladly furnished. Please mention Hardware and Metal.

DECORATIVE LIGHTING.

MANY suggestions have been made as to what is the best possible way to treat a room from a decorative point of view, in order to get the most pleasing result, and oddly enough no one has touched on the vast field offered by the lighting fixtures which to-day can be gotten up in such unique and artistic designs.

At one time the style or pattern of the chandeliers was considered immaterial, provided they gave satisfactory light, but fortunately in recent years, realizing what an essential feature the chandelier is in carrying out successfully a certain desired result, decorators and those interested in interior treatment have put particular stress on this point. This has resulted in some very happy effects, and since they are as much a part of the interior decorative scheme as any of the other furnishings, a few words apropos of their use should be timely. In order to obtain best results it is well for those who contemplate building homes to plan their lighting very early in the course of the construction of the home, so that the electric wires can be most advantageously placed. Very often one finds after the house is almost completed that the wiring is not at all suited to the use of some design or scheme which he would like very much to adopt, all of which might have been avoided had more than passing attention been given to the electrical installation.

Being preoccupied with so many things which seem more immediate and pressing, we are prone to leave this to the discretion of a contractor who places the wire outlets throughout after a set rule, which, while it no doubt lights a house satisfactorily, very seldom lends itself to the application of unique lighting effects, such as the spirit of the period demands.

The tendency to-day is to avoid stiffness in design, and as almost all residence lighting is now done with electroliers, it makes it possible to overcome that unsymmetrical and clumsy appearance produced by the old-fashioned gas fixture, and where it is deemed necessary to have some gas, in the event that the electricity fails, this feature is taken care of by an emergency jet, which usually appears as a part of the chandelier ornament. The prevailing sentiment seems to be toward the simpler patterns, since designers have demonstrated that rich simplicity and graceful elegance can be obtained with severe lines properly assembled, which is more gratifying to the eye than the ornate designs formerly so common.

The effectiveness of the light fixtures is materially enhanced by the range of possibilities offered in the color and finish of the metal. Electroplating has now reached a degree of perfection whereby it is possible to reproduce all the antique colorings, and some of the verde greens and Pompeiian bronzes are so cleverly executed as to be hardly distinguishable from the genuine. One can readily appreciate what this means toward the successful completion of a harmonious decorative scheme.

It is a much-mooted question as to whether side or centre lights best light an apartment. The living room in the modern home, which supplants our old "sitting rooms," is usually large, and should be provided with both a centre and side light, the number of the latter depending upon the size of the room, and to be so placed as not to destroy valuable picture space.

Often a reading table occupies the centre of the room, and the chandelier over it will give the best results when supplied with a hanging dome to deflect light downward upon the table. The wall fixtures will give general illumination throughout. These should be sufficiently shaded to protect the eye, but not so much as to lose the light.

A reception room should have side lights only, and of a delicate character, those in which silk or cut beaded glass shades are employed being most effective. These rooms are usually small, and a centre fixture should be avoided,

as it has a tendency to produce that stuffy oppressiveness or overcrowded feeling which is to be avoided in a room of this character.

The hall should have a centre electrolier placed close to the ceiling. Art glass effects, in which the source of light is concealed, are good. When large, an additional bracket or two is desirable.

In the dining room it is essential to have a centre or dome fixture, and here is an opportunity to adopt one of any number of different schemes, all of which are practical. When candelabra are not used, the fixtures should hang low over the table, and be so arranged with either the fringe or a diffusing plate as to bring the light below the level of the eye when seated at the table. A very pleasing arrangement for dining rooms is a Tiffany art glass dome, in brick or scale detail, with crystal cut bead fringe, supplied with four side runners attached to the ceiling, from which are suspended art glass shades in harmony with the centrepiece. Wall brackets to correspond should be placed at either side of the mantel or buffet. Lights should also be placed in the buffet to reflect upon its contents, but concealed from view. This adds very much to the richness of the china and glass display.

Chamber lighting has always been a serious problem. The desire here is to get good light into the dresser glass, and this is usually best accomplished with a side fixture, one on either side of the dresser, arranged to swing, and with the bulb at an angle of 45 degrees.

Where a cheval glass is used, a fixture which comes from an opening in the wall directly above the glass, with a small dome over the light, is an ideal means of lighting the entire figure as one stands before the glass. This, however, must be sufficiently high to be out of the way and not obstruct the reflection. A single ceiling cluster in the centre of the room completes the necessary bedroom fixtures.

There is an apparent lack of attention given to the design of fixtures intended to light the veranda. This is one of the first things the visitor sees, and since first impressions count for so much, is it not important that this should be particularly good? For a simple country house or cottage with a small veranda, a Paul Revere lantern with polished horn or mica lining is satisfactory. The perforated ones of the same period are impracticable, giving off so little light.

Another novel effect can be obtained by suspending a regulation ship's lantern from a yardarm. This will show to best advantage when placed directly on the corner of the house, if sufficiently protected by the eaves from the action of the weather. For the mission house, a true copy of the mission bell in glass, suspended on a single chain, will be appropriate and pleasing. This bell globe idea, combined with roughly executed hand-wrought or hammered iron electroliers, can be aptly applied to lighting the interior of the mission house, which is so much affected in Southern California.

The electrolier of to-day can be in itself a work of art, and should be in entire harmony with the other decorations about them, and reflect in each case the style of the rooms in which they are placed.

As a whole, the fixtures can be made to form a series of marvelously artistic additions to the general decorative scheme. By the selection of various metals harmoniously put together and combined with the correct tones in art glass, they supply a note of brilliant color, and in some cases form the most attractive feature of a room.

Most people who build pretty homes now devote much time to reading and the study of every step which goes to complete the whole, and thereby succeed in getting a very happy and pleasing result; but the bringing of a residence to a satisfactory finish in every respect cannot be accomplished without much thought and attention, and the writer would suggest that those who contemplate building make up their minds to give much time to the personal supervision of all details, if they hope to find a finished product as they had planned.—Carl Roesch.

WATER SUPPLY FOR PUBLIC USE.

WITH the decrease in surface water supply, due to cutting down the forests and meteorological changes, the population has increased enormously, cities have grown together, the country population has become more dense, and the danger of pollution of surface streams of water has increased a hundred-fold. As the years go on, and population and industries multiply, the question will become a more and more important one.

Filtration has not proved as successful as some of its enthusiastic promoters had hoped. Such plants usually cost many times over the expense of a good artesian supply. In one of the finest interior cities, using about twenty million gallons, it was found that, everything figured in, filtered water delivered to the user actually costs four to five times as much as would an air lift supply.

Artesian or Well Supply.

Many of our interior sections must depend upon well water, and there are few districts where an ample supply is not to be secured from wells properly made. This water is generally pure and wholesome. It is also of uniform temperature the year round—cool and pleasant in the summer, because the underground pipe and soil temperature remain uniformly low. In Winter, well water, being warmer than that taken from lakes and rivers, is not so apt to freeze, and from all considerations of temperature and purity, well water is greatly to be preferred. Many cities located on rivers having a gravel bed formation find that, by placing wells of suitable construction far enough back from the bank, there is a natural filter bed, leaving the water perfectly clear, even when the river itself is chronically muddy. When river or other surface water is good the wells may be drilled close to the edge, the water flowing down from the top of the wells.

Even when the supply near the surface is either scanty or unsafe, it is usually possible to sink driven wells to greater depths, thus "casing off" all suspected water and drawing only from deeper rock or gravel veins removed from all danger of surface contamination. The natural head from lower veins often maintains the water near the surface so that power only need be expended for moderate lifts.

There are not many underground formations where wells should be located close together. Such wells may affect or rob each other, and it is usually best to spread them out on a line across what is known to be the underground flow. Some finely creviced or tight rock formations have a strong head with but little capacity, and wells in such formations, if pumped hard, yield but little additional water. They should be scattered and pumped moderately, maintaining a low and economical lift. In other cases, one well in a group will give as much water as all together, and more territory must be drawn on. This introduces difficulties in detached pumping units and labor cost, which are well met with the air lift, as an economical central air compressor can be put in at the main pumping station and operated by the usual engineering force and the air piped to any distance or in different directions, and to any number of wells, no matter how scattered. In this way the entire corporation area is available for a supply. Air transmission is safe and clean; it is simple and easily controlled. There is little or no wear, and, once adjusted, the wells need no attention for years, the control resting in the speed maintained at the central station.

Uses for the Air Lift.

City and town water works, asylums and hospitals, plantations, railway water tanks, irrigation, private country houses, pumping mines, ice manufactories, breweries, cold storage and packing houses, textile mills, dye works, bleacheries, sewerage installations, dry docks, seaside water works, stock farms, etc. In fact, anywhere and everywhere that clear and abundant water is needed.

In many cases private water companies and cities have installed water meters to measure the amount used by manufacturing concerns, and the cost of water has therefore risen to such a point as to become one of the considerable expenses to any manufacturing plant. The insurance companies have also placed restrictions on such establishments and have made demands which make it desirable to have an independent water supply.

At the present time, after an extensive experience, two general systems have been devised for this purpose. One, known as the "Deep Well Pump System," for which a working pump is used, and the other the "Air Lift System," which employs compressed air to raise the water, by means of its inherent expansive force and the difference in specific gravity between compressed air and water.

The air lift involves the use of an air compressor, located where the expense of attendance is least; an air receiver adjacent to this compressor; a pipe line for conveying the air from the receiver to the wells; one or more wells drilled to a depth proportionate to the height of the lift and the depth of the water strata below the surface; air and water pipes running down inside of these wells, about one-half their vertical length being submerged when at work, representing the pumping apparatus proper. —From "Water Lifted by Compressed Air," published by the Ingersoll-Sergeant Drill Co., 11 Broadway, New York. Copies sent free to any reader who mentions Hardware and Metal.

PLUMBERS' TRIAL POSTPONED.

EVERY week develops a new sensation in the trials of the cases against the various branches of the plumbing trade for "conspiracy in restraint of trade." Last Friday the criminal cases were again brought before the Assizes, several witnesses being called by the prosecuting attorneys, amongst these being Messrs. B. J. Morris, secretary of the Central Supply Association, Thomas A. Stevens, of the Empire Manufacturing Company, London, Andrew Mann, of the Canada Brass & Supply Company, London, J. A. Berridge, builder, Joseph Harrison, ex-member of the Master Plumbers' Association, and others. Messrs. Stevens and Mann were cross-examined closely by the prosecuting attorneys in an endeavor to show that they were working in agreement with the Master Plumbers' Association not to sell to non-members of that body. Letters were produced showing that they had urged non-members to join the association. Agreements seized in the Central Supply Association's offices were also produced and the witnesses asked to identify them. The evidence of Josepn Harrison dealt with the School of Science job performed by Purdy & Mansell and W. J. McGuire & Co., the former doing the heating and the latter the plumbing. Mr. Harrison swore that $2,000 was added to the contract price, the money going to the association. Other evidence went to show that builders, etc., found it hard to secure plumbing supplies, jobbers refusing to sell to any but recognized plumbers and steamfitters.

* * *

Several incidents at the Assizes are of interest, particularly the action of the prosecuting lawyers in attacking witnesses as if they were criminals of the deepest dye. Secretary Morris refused to be brow-beaten and stated that he could not be induced to perjure himself by the attorneys. Mr. Mann, of London, did not come out of the cross-examination so successfully, being induced to contradict himself. Judge Clute granted a motion made by the lawyers for the defence that the Daily Globe be ordered to appear before the court because of the publication of grossly unfair comments on the case made after the plumbers' lawyers had appealed to the press for fair play in the reports of the trial. The newspapers have already found the accused guilty and as the judge seems to take an equally strong stand against them it would appear that nothing remains to be done except the passing of sentence and the naming of the fines. But the defence has yet to be heard and there may be some different evidence given when the case comes up again, an adjournment having been taken by the Assize Court from last Saturday to Monday, the 27th inst.

* * *

The sensation of the week was the confiscation of the books of Jenkins & Hardy, 15½ Toronto street, on Saturday last. Officers were placed in charge of the vaults and acting on the advice of solicitors the firm refused to allow their books to be interfered with. Crown Attorney Curry, however, took forcible possession and had an expert open the vaults. The books were seized and Mr. Curry is making a thorough examination of them in the hope of finding incriminating evidence. Messrs. Jenkins & Hardy were formerly secretaries of the Plumbing Supply Association and are now said to be secretaries of about 40 trade associations. Mr. Curry claims that there are about 70 "combines" in Toronto and other offices are being watched, it is said, in order to prevent papers being removed before the Crown officers have a chance to seize them. The wholesale grocers, the plasterers, other branches of the building trades, etc., are amongst the sections charged with having "combines" to govern trade. Nothing has yet been said of making a raid on the Bankers' Association, which sets prices, discounts, etc., on drafts and other financial documents, nor upon the Law Society, which is one of the closest corporations in existence, having a system of discipline few care to face. The trade in law is also restricted in numerous ways.

* * *

The cases against the plumbers and Jenkins & Hardy came up before Police Magistrate Denison on Tuesday but as the Crown Attorney had been unable to make a thorough examination of the latter firm's books an adjournment was taken until Tuesday, 28th inst. The week is therefore free of court investigations and the newspapers have the field to themselves.

* * *

The probable investigation of other "combines" tends to further confuse the issue against the plumbers, and public opinion, ever fickle, may look at the plumbers' investigation in a more rational state of mind on account of the widening of the investigation. In this case it may not be necessary to consider the proposition of asking for a change of venue if the plumbers feel that they cannot secure a fair trial at the present Assizes. There is some talk of the possibility of the cases dragging out until the public get tired of them. This is unlikely, however, as while Crown Attorney Curry has said the investigations may go on for six months or a couple of years, the cases now before the courts are likely to be threshed out completely at the January Assizes, if not sooner. This is well, as if there are any points in which the plumbers must change their plan of organization, the sooner it is done the better it will be for the trade.

* * *

Men's reputations are suffering on account of the newspaper notoriety and it would appear to be a wise move on the part of the members of the different associations to make a full and frank statement of their position in the press. The various details of the organizations will come out in the course of the investigations and the prosecuting lawyers and daily press will put the worst possible construction upon the evidence given. Only the supposedly damaging points in the minute books will be brought in as evidence by the Crown and favorable points will be overlooked. In this way the judge and the general public will have their minds poisoned before the accused have an opportunity of bringing out their defence.

Legal suits for the restoration of monies said to have been charged on contracts performed are to be entered by such firms as Warwick Bros. & Rutter, according to the press reports. On this job it is understood twelve plumbers and twelve steamfitters received "I. O.U.'s" for $50 each, making $1,200 as the sum the contractor will be sued for. In very few cases were the "I.O.U.'s" paid by the successful tenderers and in some cases the amount of the "I. O. U.'s" was struck off the price of the job. This, however, will not prevent considerable litigation resulting on this point.

* * *

The daily papers are calling upon the Provincial Government to proceed against the M.P.A. for the $2,000 added to the School of Science contract and the Dominion Government is asked to tear down the tariff on plumbing supplies in order to allow the dumping of American goods on the local market in competition with the Canadian made lines sold by the supply houses. The Dominion authorities are also called upon to appoint an official or commission to investigate the establishment of combines.

* * *

In Hamilton, London, Ottawa and Guelph the papers are making capital of the investigation in Toronto and endeavoring to prove that everyone who has had dealings with plumbers has been robbed. Men who demand a fair wage or a fair profit in their own business evidently consider that the plumber should do business on a one per cent. margin of profit and be able to pay his grocer, printer or butcher whatever the latter consider a fair margin.

* * *

It is difficult to sum up the case as it is looking more like a Chinese puzzle than ever. From the plumbers' standpoint the situation is a trifle more favorable than it was a week ago but the opening up of an investigation into other alleged "combines" may bring about a situation even more acute than at present exists.

COMBINED STEERING AND PROPELLING APPARATUS.

AN apparatus which is designed to steer and propel a steamer without the use of a rudder, and to reverse or check its speed without stopping the engines, has been invented and patented in Canada, United States and Great Britain, by S. W. Jennings, electrical contractor, 4 St. Antoine street, Montreal.

Expressed briefly, the principle is that of a pair of screws, one immediately behind the other, which revolve in opposite directions, but with the blades so arranged as to exert a propelling force in the same direction. These screws also furnish the means of steering, by being turned in an orbital motion, which thrusts the stern of the boat in whatever direction required.

This new invention is applicable to any style of engine, whether gas, triple expansion, or turbine. Indeed, as will be seen, the ideal system would be a vertical turbine engine situated right above the propellers, thereby making a direct drive.

The drawings, however, show the ap-

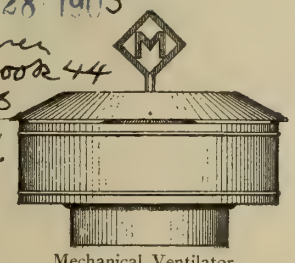
plication of a regular horizontal shaft drive. A hollow vertical shaft enters the stern above the water line and encloses a solid shaft which is connected with the steering gear. This solid shaft is held in position by supports from the hull, as is seen in the drawings, and close to the bottom a cross shaft is fixed, on which the screws revolve. The screws, which should run on roller bearings, are connected by bevel gears with the upright shaft, which, in turn, is driven by the horizontal shaft in the same manner. These two shafts are quite independent of each other in action, and friction between them is reduced as much as possible by ball bearings where they come into contact.

The solid upright shaft is connected with the pilot house in much the same way as the rudder, in the present system, an arrow on the indicator showing the exact direction in which the shaft is turned, and, therefore, the direction in which the boat is being steered. Whenever this shaft is turned, the screws are also turned in an orbital motion, thus driving the stern in this way or that, and changing the direction in which the ship is going. When it is found necessary to reverse, the shaft is simply turned half way around, without stopping the engines, and, as the blades will then be pulling the boat backward, the reverse motion will be accomplished almost immediately. If a sharp turn is wanted, the crank is turned about one-quarter around, with the result that an active force drives the stern around without propelling the boat forward. As this is far more effective than the mere dragging action of a rudder, it is claimed that a ship can be turned completely around in her own length. If it is desired to check the speed of the boat without stopping the engines, all that is required is to let go the steering wheel, thereby causing the engine to drive the propellers orbitically.

An important point in connection with this new invention is the fact that, by its adoption, bilge water will be practically a negligible quantity. The entrance of the main shaft is above the water line, and a tube screwed into the boat there runs up to the crown, which is even with the load line. Thus, a boat will have to be loaded up to above the load line before any water will be admitted into the hold, and even then the pressure will only be in proportion to the depth of the water above that.

Among the advantages claimed for this apparatus may be mentioned the obvious fact that it gives the power of two propellers with the draught of one. It will be inexpensive, the additional cost for a 30-foot boat being only about $50. The engines need not be stopped for the reverse or any other action, while the momentum may also be stopped without interfering with the engines.

Finally, the rudder is done away with, and the boat can be turned in its own length without any careening action. This latter claim has been substantiated by the tests Mr. Jennings has made with his small model, which was made without a keel and with a round bottom, so as to invite a careening action, if such were possible.



It is understood that a company is about to be formed for the manufacture of this apparatus, and much interest will be taken in its outcome.

MECHANICAL VENTILATOR.

VENTILATION is being brought more to the fore with each succeeding year. The subject is a refuge for doctors, and a matter which is meeting with the constant pleas of health officers and the sanitary bureau. The better educated of the people of the day are commencing to realize that ventilation poorly conducted is conducive to pneumonia, tuberculosis, skin diseases and even indigestion, and that unless ventilation is carefully looked after, the doctor's visits become more regular. The tremendous impulse given to the better airing of our houses will soon become general and will undoubtedly tend to prolong the vitality of the average man. There is a general movement in favor of practical ventilation of some kind, and the argument of the ventilator is plausible.

The molecules composing air are more mobile than those composing water. They slip over each other with the greatest rapidity. It is therefore the effort of makers of stationary ventilators to design them so that all outside currents of air are converted into air move-

Add.

Mechanical Ventilator.

ments parallel with the lines of the flue openings, viz., upwards.

The greater portion of the time, however, there is practically no outside movement of the atmosphere. At such times the stationary ventilator should offer practically as good an opening from the flue as though it were an open pipe. Two requirements are necessary; the outside air should not be able to get down the flue; two, the ventilator should be an open pipe when the air outside is stationary.

The construction of the Mechanical Ventilator is shown in the accompanying illustration. It is to be noted that there is very little deflection necessary for the air to pass out of the openings. A wide range of openings and a large number are provided. These characteristics enable the Mechanical Ventilator to exhaust the air from the interior when the outside air conditions are still.

Considered as a mechanical injector, there is said to be no possible direction from which outside air currents can strike the Mechanical Ventilator without becoming converted at once into an aid for exhausting the air in the building through the flue.

The Mechanical Ventilator is said to be absolutely storm proof and not penetrable by water, sound or any of the outside elements which might come down the flue. It is subject to nothing except an upward draught. Special attention is called to the circular opening between the outside band and the outside cover rim. A great part of the success which has attended this ventilator is due, it is said, to the novel construction of these features.

This ventilator is manufactured by the Mechanical Metal Manufacturing Co., 369 Bourse Building, Philadelphia, Pa. The manufacturers will be pleased to furnish additional information upon request. When writing for their booklets mention Hardware and Metal.

WILL IT STOP RAINING?

IN these days when policemen's blue papers are about as plentiful in Toronto plumbing circles as raindrops are in Vancouver in Winter time, there is much speculation as to what will happen next. Events follow events so fast that the plumbers are wondering when the end is to be. A reporter called on Secretary Meredith the other day and asked him if he thought a settlement was likely to be reached soon.

"All I can say," said the Master Plumbers' secretary, "is to tell you a story illustrating how I feel about it. When we were down at Atlanta a few months ago Fred Armstrong went out driving one morning in an open carriage. He had on his light white togs and looked very swell. When he got out in the country several miles it started to rain. Fred did not know whether to go on or turn back. He saw a countryman plodding along in the distance, so he drove up to him.

"'Now, my man,' said Fred, 'can you tell me if it is likely to stop raining?'

"The countryman paused a moment, surveyed the outfit in silence and replied, 'Wa-al, it always has.'

"Now," said Mr. Meredith, "that is what I'll say to you."

PLUMBING NEWS.

A banquet was held in Moose Jaw on Tuesday, November 21st, to celebrate the completion of the new waterworks, sewerage and electric light system in that thriving town.

Sheldon & Sheldon, Galt, have just completed the installation of a new heating system for the Gurney-Tilden Co.'s buildings at Hamilton.

The Kerr Vegetable Evaporating Co. are installing an electric light plant at Canning, N.S.

S. Shepard has opened an electrical supply store at 177 Sparks street, Ottawa.

A small fire occurred in the plumbing shop of G. Julian, Ottawa, last Monday. About $100 damage was done.

Announcement of the establishment of a new company to manufacture cast iron radiators in Toronto will be made shortly. A manufacturing site has already been secured.

The Canadian District Heating Company, Limited, which has been incorporated with a share capital of $250,000, proposes to establish a central plant at some point in the southern part of Hamilton and to heat a large number of buildings in the business district. No doubt if the enterprise proves successful the company will extend its operations and take in the residential districts also.

PLUMBING MARKETS

QUEBEC.

Office of HARDWARE AND METAL,
232 McGill Street,
Montreal, November 24, 1905.

CONDITIONS, locally, are almost identical with those of last week, though, if anytihng, the market has stiffened somewhat.

The week has been remarkable for a continuance of the shortage in iron pipe. The situation is true generally, but the manufacturers state that the sizes in which the shortage is most noticeable differ from day to day.

Iron pipe fittings are also very scarce. It is almost impossible to get deliveries from the foundries in this part of the country. This shortage is more keenly felt this week than at any other time during the season.

In spite of the continued strength of tin, and repeated advances in pig lead, prices on solder have not changed locally. A strengthening in tone has been the net result.

Range Boilers—Business is brisk at unchanged prices. We quote as follows: Iron clad, 30 gallon, $6.00, and 40 gallon, $7.50 net; copper, 30 gallon, $22.00; 35 gallon, $24.00; 40 gallon, $28. The discount on copper boilers is 15 per cent.

Lead Pipe— As pig lead continues to rise in price, the present figures on lead pipe are becoming firmer than ever. It would not be surprising to see new discounts given before long. We give the following discounts: Discounts twenty-five per cent f.o.b. Montreal, Toronto, St. John, N.B., and Halifax; f.o.b. London, 15c. per hundred lbs. extra; f.o.b. Hamilton, 10c. per hundred lbs. extra.

Iron Pipe Fittings—The scarcity previously reported is growing more acute than ever. It is extremely difficult to get deliveries. We quote: Discounts on all sizes of nipples up to 6-inch, 67 1-2 to 70 per cent.

Iron Pipe—The shortage which has confronted the trade for some weeks past is still very pronounced. Many sizes are scarce at present. Standard pipe in lots of 100 feet, regular lengths, 1-4 inch, $5.50 3-8 inch, $5.50; 1-2 inch, $8.50; 3-4 inch, $11.50; 1 inch, $16.50; 1 1-4 inches, $22.50; 1 1-2 inches, $27.00; 2 inches, $36.00; discounts on black pipe, 1-4 inch, 62 per cent.; 3-8 inch, 62 per cent.: 1-2 inch, 71 1-2 per cent.; 3-4 inch, and upwards, 73 1-2 per cent. Discounts on galvanized pipe: 1-4 inch, 47 per cent.; 3-8 inch, 47 per cent.; 1-2 inch, 61 1-2 per cent.; 3-4 inch and upwards, 63 1-2 per cent. Extra heavy pipe of 100 feet lots are quoted as follows: 1-2 inch, $12.00; 3-4 inch, $15.000; 1 inch, $22.00; 1 1-4 inches, $30.00; 1 1-2 inches, $36.00; 2 inches, $50.00. The discount for black pipe is: 71 per cent., and for galvanized 61 per cent.

Soil Pipe and Fittings— Goods are moving very freely at the same prices as for some weeks past. We give the fo'lowing discounts: Standard soil pipe, 50 per cent. off list. Standard fittings, 50 and 10 per cent. off list; medium and extra heavy soil pipe, 60 per cent. off. Fittings, 60 per cent off.

Solder—Though both tin and lead have been advanced this week, we have not yet changed our prices in solder. Our quotations remain as follows: Bar solder, half-and-half, guaranteed, 21c.; No. 2, (wiping solder) 17c.

ONTARIO.

Office of HARDWARE AND METAL,
10 Front Street East,
Toronto, November 24, 1905.

WITH the exception of a slight falling off in trade on account of the law cases before the courts in Toronto, business is said to continue very lively. The disturbance in the city trade is allowing the supply houses to catch up with their orders and shipments are large, particularly of enamelled goods.

New lists of prices issued by the Standard Ideal Sanitary Co. are reported this week, the changes showing an advance on account of the increasing cost of raw material. It is expected that the present figures quoted on sinks will not hold, however, and a slight drop is likely.

Lead is very firm and a further advance is being talked of. Iron pipe is also unsettled, each dealer having a different schedule of quotations. The prices quoted this week are about the average, however. Some dealers are lower, but the talk of a second advance is strengthening the market.

Lead Pipe—The market is very firm and there is some talk of another advance. Our quotations are as follows: Lead, 7c.; lead waste pipe, 8c.; discount, 25 per cent.

Soil Pipe and Fittings—Buying is very active owing to the rush of opening the ground before it is frozen up. Our quotations are as follows: Medium and extra heavy pipe and fittings, 60 per cent.; 7 and 8 inch pipe, 40 and 5 per cent.

Iron Pipe—All kinds of quotations are given by the various supply houses, but those given below are about right. We quote as follows— Black, 1-4 inch, $2.09; 3-8 inch, $2.09; 1-2 inch, $2.39; 3-4 inch, $2.98; 1 inch, $4.27; 1 1-4 inch, $5.84; 1 1-2 inch, $7.01; 2 inch, $9.35; 2 1-2 inch, $15.00; 3 inch, $19.35; galvanized, 1-4 inch, $2.91; 3-8 inch, $2.91; 1-2 inch, $3.22; 3-4 inch, $4.13; 1 inch, $5.93; 1 1-4 inch, $8.09; 1 1-2 inch $9.71; 2 inch, $12.95; 2 1-2 inch, $21.45; 3 inch, $28.05.

Iron Pipe Fittings—Trade is quite active owing to the heavy demand for heating supplies. We quote: Cast iron, elbows, tees, crosses, etc., 65 per cent.; cast iron plugs and bushings, 65 per cent.; flange unions, 65 per cent.; nipples, 75 per cent.; iron cocks, 60 per cent.; Canadian malleable, 35 per cent.; American malleable, 25 per cent.; malleable unions, 65 per cent.; malleable bushings and plugs, 60 per cent.; C. I. ceiling plates, plain or N. P., 70 per cent.; C. I. floor, 80 per cent.; hookplates, 60 per cent.; expansion plates, 65 per cent.; headers or branch tees, 65 per cent.; ring hangers, black or galvanized, 60 per cent., American list.

Galvanized Iron Range Boilers—Demand for boilers is very brisk as many contracts are being completed. We quote: 12 gallon capacity, standard, $4.50; extra heavy, $6.50; 18 gallon, standard, $4.75; extra heavy, 6.75; 24 gallons, standard, $4.75; extra heavy, $6.75; 30 gallon, standard, $5; extra heavy, $7.50; 35 gallon, standard, $6; extra heavy, $9.50; 52 gallon, $11; extra heavy, $14; 66 gallon, standard, $18; extra heavy, $20; 82 gallon, standard, $21; extra heavy, $24; 100 gallon, standard, $29; extra heavy, $34; 120 gallon, standard, $34; extra heavy, $40; 144 gallon, standard, $47; extra heavy, $55. The discount on copper and range boilers continues at 15 per cent.

Solder—There is no falling off in the prices of metals and solder keeps firm at the prices quoted: Bar solder, half-and-half, guaranteed, 20 1-2c.; and wiping at 19c.

Enameled Ware—Revised quotations are given below, the advances on baths being $15. Lavatories are also quoted at smaller discounts, while sinks are quoted considerably higher. Our new quotations are as follows: Baths, rolled rim, 5 feet, 2 1-2 inch rim, first quality, $18.65; special, $16.65; 3 inch rim, first quality, $19.15; special, $18.15; 5 1-2 feet, 2 1-2 inch rim, first quality, $20.15; special, $18.15; 3 inch rim, first quality, $21.65; special, $19.65. Lavatories, discounts, first quality, 30 to 30 and 5 per cent.; special, 30 and 10 to 40 per cent. Sinks, 18 x 30 inch, flat rim, first quality, $2.55; special, $2.40.

HAMILTON BRASS FOUNDRY

CHADWICK BROS. have enlarged their works in Hamilton by the erection of a new factory 65 by 150 feet and a new foundry 90 by 50 feet, in which they will continue the manufacture of gas and electric fixtures and art metal goods. The new factory is heated by the hot blast system and is fitted up with private and general offices. Another important feature adopted by the firm is a system of lockers and a lunch room for the use of their employes, each man having a basin and a locker for his own use. The lockers are numbered and the men are able to lock up their clothes while working. The foundry is equipped with ten fur-

RAMSAY'S ALUMINUM PAINT

The beautiful silvery Paint—better and cheaper than silver—must be made right for right effects. Splendid for store fronts, stove-pipes, radiators, decoration work and a hundred wants. Mixed ready for use, in handsome tins from ¼ pint up.

naces and the arrangements are now being made to use natural gas for melting the raw material. All floors are made of cement and the roof is ventilated the whole length of the building in order to carry off the fumes from the brass.

Messrs. Chadwick Bros. will continue their show room on King street. The firm is composed of four brothers, all being practical men. Ten years ago when the firm started business they did not employ any extra hands, but one hundred and five employes are now on the pay roll. New branches of work are now being taken up and if the business continues developing it will soon be one of Hamilton's most important industries.

A ROPE PIPE WRENCH.

Pipe wrenches made of rope are illustrated in the accompanying cuts, Figure 1 showing a "one man" wrench in which the ends of the rope are held in one hand while the toggle is pulled with the

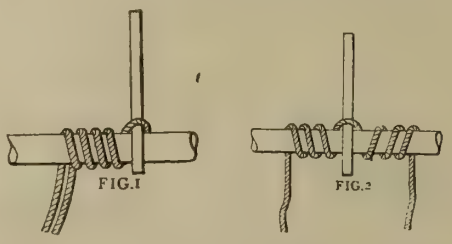

FIG. 1

FIG. 2

other. The wrench arrangement shown in Figure 2 is for heavier work and requires two men, one to hold the rope ends and the other to handle the toggle.

A ZINC ALLOY.

A ZINC alloy which is easily worked and stands rough usage better than white metals made with lead as a base, may be made by using 88 lbs. of zinc, 10 lbs. of copper, and 2 lbs. of aluminum. By using 12 pounds of copper and no aluminum the alloy will be made harder. The process of melting is as follows: The copper is first melted and enough cold zinc is added to kill it and to prevent it spitting when added to the bulk of the zinc. The zinc is melted separately and the copper poured into it, and the mixture is stirred. The aluminum is added after the copper and zinc have become perfectly fluid, and the mixture is thoroughly stirred. It is then cast into one inch plates, which are cooled, broken up and remelted under small charcoal. The alloy should be poured into horizontal sand-covered molds. The surface of this alloy resembles oxidized silver, and may be filed and polished. It cuts to a file similar to grey iron.

MUELLER
WATER PRESSURE REGULATORS

REGULAR PATTERN.

C-100

When fire pressure is permitted to reach the faucets it causes their parts to vibrate so hard when they are open that they wear out prematurely.

A Mueller Pressure Regulator will restrict fire pressure to the main but allow a full sized gentle stream at the faucets that will not cause excessive vibration of their parts. Its use will ensure longer life to the faucets.

Mueller Pressure Regulators for domestic use are made in two patterns, regular and low reducing. The former will regulate to a medium low pressure only, while the latter will regulate to as low as zero if desired. The Regulator illustrated is the regular pattern.

Each Regulator bears the Mueller trade mark and is *unconditionally guaranteed.*

We also make a full line of ground key, compression and fuller work for plumbers' use. Catalogs upon application.

OIL STOVES

Now is the time to place your orders for Spring importation.

These Stoves have attractive Japanned or Granite bodies, with cast iron rims and bases and neatly bronzed cast iron stands.

We are also showing a big variety of other patterns.

Books for Plumbers, Steam Fitters, Etc.

Furnace Heating

By W. C. Snow.

The author has prepared a book of reference for the furnace man or the architect. There are tables which have been tested by years of practical use. They are of great value to the practical furnace man.

170 pages, 6 x 9 in.; 90 illustrations; cloth bound.

Price, post paid, - - $1

(This book has had a heavy sale in Canada.)

* * *

Kitchen Boiler Connections.

A selection of practical letters and articles relating to water backs and range boilers.

The work is divided into two parts, the first on water backs and boilers and their connections, and the second on heating rooms from range boilers, a topic that has much practical interest to the plumber. There are few lines of work where so many little difficulties arise, and therefore the discussion of different questions which have arisen should be of great interest as well as practical value to workers in this line.

Fifth enlarged edition; 194 pages; 6 x 9¼ inches; 113 illustrations.

Cloth, post paid, - - $1

* * *

Formulas and Tables for Heating.

Being German formulas and tables for heating and ventilating work, for those who plan or erect heating apparatus. By J. H. Kinealy, M.E.; 56 pages; 4½ x 7 inches; leather.

Price, post paid, - -

* * *

American Sanitary Plumbing

By J. J. Lawler.

For plumbers, steam fitters, architects, builders, apprentices, etc. Containing practical information of all the principles involved in the mechanics and science of modern plumbing, illustrating with original sketches the fundamental principles of everything the plumber should know. Everything explained in the most simple language, so that it will be impossible to misunderstand anything.

Large 12mo, cloth, post paid, - $2

Steam and Hot Water Fitters' Text Book.

A book prepared for the Steam and Hot Water Heating Course at the New York Trade School, with supplementary chapters on house heating, specifications and surface estimating; by Thos. E. McNeill.

This book will be appreciated by those who wish to master the principles of steam and hot water heating. The definitions in the beginning deal with the appliances, and little by little the reader is led on until at the close he is informed how to figure surfaces, lay out plans and install heating apparatus with the necessary piping.

140 pages; numerous illustrations and diagrams; 5 x 7 inches.

Cloth, post paid, - - $1

* * *

Plumbing and House Draining Problems

A selection of articles for practical plumbers.

This volume provides reliable and practical information for ready reference and assistance to plumbers who are confronted by problems with which they have had no previous experience. One-half of the edition is devoted to new problems and special articles. This book will prove a valuable reference in any plumber's library.

297 pages; 6 x 9 inches; 146 illustrations.

Cloth, post paid, - -

* * *

Practical Gas Fittings.

Describing how to run mains, lay pipes and put up gas fixtures. 116 pages; 54 illustrations; 5¼ x 8 inches.

Cloth, post paid, - - $1

* * *

Practical Hints on Joint Wiping.

A book containing articles on practical joint wiping for beginners in plumbing, with an appendix giving a selection of practical letters and articles.

66 pages; 5½ x 8; 41 illustrations.

Paper, post paid, - - 25c.

A SQUARE DEAL
FOR
Square Dealers

Square dealers, we take it, are those who try to give their customers goods that are "square" —honest all through. For forty years we have been giving all dealers the "square deal."

We make all the "ENTERPRISE" hardware specialties just as good as we know how—then we go out and tell the public of all the world about their merits. Square Dealers ***distribute*** them—they are already ***sold.*** Just ahead is the big demand for

"ENTERPRISE"

Meat and Food Choppers and "ENTERPRISE" Sausage Stuffers, Lard and Fruit Presses. They are being widely advertised now to the public. Write for our literature about them, including our new catalogue of all the "ENTERPRISE" specialties. Get ready for the biggest season you have ever seen on "ENTERPRISE" goods. We are ready. Get your share.

Increase your sale of "Enterprise" Meat and Food Choppers by using our new Booklet: "The Cook, Her Critic and—." We will send you a supply of these on request.

FEATHER WEIGHT

MIC-MAC SKATE

RETURNED MAY 9 1906

THE RELIABLE BOYS' HOCKEY

Here are three skates which in their respective classes cannot be excelled. The ***Starr Hockey*** is noted for its rigidity, strength and lightness. The ***Featherweight Mic-Mac*** also for its light weight, but especially for its design and general efficiency, for the length of bearing surface on the ice ensures great speed. The ***Boys' Hockey*** is pre-eminently the leader among low-priced skates, being built to stand the rough usage given it by boys.

RETURNED MAY 9 1906

THE "MIC-MAC" HOCKEY STICK

This stick has the correct shape, weight and balance, and as the grain of the wood runs to the curve of the stick, it is practically unbreakable and therefore very satisfactory to hockeyists. Beware of imitations, for the name "***Mic-Mac***" on the blade is registered, and anyone selling such, which are infringements, render themselves liable to prosecution.

$1.00 Post Paid

Manufacturing Cost

By H. L. C. Hall

This book is a new departure in the way of a book on "cost accounting." In it you will find treated the principles of the science instead of a description of what some one else has done. Other people's systems do not interest you unless you can apply them to your own uses, hence only those which can be applied to your own needs are touched upon.

The Buyer, The Manager, The Superintendent, The Book-keeper, The Secretary, The Sales Agent and all those interested in knowing "what it costs" should secure a copy. Send for circular

THE BUSINESS MAGAZINE

Our Splendid Home Publication For The Busy Man and His Family

Read this Unsolicited Testimonial

"Viator," writing in the Free Press, St. John's, N.F., says : "The MacLean Publishing Co of Toronto have recently issued a new magazine, or rather re-issued an old one in a new form. The Business Magazine, as it is called, is one of the most interesting of compilations. It is more than interesting, it is useful and instructive. The Review of Reviews has done much for the literary world, as has Littell's Living Age, World Wide, the Rapid Review, and kindred publications. What these papers are to the literary student, or to the man in the street. The Business Magazine promises to be to the business man, a compendium of all that from the business standpoint is best, brightest, most readable and most instructive in the magazines of the world. The publishers may well refer to it as 'The Home Magazine of the Busy Man and His Family.' If the first number is a sample of what is to follow, I should advise every business man who wants a good thing and knows how to appreciate one when it is to be had, to send a year's subscription of two dollars to the publishers at Toronto. This may look like an advertisement. It is at least wholly gratuitous and unsolicited, being the result of one of the most pleasant and instructive evenings spent by my fireside, with The Business Magazine of October, 1905, as my companion. To keep up to the level of the October edition in succeeding numbers will be difficult, but the magazine is in good hands."

If you have not yet subscribed do so at once, while our special offer lasts.

HARDWARE ASSOCIATION ORGANIZED

IN very many respects the virile progressive west has set the pace for the rest of Canada, and in none more conspicuously than in the proper, effective organization of the retail hardware trade. As there is at present a movement on foot for the organization of the retail hardwaremen of Ontario along the same lines as the Western Retail Hardware and Stove Dealers' Association a short sketch of the development of the movement in the west may prove of interest. To the western readers of Hardware and Metal it is an oft-told tale, but readers in the east are probably not as familiar as they might be with the movement.

Winnipeg Association.

The present flourishing western association is the result of the development of the local Winnipeg organization. In 1901 the Winnipeg hardwaremen came to the sane and sensible conclusion that they had been cutting each other's throats long enough, that it was time to put an end to destructive competition, and that there were many common objects to be gained which could be achieved only by the united efforts of the whole retail hardware trade of Winnipeg. Consequently in the summer of 1901 an association of the hardwaremen of Winnipeg was formed and that association had some two or three definite objects in view.

The first object was to protect the retailers from themselves. Perhaps there had been more mutual jealousies, more suspicion and distrust, more price cutting among the retailers of Winnipeg than in any other town in Canada. The first thing necessary was to bring the dealers of the city together in order that they might become acquainted with each other and adjust differences. Having met in the association meetings and frankly discussed grievances and common objects it was comparatively easy to eliminate price cutting and to protect the whole trade from the unfair competition of a few dealers. The Winnipeg hardwaremen learned to trust each other. Before the association was formed any customer could bluff any dealer into giving him a cut price on nails, glass, building paper or some such staple merely by telling the dealer that he had been quoted such a price by so-and-so down street. These tactics don't work now.

Grievances Against Wholesalers.

But the Winnipeg dealers had other grievances. They had a grievance against the jobbing houses. The year 1901 saw a great impetus in the building operations of the city and a large proportion of the hardware trade of the city consisted of building supplies. Much of this trade in building supplies belonged legitimately to the retail hardware stores but they were getting very little of it. Small contractors were buying their supplies direct from the wholesale trade and the indications were that in a short time, unless decided action were taken, the wholesale houses would practically be doing a retail business in builders' supplies. That at least was the view taken by the alarmists among the retailers. Individual dealers could do nothing to stop this but the protest of the Winnipeg association proved effective. There were many large contractors whose business was so big that the retail trade did not want it ; they were quite willing that these men should buy from the jobbers. Accordingly a preferred list of contractors was prepared and it was agreed that to no other contractors should the jobbing trade sell builders' supplies. All others must buy through the retail dealers.

For three years the Winnipeg dealers enjoyed the benefits of their association and the experience of those years was sufficient to convince them that their organization could not well be dispensed with. There was, however, a strong sentiment that, to be really effective in presenting to the jobbers the views of the retail trade, it was necessary that the association should include not only the Winnipeg dealers but the entire hardware trade of the west. The Dominion Exhibition in Winnipeg in the Summer of 1904 seemed to afford an auspicious and convenient occasion for the holding of a convention of hardwaremen from the whole of the west. Accordingly the trade were invited by circular letter and through the columns of the trade press to attend a convention to be held in Winnipeg during the Exhibition.

Winnipeg Convention.

The response was encouraging as the register showed names of hardwaremen from all parts of the west. The Winnipeg dealers described their own local organization and told of the solid, substantial benefits derived from their organization. Their enthusiasm was contagious and it was decided to proceed with the organization of a western association. A constitution and a series of by-laws were drafted by a committee and adopted after a thorough discussion. Officers were elected and the convention was dismissed.

Steady Progress.

It rested then in great measure with the executive whether the association should make progress or whether it should be forgotten as soon as the convention had passed into history. Fortunately the officers were aggressive, pushing hardwaremen, full of confidence in and enthusiasm for the association idea. The president and secretary were J. A. Lindsay and W. W. Lindsay, both of the Ashdown retail store. Of course the fire that destroyed the Ashdown store a few weeks after the convention dispersed interfered somewhat with their plans, but the secretary in some way made time to keep in touch with the movement and the spontaneous response to the call for members was very encouraging. There was a large attendance at the February meeting and it was then decided to raise the fee to ten dollars per year and engage a permanent secretary to devote his whole time to the organization of the trade and the affairs of the association. A few weeks later the executive selected for the position a popular traveler, J. E. McRobie, and he has made a big success of the movement. The organization is extending and in a short time it will undoubtedly include the entire retail hardware and stove trade of the west.

Plan of Procedure.

Mr. McRobie is hard at work visiting the trade in all the western towns and organizing them in local sections. Each section arranges its own scale of prices on a few staples on which prices are usually cut and it is almost always possible to arrange these matters amicably. The Winnipeg prices are usually taken as a basis.

The organization is rapidly extending and it now commands the respect of all branches of the trade.

A TRADE NEWSPAPER PUBLISHER

LONDON'S new Lord Mayor is a trade newspaper publisher. Coming of a family of bankers, he began to follow in the footsteps of his ancestors, but was one of the first to see the tendency of modern time was to specialization.

He saw that there were many classes and communities which needed a more complete news service than the daily and weekly newspapers could afford to collect or publish. With his brothers he established the Grocer. This was followed by the Ironmonger and Chemist and Druggist. The first passed into the hands of his brother-in-law many years ago. Later the brothers established a similar series of papers in Australia.

The two surviving brothers, the Lord Mayor and Mr. Septimus Morgan, do not now devote much time to their publishing business. They visit their offices for an hour every Friday when they are in London. The real work is now being done by their sons and nephews. The boys are very wealthy in their own right—one of them being a multi-millionaire, yet they work extremely hard.

Under their fathers the papers were the greatest of their class in the world, but the young men are making them better still. It is said the editorial expenses of the Ironmonger alone amount to over $1,500 a week. In this they have a monopoly. Some years ago Mr. Ingram, of the London Illustrated News, and C. Arthur Pearson, who was then associated with him, had been

looking with jealous eyes at the Morgan Brothers great property, and started a paper to compete. They lost about $275,000 before they abandoned it, and the Ironmonger was stronger than ever.

The Lord Mayor as well as his brother have large investments in Canada. The former is a director of the Hudson Bay Co. The latter had more faith in Canada than Canadians themselves, for he bought heavily of Canadian Pacific around 40 and sold at about 150.

The position of Lord Mayor is no sinecure. He receives a large salary, but the expenses of the position will require him to spend from fifty to one hundred thousand dollars during the year out of his own pocket. His duties are quite onerous. Here are his engagements for an average day: 9.45 a.m., small committee at Mansion House; 10.45, magisterial work for about an hour and a half; 12.15 to 1.15, signing papers; 1.30, luncheon of about twenty; 3 p.m., public meeting re education in South Africa at Mansion House; 7 p.m., chief guest at dinner given by the Plumbers Company, one of the ancient guilds of the city.

The New Lord Mayor of London.
Walter Vaughan Morgan, one of the founders of our English contemporaries—The Grocer and The Ironmonger.

A DOUBLE PRESENTATION.

THE town of Rockland, Ont., was the scene of a pleasant social gathering last week, when "the boys" of the town met in the Rockton Hotel to say good-bye to James Bennie, who has been buyer for the W. C. Edwards Co., but who is now about to launch into business on his own account at Beachburg, Ont.

The prime mover in the affair was Mr. Rowe, principal of the high school at Rockland, to whom the success of the evening was largely due. When the fun was at its height Mr. Jack Binks came forward and read an address to Mr. Bennie expressing the regret of the boys at his departure, and Mr. Rowe then made the presentation of a beautiful engraved locket, to accompany the address. A surprise was then sprung on at least one gentleman in the gathering, when another locket, identical with the first one, was presented to Mr. Rowe, who has been principal of the local high school for eight years. In this case the address was read by Dr. Jovet and the presentation made by Mr. Taylor.

A number of commercial travelers who happened to be in town helped to enliven the proceedings with their witty speeches. Among the boys of the grip who contributed to the program were D. McNair, John Murphy (who was accompanied by his Sweet Caporal girl), C. D. O'Brien (the Irish comedian) and N. McElroy.

The sumptuous repast provided by Mine Host Tague was done ample justice to, and the boys parted in high good humor.

AUSTRALIAN TRADE OPPORTUNITIES.

D. H. ROSS, Canadian Commercial agent for Australia, in his report of Oct. 2, states that in Australia, where the thermometer rarely falls to freezing point, ice skating is an attractive novelty. A rink has been established at Adelaide and others are to be erected at Melbourne and Sydney. The necessary refrigerating machinery has been ordered and when the Australian Winter opens next June the sport will be enthusiastically taken up by our fellow colonists. The skates used at the Adelaide rink are mostly of an inferior character, and as there will be a large demand for skates of a superior article, Canadian manufacturers are urged to send sets of catalogues, illustrations and price lists, immediately, to the Canadian Commercial Agency, box 140, Melbourne. Fuller particulars can be secured from the Department of Trade and Commerce at Ottawa.

A new railway station, to cost $550,000, is to be erected at Melbourne, and metal ceilings and art steel goods to the value of about $60,000 will be required for the structure. Canadian manufacturers who desire to submit estimates should write the Ottawa officials for information at once.

Another contract to be given by the Australian Government shortly, for which tenders will be invited, is for a supply of 500 tons of copper wire, 600 lbs. to the mile, for the construction of a telephone line between Melbourne and Sydney.

REPORT ON COBALT ORES.

MANY facts of great interest regarding the development of the mining district in the neighborhood of Cobalt are contained in the second part of the Report of the Bureau of Mines which has just been issued. This volume contains a detailed account of the work done in the field by W. G. Miller, Provincial Geologist, in 1904, and the information is brought up to July, 1905. A complete account of the discovery of the area and its situation is given, while correspondence shows that although the Provincial Department had in its possession a collection of specimens and reports on the deposits yet the public did not realize the value of the discovery for fully 18 months after the strike was made.

Data is given regarding the rock formations of the district and the statement is made that while gold ores are profitable to work when they assay $3 to the ton, the Cobalt ores average $18 to the ton. A comparison with other districts shows that the area is unique in North America.

Those in Saxony and Bohemia resem-

ble the Ontario field. In the latter are all the groups of metals found in the Joachimstaal deposits of Bohemia, except pitchblende, the source of radium, and this may yet be found. The Old Silver Islet and other deposits near Port Arthur are more like those of Cobalt than any other in North America. The intermediate areas have been prospected only slightly, and may be productive of similar rich minerals.

The ores of the province, the report concludes, carry such big value in silver that they will be worked primarily for this metal, although those of Cobalt contain a much higher proportion of cobalt than those of New Caledonia. There are also by-products of value such as arsenic and nickel. The opinion is finally exprecsed that the ores of Ontario should control absolutely the market for cobalt.

TRADE INQUIRIES.

Correspondents desiring to get in touch with any of the firms referred to should quote the reference number when requesting addresses. For information write to Superintendent of Commercial Agencies, Department of Trade and Commerce, Ottawa.

No. 1094. A Scotch company manufacturing engineers' tools, woodworking machinery, cast iron baths, rain, water and soil pipes, heating and cooking stoves and general castings, would like to be placed in touch with Canadian importers who could handle these manufactures.

No. 1095. A Bristol firm who are buyers of pick and shovel handles, hay and manure fork handles, and basswood broom handles, 50 inches x 1 1-8 inches, would like to hear from Canadian manufacturers who can fill orders promptly.

No. 1096. A Staffordshire manufacturer of tiles and similar building lines is open to arrange with suitable Canadian importing houses to handle such goods.

No. 1098. Inquiry has been made by a London firm for the names of the leading nail makers in Canada.

No. 1106. A firm of mineral importers in Manchester, and a Lancashire manufacturing firm prepared to buy and smelt crude Cobalt under conditions, will welcome correspondence from Canadian producers and shippers of same.

No. 1109. A Manchester firm of machinery importers desires to correspond with Canadian manufacturers of machine tools, valves, pipe fittings and paper mill machinery.

No. 1110. A Lancashire firm of oil importers, now obtaining their supplies from the United States, would welcome quotations for naptha and creosote from Canadian producers.

No. 1119. A Lancashire firm handling large quantities of spade, pick and wooden handles, would like to hear from Canadian manufacturers who can fill orders.

No. 1121. An English manufacturer of every kind of door lock is desirous of being brought into touch with actual buyers of such goods in Canada.

No. 1122. Inquiry has been made for Canadian makers of towel rollers, rolling pins, pastry boards, chopping boards and domestic hardware.

HAMILTON, ONT.

"A 'C' BRAND FAMILY."

Editor Hardware and Metal.—Your good people up in Ontario have been lately treated to some homilies upon "race suicide," and you deserve it all, according to the census returns.

We do things differently down in this benighted Province of Quebec. As an example in point, one of our old employes, Mr. Antoine Labelle, a French Canadian, of course, as his name implies, told me on Saturday that he was the father of thirty children. 'Go, thou, and do likewise!" We claim the championship on behalf of this company.

CANADA HORSE NAIL CO.,
Wm. Smaill, Sec.-Treas.

NEW DRAIN PIPE.

The Dominion Sewer Pipe Co. has purchased from Mr. M. H. Rylatt, Boston, England, the inventor, the right for Ontario, Manitoba, and the Territories, to manufacture what is known as self-centering drain pipe. The essential feature of the new pipe is the presence in the socket of three tapered bars, running from the mouth of the socket almost, but not quite, to the end of the interior tube of the pipe. As the spigot of the second pipe is laid in the socket of the first, it rests on these three bars, which as it is pushed in guide it up to its exact position in the centre of the socket, giving what engineers call a "true invert"—in other words, a smooth interior join between every two pipes. The groove between the tapered bars and the base of the socket is simply to

provide a solid ring of cement all round the joint. The cost of adding these three bars is so insignificant that the new pipe can be made for almost the same cost as the plain pipe.

CATALOGUES, BOOKLETS, ETC.

When sending catalogues for review, manufacturers would confer a favor by pointing out the new articles that they contain. It would assist the editor in writing the review.

A Bookkeeper's Ruler.

JAS.SMART MFG. Co., Brockville, Ont., manufacturers of hardware, woodenware, stoves, etc., and agents for Kelsey warm air generator, are sending to the trade a very neat bookkeeper's ruler. Readers of Hardware and Metal who have not received one can secure one on request by mentioning this paper.

Attractive 1906 Calendar.

The cut herewith presented illustrates the new calendar for 1907, just issued

by the Harrington & Richardson Arms Co., Worcester, Mass. The calendar is beautifully lithographed, in colors, and will make a good ornament in any hardware store. Any reader of Hardware and Metal, who mentions this paper in asking, will receive the calendar promptly.

Railroad Motor Cars.

Fairbanks, Morse & Co., Toronto and Montreal, have issued catalogue number 101A, dealing with motor cars for railroad work. The designs shown are very unique, while full descriptions are given the magnetism of the various styles of cars shown. Readers of Hardware and Metal can secure copy of the catalogue by mentioning having seen the offer in this paper.

Business Devices.

Brass bound price card, hardware merchant card index records, etc., are described in leaflets issued by the David Williams Co., publishers of the Iron Age. The agents for these goods are The MacLean Publishing Co., Toronto. The illustrations showing samples of price cards, and the description of these time-saving business devices, are worthy of a great deal of study, and any merchant who desires to place the business end of his business on a more modern basis cannot do better than look into the systems adopted, particularly for hardware stores, by the publishers named above. Full information and descriptive matter will be sent on request.

Gasoline Soldering Iron.

An illustrated booklet from Emmelmann Brothers Mfg. Co., Indianapolis, Ind., shows the many good points of their gasoline soldering iron and blow torch. This apparatus is not an experiment, but an assured success. Ask the makers for a copy of this late booklet and mention Hardware and Metal.

Bolts and Screws.

The Standard Bolt & Screw Co., Limited, Toronto, recently incorporated, and who are rapidly getting their special automatic screw and nut-making machinery installed in their handsome new factory adjoining the Dundas street bridge, Toronto, have issued a catalogue and price list of the lines they will manufacture, including bolts and nuts of all descriptions, set crews, cap screws, studs, boiler patch bolts, stay bolts, machine screws, coach screws and steel taper pins. The catalogue illustrates in their various sizes and modifications the standard lines, but the company are prepared to make all classes of small parts and machine shop supplies in iron, brass, steel, German silver, silver and gold. Frank Jackson, formerly identified with the Diamond Machine & Screw Co., Limited, Toronto, is factory superintendent in charge. Mention Hardware and Metal when writing for a catalogue.

U. S. TARIFF ON STEEL.

The board of United States general appraisers recently sustained a protest filed by John J. Beck of Buffalo, and held that merchandise exported from the United States to Canada in the form of hoop or band steel and returned to that country as scrap steel is entitled to free entry, as articles of the growth, produce or manufacture of the United States.

The board further rules that free entry may be had without the production of a clearance certificate from that country on satisfactory proof of the identity of the articles, it being impracticable or impossible to produce such certificate, owing to the nature of the importation. Another point in the board's decision is that where the importer has made application for allowance of drawback on any portion of an importation, no refund of any duties will be allowed under paragraph 483 of the free list of the Dingley tariff law.

STOVES AND TINWARE

TIN PLATE OR GOLD BRICK.

UNDER the above heading Hardware and Metal last week referred to the failure of the Eastern Trust Company, an enterprise promoted in the United States by Messrs. Allison and Meldrum, two of the chief promoters of the Canadian Tin Plate & Stamped Steel Company, which proposes to establish a tin plate mill at Morrisburg.

In view of the connection of these promoters with the defunct Cramp Steel Company, of Collingwood, and the publicity we have given to the Morrisburg proposition in recent issues of Hardware and Metal we reproduce this week two articles from the United States Investor, of Boston, New York and Philadelphia. The first is from the issue of January 16, 1904, and reads as follows :

STOCKHOLDERS INSIST ON LIQUIDATION.

Among the trust companies which started in New York during the heydays of flotations was the Eastern Trust Company, the promoters of which were Messrs. Allison and Meldrum ; and the attorneys for the promoters were Messrs. Brown and Wells, who have been identified with numerous enterprises, a number of which have resulted disastrously.

Upon the first examination of the company by the banking department, the latter discovered that $50,000 commissions were charged by the above named gentlemen for this promotion, and the department insisted upon this amount being taken out of the surplus and written off.

Some time in April of last year Mr. Allison and other directors of the company tried to arrange for an exchange of the stock of this company for the stock of the Van Norden Trust Company. The exchange of stocks, it is claimed, would have netted the stockholders about $150, but the engineers of the undertaking took good care that they and their associates were to get above book value, which was, at the time, about $192 or $193. A well known brokerage firm in the street, which had put a great many of its clients into this stock, issued a circular at the time advising their clients not to accept the proposition of merging, taking the position that if the company was to be liquidated, its own stockholders could attend to it as well as any outsider.

A Laggard.

Ever since this movement the company has been a laggard. Its deposits, which had at one time run up to over $2,000,000, shrank gradually until late in the Fall of 1903 they had fallen below the million dollar mark. The statement of January 1, 1903, showed a profit of some $21,000. The statement of January 1, 1904, shows a profit of some $22 000. According to the company's own figures, therefore, the officers in charge of $2,000,000 of capital and surplus have been able to earn, in the course of 12 months, barely $1,000. In the statement of January 1, 1904, the officers, however, show that they are carrying their bonds at book value and not at market value. Deducting the difference between the actual market price and the cost price of the securities, the company in the 18 months of its existence has been able to show the remarkable results of an actual loss in the book value of its stock and the building up of a deposit line of barely $1,000,000.

Just Criticism.

Considerable criticism has been indulged in by those who have been in a position to know about the large amount of loans made to any one party, and the criticism has been justly made that a concern with barely $1,000,000 deposits is scarcely in a position to make several time loans of $300,000 to $400,000 in each loan. The published statement of the company is woefully lacking in information as to the amount of time loans, demand loans and call loans.

It is no wonder that there should be dissension in the board of managers of this concern, and that a number of the leading stockholders and directors are so thoroughly dissatisfied and disgusted with the past, present and future, and with the possibilities for getting business, that they have joined in a movement to force a liquidation of this institution.

Stockholders' Meeting.

Such well known men as Mr. Wm. G. Park, one of the directors of the Lincoln Trust Co. ; Mr. J. B. Bloomingdale, director in several financial institutions ; Mr. Charles Kimberly, a well known banker of New Haven, Conn. ; Mr. Ernest Werner, of the Stock Exchange firm of Werner & Broun, and Mr. A. A. Lisman, issued a call for a private stockholders' meeting, in anticipation of the annual meeting, to discuss the question of liquidation. This meeting, which was held in a Wall street law office last week, was, it is said, "packed" by the friends of the present management, who indulged in a good deal of speech-making, but who, when it came to a show-down, were able to master exactly 545 votes, whereas the gentlemen who issued the call own alone over double the amount of stock that the management represented, and had, in addition, proxies for several thousand shares.

Efforts have been made to rehabilitate this unsuccessful institution by asking for the resignation of all directors, so that their places could be filled by others. Several directors, however, have declined to resign under fire, but have decided to remain on the board, so as to be in a position to vote for liquidation of the company, whenever the opportunity shall present itself.

The annual meeting of the company will be held on the 20th instant, and it is likely that the management may hear some unpalatable truths by stockholders who have, for a year and a half, been patiently waiting to see some results in the increase of the book value of their stock, or in the establishing of a profitable line of deposits, and who have been disappointed in both these reasonable expectations.

Condition of Company.

Following is the statement showing the condition of the company as of December 31, 1903 :

The second article announces the death of the company as foreshadowed in the above article, it being published in the Investor on July 9, 1904. It follows :

TRUST COMPANY TO LIQUIDATE.

The usual aftermath of any boom is liquidation. It is not surprising, therefore, that the trend of the times in trust company circles is toward reduction in capitalization or the winding up of business. Following closely upon the announcement of the reduction in the capital stock of the Trust Co. of America from $2,500,000 to $1,000,000 comes the official statement to the effect that the Eastern Trust Co. will retire from business. The counsel of the company is quoted as follows : "This action is taken to avoid the customary receivership in liquidation. The plan avoids the necessity of receivership expenses and renders possible a disbursement of a larger proportion of the assets among the stockholders."

Stockholders' Loss Small.

Although the stock is quoted around 175, inasmuch as the capital of the company is $1,000,000 and the surplus $950,000, approximately 190 should accrue to the stockholders. The liquidation of the assets should afford no difficulty, these consisting as per report of December 31, 1903, of $52,937 Union Pacific convertibles, and $1,331,000 New York city

bonds. The winding up of the Eastern Trust Co. will not come as a surprise, an effort having been made in this direction last January. The company was never very successful, as will be perceived by the fact that during the two years of its existence profits amounted to only $22,000, $21,000 of which was earned during the year ending December 31, 1902. In other words, during 1903 the company, with a capital and surplus of $2,000,000, has been able to earn only $1,000.

A PHILADELPHIA FAILURE.

The New York Herald of September 23, 1905, gives another account of the shipwreck of one of Messrs. Allison and Meldrum's enterprises, this time the enterprise being the Philadelphia Steel & Iron Company. The article follows :

"Developments in the bankruptcy proceedings against the Philadelphia Steel & Iron Company have brought to light an underwriting syndicate that may find its operations unprofitable, filled the air with rumors of suits and disclosed another promotion of the firm of Allison & Meldrum which did not meet with success.

"The syndicate consisted of a number of brokerage firms including Allison & Meldrum, of New York, Chicago and Canada. This syndicate, it is asserted, underwrote more than $150,000 worth of what purported to be the first mortgage bonds of the company, and now creditors allege that the amount named did not constitute a first lien and that there was a prior one of $25,000.

"The creditors mentioned in the bankruptcy proceedings are the Lancaster Trust Company, of Lancaster, Pa. ; Isaac J. Greenwood, of New York ; Charles F. Hickey, of Brooklyn, and F. L. Crocker, of New York. In addition to the sale of the assets of the company it is announced that there will be suits against each of the underwriters individually for the amount of their subscriptions.

Organized New Concern.

"The Philadelphia Iron & Steel Company is the successor to the Farrell Carbon Casting Company, of Philadelphia, which had a process for making Atlas steel. Through Alfred C. Rex and Chas. F. Walter, of Philadelphia, it is declared that Allison & Meldrum obtained possession of the plant and the patents of the company, organized a new concern, with a capital stock of $1,000,000, and issued $300,000 in bonds to meet the costs of incorporation and patents. Allison became president, with Meldrum second in command.

"Allison & Meldrum, being unable to float the bonds, went to Flint, Jones & Co., in Wall street, offering them $4 a thousand to underwrite M. Flint, Jones & Co., now Flint, Bacon & Co., organized the syndicate, and with that list of names the promoters went to the Lancaster Trust Company and borrowed $35,000. There were several outside purchasers, among them Greenwood & Hickey. About $50,000 in bonds were actually sold and how much in stock is not stated.

"The bond purchasers, discovering that they in reality held them subject to a prior lien of $25,000, began suit against Allison & Meldrum, in the United States Court, but this action was dropped when the standing and liability of the underwriters was ascertained. The taking of testimony from the members of the syndicate, it is said now, is for the purpose of discovering the assets of the company. Some of the New York members have already been examined by F. L. Crocker, who is attorney for the bank and other creditors. General Greene, who lives in Buffalo, will be examined when he comes to testify in the asphalt case. So soon as Messrs. Allison & Meldrum return from their trip to Canada they will go on the stand.

Mr. Allison's Record.

"The office of Allison & Meldrum is at present at No. 51 East Forty-fourth street in the same building in which Dr. W. Seward Webb has a suite. The career of the three men has been somewhat intertwined for several years, Mr. Allison being at one time connected with the Wagner Palace Car Company, of which Dr. Webb was the head. They were also identified with the Automatic Telephone and Electric Company and Mutual Automatic Telephone.

"J. Wesley Allison and Garnett H. Meldrum are Canadians, Mr. Allison coming to New York city in 1891 as the United States agent of the Canadian Government Railway system. He is known in the business world as a promoter and has appeared in the directorate of many companies. One of his early companies was the George Washington Lighting Company. Others were the Woods Motor Vehicle Company, until its reorganization in 1902 ; the Storage Power Company, Columbia Electric Car Lighting and Brake Company, the Guaranty Development Company and the Artificial Lumber Company of America. In 1902 he appeared as a director of the American Cold Storage Shipping Company, the Depew Syndicate and the Cramp Steel Company, Limited, of Collingwood, Ont. ; the Eastern Trust Company, the Middletown Greenfield Railway Company, the National Leather Mat and Belt Company, the Pacific Coast Iron and Steel Company, the Para Rubber Plantation Company and the Picacho Blanco Mining Company of Arizona. He was also a director in 1902 of the Montreal and Boston Copper Company."

A NEW LANTERN.

E. T. WRIGHT & CO., Hamilton, Canada, beg to draw the attention of the trade to their latest improved patent of the Cold Blast Lantern, which they claim makes it the strongest and best Cold Blast Lantern now on any market. The improvements are as follows : First, the globe holder has not the perforations in its side. Second, constructing a ring around the base of the hood with perforation thereon. Third, placing a series of perforations on the upper part of the globe holder, for the purpose of feeding double the volume of air to the tubes, making it so more air and less oil is burned, which is an immense saving. Fourth, forming a solid hood to the lantern, with side openings. These four valued improvements make it impossible to extinguish by swinging, shaking, or by any other ordinary means of usage.

TIMELY SUGGESTIONS.

One reason why some stove merchants do not sell more stoves is that they do not know enough about the goods. They pay little attention to detail. The traveler comes along and tells them what a good line of stoves he sells. They believe it—without paying much attention to the good points that he emphasizes—and put in the line. When a possible customer wants to buy a stove the merchant is ignorant of the advantages of the line. He does not know that the oven is bigger than in other stoves of the same number, nor that the lining is extra heavy, nor that the grate is an interchangeable one. He knows none of the good points of the stove and therefore cannot do any more than talk in a general way about it. Maybe you think this does not apply to you. Try it on and see. See if you know every feature of the stoves you sell. What kind of fuel will that one burn best ? Can it be changed from coal to wood easily ? Can an oven door thermometer be fitted on? At how much additional cost? Is the oven large ? Is the clean-out easy ? Is the ash pan large ? Is the fire box well lined ? What is the lining of the reservoir ? These are some of the questions that are likely to come up in selling a cook or range. Then with the heater there are others. What is the best fuel? Will the stove gold fire well? Why will it warm the floor ? What is the hot blast feature ? Why is it economical in fuel ? Are the ashes easily emptied ? The man who starts out to sell stoves should be able to answer these and a hundred other questions in regard to the goods. Put in your spare time looking up the answers.—The Hardware Trade.

GOLD VARNISH FOR TINPLATE.

Leave 2 pounds of finely powdered crystals of acetate of copper for a long time in a warm place, says an exchange. Rub the powder as soon as it has changed to a pale brown with oil of turpentine, and mix it with 6 pounds copal varnish at 70 deg. C. Solutions will be complete in about a quarter of an hour, and after standing a few days the varnish will be ready for use. Dry in artificial heat after application, for the exact color depends on the drying temperature. If good copal varnish is used the gold is very permanent, and adheres with great force.

STOVE TRADE HURT BY GAS.

"The natural gas flow is certainly killing the stove business in certain districts," said a representative of a stove manufacturing company in Kansas City recently. "We have been feeling the effect of the installation of gas for some time, but never so much as now. In the southeastern part of Kansas the trade is almost at a standstill. In some cases the old stoves have been made to burn the gas simply by inserting a pipe after cutting a hole in the bottom of the stove and installing a regular gas burner. The people through the district haven't been able to figure out why this city is not being supplied with the gas. We in our business can only hope that the supply is limited."

BE POLITE TO CUSTOMERS.

A REPUTATION for intelligence and truthfulness is indispensable to a permanent and satisfying success in the grocery business, and politeness is also among the few weapons that the small dealer has at his command to meet the competition of larger dealers who buy their goods more cheaply. But the larger the business the greater the number of hands required, and consequently the less chance of the customers being treated with difference. That these advantages are not fully realized and utilized by the average retailer is well known to all who come in contact with them. One important point in particular to be impressed upon your assistants is the necessity of careful and polite attention to the smallest customers. There is an old and trite adage which says, "When you buy keep one eye on the goods and the other on the seller, but when you sell keep both eyes on the buyer." Customers are drawn to the dealer who greets them cordially, treats them with civility, shows them little courtesies, manifests an interest in their wants and seeks to gain their confidence. Do not imagine that customers consider cheap goods and "cut prices" are the equivalent for such treatment, for if you do you will soon have to discontinue business for lack of brains or to be sold out altogether, although you may charge your misfortune to other causes.

HOLD YOUR TRADE.

While going out after new business, don't overlook the importance of holding your old customers. If old friends cease trading with you, try to find out what is wrong, and make it right. Try not to have any cause of dissatisfaction. If a customer makes a complaint, arrange the matter satisfactorily, even though it costs you something to do so.

Very few towns in Canada will equal Walkerville's record for building this year. The most costly single structure is E. C. Walker's new residence, costing $125,000. The new King Edward school, costing $50,000; Walker's rack house and new cooper shop, $40,000 each; the Globe Furniture Works, $40,000, and new residences bring the total for this year up to nearly $400,000.

REMEMBER THIS POINT

Our interest in you does not peter out at the selling point. The Gurney method is different. We have created a big demand for the Oxford lines by wide, strong and systematic advertising—and—stamping quality through and through every article we market.

But, we do not stop there. We keep eternally at it all over the country and you'll notice we don't forget YOUR territory.

We expected great results when we placed the

Our guarantee bond goes with each Range.

Imperial Oxford Range

on the market, but its prompt and big success topped the highest hopes of its designers. Year by year its sales have grown enormously until to-day its nearest competitor is far behind in the race for supremacy.

Why?

All practical men know just why. The exclusive features of the Imperial Oxford were bound to make it a winner and—what is more to the point—an easy, quick seller.

The Draw-Out Duplex Grate and frame prolongs the life of the fire-box because repairs can be easily effected without disturbing the linings.

The Diffusive Oven Flue delivers a column of superheated air into the oven and maintains an even temperature very pleasing to the most fastidious cook.

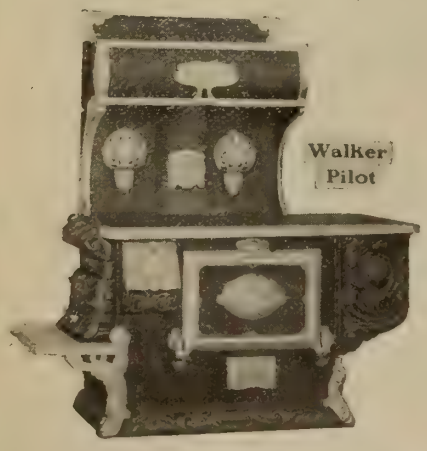
The oven is full-sized and square.

The fire-box is accurately proportioned, deep and straight.

The weight is there and every modern improvement in Range making is to be found in the Imperial Oxford. It is easily the handsomest range of them all and the easiest to sell.

It will pay you well to place the Imperial Oxford Range in a prominent place on your floor.

Send for Catalogue 61.



WE also manufacture Steel Plate Ranges, Gas Stoves, Ranges and Heaters, Hotel Ranges, Warm Air Furnaces and all kinds of cooking and heating apparatus, Plumbers' Supplies.

McClary Self-Basting Roast Pan

No Basting, No Waste, and Nothing to Watch But the Clock.

Do you realize what this means to you ?

It means that no matter what you roast—meat or fowl—all you need do is to put in the roast, with a little water in the bottom of the pan, and take it out when done—crisp, juicy, and roasted to a turn.

The reason why this Roaster roasts so much better, and bastes itself, is that all the steam which arises and bastes the bottom of the roast is made to drop down again on the top of the roast, because of the special construction of the top. (See picture.)

But that is not all.

The ordinary Roasting Pan not only requires a lot of basting and watching, but it also wastes a lot of the roast itself, as most women know from experience. Actual test shows that a 10 pound piece of roast beef will only weigh 8 pounds, or less, when roasted in the ordinary pan—a clear loss of 2 pounds, or one-fifth of the weight ; at this rate you do not need to have "roasts" very often before this waste amounts to $3 or $4 a month !

This big item of waste, as well as the necessity of basting and watching, are all entirely eliminated in the **McCLARY SELF-BASTING ROAST PAN.**

It takes up no more room, and it can be used on the top of the stove as well as in the oven.

NEW ADVERTISEMENTS.

Joy Manufacturing Co., Toronto.
United Factories, Toronto.

ANOTHER COAL STRIKE.

IT is asserted that the "Coal Trust" has stored 400,000,000 tons of coal in anticipation of a strike of the unions when the present agreement expires next Spring and that the miners have accumulated a fund of $2,000,000 for the same purpose. As 400,000,000 tons of coal is to $2,000,000, so is the strength of the mine owners compared to that of the miners. This is, however, still further aggravated by the fact that the former are few in numbers while there are many thousands of the latter. It ought not to be difficult to figure out beforehand which side will come out victor should the expected contest occur.

But if the strike occurs next April, as freely predicted, the ill effects of the controversy will not only be felt by the participants but also by manufacturers and merchants and the general public, who have no part in the contest. It is not too early, therefore, to discuss the situation and adopt ways and means of lessening the evils of the strike. The Iron Trade Review makes the novel suggestion that users of coal treat the commodity as insurance and purchase a policy before the strike really takes place. The Review says:

"The danger of a general strike of miners in both the anthracite and bituminous districts is now so great that we believe it will be wise for all manufacturers to purchase and store large supplies of coal, so that business will not be paralyzed by even a long cessation of mining. The expenditure involved in such purchases is really a payment for insurance. Men are usually willing to carry insurance on their lives and property when there is no immediate danger of fire or sickness. Far more reason is there for investing in insurance when it is almost certain that such protection will be needed."

The suggestion is a good one, so far as manufacturers are concerned, and it is one that can be acted upon to the advantage of many merchants. While it entails an initial expense, it must be remembered that the commodity is not a perishable one, and the cost of the investment is really only the interest on the amount invested and the chance of losing on such a plan is very small.

TWO STRONG CARDS.

MANY a retailer's stock needs more well kept want books and the more frequent use of the mail order.

Most merchants will confess that their stores have not want books enough and what they have are poorly kept. The stock runs short on some particular articles and the clerk or merchant fails to enter those items on the want list.

The day comes when calls for those articles are made and the stock contains them not. Then it is that the merchant is tempted to buy more than he should of those lines to make sure that the stock will not get short on them again.

In every scientifically handled store the want book and the mail order are coming to the front. Thus instead of buying it all in one lump to make sure the stock will not run short, the scientific merchant orders carefully and sorts up frequently. The want book is an important part of his system. The mail order is another.

These two features of good storekeeping save many a dollar from year to year when properly applied. Carrying expense is a big item and the want book and mail order help chip off a large piece of that expense. They assist the retailer to do business with less of his money tied up in merchandise. They teach him to leave as much of the stock as possible in the hands of the wholesaler and manufacturer until he needs it.

THE C. N. R. IN EDMONTON.

FRIDAY, November 24, saw the celebration of an event of national importance, for on that day the first C.N.R. train arrived in Edmonton from Winnipeg, having made the trip in 27 hours. On the afternoon of the same day, with ceremonies and speech-making befitting an occasion so important, the "last spike" was driven by Lieut.-Gov. Bulyea and the road was formally declared open for traffic.

The occasion was an epoch-making one in the history of Canada, for it marked an important stage in the building of a transcontinental road about which the majority of the Canadian people have heard very little. All Canada was in an uproar when the Canadian Pacific was built, and considering the importance of the undertaking and how little was then known of the possibilities of the country it was only natural that the project should command the attention of the entire country. The building of the G.T.P. has also been heralded by the beating of drums and the blowing of political trumpets, and the country has been in a ferment of discussion and political strife because of it. All Canada has known of the project and has appreciated its importance. The G.T.P. has often been referred to as the second of the Canadian transcontinentals, but this, of course, is a mistake. Since 1895 the Canadian Northern interests have been working steadily at the building of the second transcontinental and although their work has attracted very little attention and aroused very little interest in Eastern Canada they have nevertheless been accomplishing great things in a quiet and unostentatious way. A little more than a year ago the good people of Toronto sat up and rubbed their eyes in astonishment when they read in their papers one morning that the C.N.R. management had secured an option on the proposed new union station site about which the Canadian Pacific and Grand Trunk were disputing. It was a bold stroke that advertised effectively the fact that another transcontinental was being built.

It may surprise many people to know that the C.N.R. have now almost 2,500 miles of track west of Lake Superior. Nine years ago they had only 100 miles in the Dauphin district of Manitoba, but the work has been carried on steadily and systematically in the intervening years. So well has the work been planned that every section of the road has been made self-supporting as soon as it has been turned over to the operating department. The accomplishment of this object has been steadily kept in view by Mackenzie & Mann when deciding on new extensions.

The completion of the road to Edmonton marks an epoch in the history of Western Canada and means a great deal for that city. The distance from Winnipeg and the east has been shortened by several hundred miles and the future of Alberta's capital as a jobbing centre seems to be assured.

WORK, NOT CHARITY.

PAUPERISM in England is one of the most absorbing questions before the world to-day. There is an apparent reason for the revolutionary movement in Russia, but few Canadians can understand why "there are ten million people in Great Britain on the verge of starvation," as a leading British statesman put it a year ago, and how things can be so bad in London, the wealthiest city in the world, as to have a procession of 6,000 poorly dressed and half starved women, many of them carrying babies, march through the streets of the metropolis singing the "Marseillaise," and sending a deputation to Premier Balfour asking that public works be started to provide employment for their husbands, brothers and fathers.

But hard though it may be to realize that wealth and poverty are twin sisters, such is the fact, and the deplorable conditions existing in London have moved Queen Alexandra to donate $10,000 to start a charitable fund to relieve the distress, Premier Balfour having stated that "he had little to suggest in the way of alleviation except an expression of hope that public charity would come to the aid of the unemployed. He deprecated the Socialistic suggestion that industries should be started at the national expense for the benefit of the unemployed as calculated to destroy the springs of enterprise and energy of the nation." And a recent cable says the poor are flocking to the metropolis in droves, being attracted by the Queen's fund to assist the unemployed. This influx simply aggravates the situation, as the impoverished are invading London more rapidly than they can be provided for.

There seems to be no longer room to doubt that the condition of the poorer classes in England in continually growing worse. The reports of the medical examiners of recruits for the army showed such evidence of physical degeneracy as to cause general alarm, which was only partially allayed by the investigation of a Parliamentary commission, which found the conditions exaggerated, although serious enough to demand attention. The commission reported that one of the chief causes of physical deterioration is that many of the children do not get enough to eat. The latest statistics show that there is now more pauperism in England than at any time since 1873, and that it has increased rapidly in the last few years. The total now recorded is 768,390, or 22.8 per 1,000 of the population. The increase over last year is 30,756, and it is higher by 63,782 than it was ten years ago.

What is to be done to relieve this situation? Can the English race be allowed to starve and deteriorate in its home land and in the midst of plenty? Can the problem be left for solution by the leisure classes in England and for alleviation by Queen's funds and other charitable enterprises? As well may we do as an Irish domestic is said to have done—endeavor to mop up the water on the kitchen floor without turning the water tap off. A wealthy business man, one who had risen from the ranks, recently pointed out that it was the policy of the families in England having hereditary incomes or drawing large pensions to encourage pauperism, as it meant to them cheap labor and products of labor (food, clothing, etc.,) a plentiful supply of cheap servants, and a servile common people. Little, therefore, can be expected from this quarter. Whatever practical measures are adopted must be suggested and put into action by business men who recognize the waste to society in keeping in existence an idle poor as well as an idle rich class. The incapacity of the offspring of idle parents will appeal to all thinking men who desire to see the world's undeveloped resources exploited.

"Work, not charity," were the words emblazoned upon the banners of the orderly out-of-works who paraded the streets of London recently. Men and women denied the opportunity to earn bread for themselves and their children asked that the opportunity to labor be given them. But the English tax-payer dearly loves low tax "rates"—even though it means workhouses and charity. The Canadian business man sees things differently. He sees "millions of acres wanting hands" in Canada, and "millions of hands wanting acres" in old England, and he makes the connection. Farmers in Canada are crying out for assistance, and while it is no easy matter to make a Canadian farmer of a British city dweller, three or four years spent on the farm will give sufficient knowledge to enable the former pauper to take up land and farm his own ground. This is a subject in which the retail trade is vitally interested, as the more Englishmen put on Canadian farms the more customers will the merchants of Canada have to serve. The average farmer's family spends about $1,000 per year, and money spent in bringing and training a lot of families of this sort would soon pay for itself. The work should be directly supervised by Government agents, however, as employment agents in Great Britain are doing much to give Canada an unenviable reputation in the Mother Country. Much money is already being spent in encouraging emigration to add to our city population, but the need of the country districts is of much greater importance.

When we take into consideration the fact that the level land of Japan is less than 3,000 square miles and that this same level area supports over 45 millions of people, we can form some idea of what a mighty empire it is possible for Canada to become. All that is needed is willing workers who despise charity and use push, perseverance, and patience.

QUESTION OF QUANTITY BUYING.

"SHOULD not one combination be allowed to get a given quantity of goods as cheaply as another combination of men?"

These words uttered by Mr. Fielding, sitting on the Tariff Commission at Hamilton, are really pregnant with meaning and strike at the root of the whole question. It is always well to bear in mind there are two sides to every question.

As an illustration of the importance to a manufacturer of regulating the selling price and terms on goods of his manufacture, an instance is known of a manufacturer a short time ago having sold a block of goods to a departmental store, the argument advanced by the buyer of the departmental store being that in view of the quantity purchased they expected the very lowest price. The manufacturer sold at his lowest price and shortly after that the departmental store was advertising the line of goods in question at less than the manufacturer's wholesale price.

The result was, that when afterwards the manufacturer called upon the wholesale and retail trade with a view to securing business, he was met with the answer that it was no use him expecting to make sales to the wholesale and retail trade at the prices he was asking when the departmental store in question was offering the goods at less than the manufacturer's price. This line of goods was used as an advertising medium to attract buyers by the cheapness of a staple article upon which every householder knew the price, while, at the same time the departmental store could probably secure other business from an intending buyer that would net him a

very large profit, completely ruining the retailer's trade for the season.

There are many cases of this kind, and unless proper protection and regard were given by the manufacturers to the different classes of trade, the sale of goods to the consumers would soon be entirely in the hands of three or four departmental stores or their branches throughout the country. So many lines of groceries being staple, and the prices being well known to consumers, departmental stores frequently use such lines for advertising purposes, with the result that their action is calculated to ruin the trade of the retail grocer, unless he is properly protected by the manufacturer and wholesaler.

FIGHT FIRE WITH FIRE.

WHEN you find mail order advertising circulating in your territory which actually misrepresents, go after it.

You cannot do this by talking in the store. While you are discussing such misrepresentation with a few people many more are taking the bait and sending their money away.

There is an old saying that you must fight the devil with fire. You must fight retail mail order advertising with advertising just as positive and even more convincing.

An exchange tells of a North Dakota retailer who has found it necessary to begin a campaign of education against retail catalogue houses. He uses both prices and general argument. He analyzes the weakness of the offers made by retail mail order houses, compares their goods with his goods and their values with his values. One of his recent circulars, printed on a mimeograph, is an argument which no farmer can dodge. He must confess that the local merchant has proven his case.

Even with such work as this there are people who will persist in sending their money out of the country, but do not weep too long over them. Every community has them. Do the best you can. Hold as big a percentage of the trade at home as possible and bear in mind that the man does not live who can hold it all.

Time spent in trimming a window is never wasted—if the trim is any good at all. Therefore do not think that when the clerk is fixing up a display that his time is being poorly spent. If he has any ability he is earning money for you—more, maybe, than when he is behind the counter.

SUCCESSFUL JOBBERS AND SALESMEN.

No. 8

UNDOUBTEDLY this series of "Successful Jobbers and Salesmen" would be sadly incomplete if western jobbers and salesmen were not represented. The west is now offering, in many lines, the largest opportunities for Canadian business houses, and it is to the west that Canadian manufacturing and jobbing houses must look for future expansion. Hence it is that the western field is commanding the attention of some of the brightest and shrewdest of Canadian salesmen.

In this issue Hardware and Metal takes pleasure in presenting its readers with a portrait of Mr. C. D. Waldon,

Mr. C. D. Waldon,
Sales Manager Pease-Waldon Co., Winnipeg, Man.

sales manager of the Pease-Waldon Co., Limited, of Winnipeg. It is a portrait that will be recognized by many readers in the east as well as in the west, for Mr. Waldon's business experience has brought him in touch with the trade in many parts of Canada.

Mr. Waldon has had considerable experience in the heating business, having made his first trip at the age of nineteen for Clare Bros. & Co., of Preston, Ont. For the last few years, prior to his coming to Winnipeg, he was traveling salesman for the Pease Foundry Co., of Toronto. During his years on the road he has made a host of friends for himself among the Canadian heating trade, and he has established an enviable record as a successful salesman and popular traveler.

About one year ago the Pease-Waldon Co., Limited, of Winnipeg, of which J. T. Sheridan and W. J. Jones, both of the Pease Foundry Co., Toronto, are president and vice-president, respectively, was organized as a separately incorporated company to conduct the rapidly growing western business of the Pease Foundry Co. Mr. Waldon acquired a financial interest in the company and was made sales manager.

Quite recently the Pease-Waldon Co. have moved into spacious showrooms and offices on Portage avenue. Their new premises are in the centre of the best retail section of Winnipeg, and they are the admiration of the heating trade.

OF INTEREST TO HARDWAREMEN.

Now is the time to order goods for early Spring delivery. Wire cloth, poultry netting and kindred lines should be booked well ahead if prompt delivery of goods is wanted.

* * *

Every hardware merchant should be a preacher of the gospel of good roads. Supply good roads and the farmers will not be nearly so much inclined to send mail orders to the concerns in the city. Given roads with mud axle deep and do you wonder that the catalogue houses get trade? Good roads will advance not only the hardware trade, but all others, and at the same time improve the value of land. It is a matter that every hardware merchant should take up and actively push.

* * *

Now is the time for hardware merchants to advertise Christmas presents. What would be better for a boy with a mechanical turn of mind than a tool set or a scroll saw? For exercise and amusement what is better than a bicycle, boys' wagon or a velocipede? There is nothing that will please the housewife better than a sewing machine, tea set, set of knives and forks or a nice clock. For the older boys and men what will be more appreciated than a good shotgun, safety razor or pocket knife?

* * *

The hardware business has plenty of opportunity and will continue to have for the merchant who uses the right methods. There is no doubt that the catalogue houses have made it harder for the local merchant to do business, but when you come right down to it, that is like any other competition, must be met with new and better methods. Associations are doing much to protect the interests of the retail hardwareman at the buying end. When it comes to the selling the problem is up to the individual merchant.

PERSONAL MENTION

Ontario.

J. D. Sheridan, plumber, Woodstock, was a visitor in Toronto this week.

T. Norris, of Norris & Lockhart, plumbers, Galt, spent last Saturday in Toronto.

Mr. J. T. McCall, of Drummond & McCall, metal merchants, Montreal, was a visitor in Toronto on Thursday.

L. A. De LaPlante's new hardware store at East Toronto is nearly completed, and will open for business shortly.

Mr. A. C. Adam, assistant manager of the Canadian Iron Furnace Co., Midland, spent a few days in Toronto this week.

The Brantford Screw Works intend to build an extension to their factory at Brantford, according to a dispatch from that city.

The Toronto Bolt & Forging Co. are suing the Le Page Door Check Mfg. Co. for $373. The Le Page Co. has put in a contra claim for $700 damages.

Charles Bogardus, of Morristown, has sold out his hardware business, the change to take place at once. Mr. Bogardus has accepted a position as traveler for a hardware wholesale house.

C. L. Race, Port Hope, has sold his hardware business to Wm. McGibbon, of Brighton. Mr. Race leaves on Dec. 15 for Edmonton, where he has accepted a position with a wholesale hardware house.

Roberts & Hetherington, painters and decorators, Toronto, intend opening a branch store at Peterborough. Both are former residents of Peterborough, and should make a success in business in that town.

John McIntyre, of Eganville, has opened a new hardware store in the fine brick block of Robt. Reeves, in that town. As Mr. McIntyre is an experienced hardwareman, his prospects of success are of the brightest.

A new firm for the manufacture of wire fence has recently started in Woodstock, known as the Standard Wire Fence Co., in the building formerly used as an automobile works. A new machine has been installed capable of manufacturing 800 rods per day of fencing.

Mr. Joy, manager of the Joy Mfg. Co., makers of steel ranges, Toronto Junction, was a caller on Hardware and Metal this week. Mr. Joy was formerly president of the Retail Hardware Dealers' Association in North Dakota, and will probably be heard from in the discussion of the competition to organize a similar association in Ontario.

Quebec.

Mr. Hope, of Kynochs, Limited, England, is visiting some Montreal friends.

Ed. Bonneterre, tinsmith, plumber, etc., of Laprairie, visited Montreal during the week.

L. P. Beaulne, hardware merchant, of Hawkesbury, Ont., visited Montreal a few days ago.

J. E. Scale, general merchant, of Morin Flats, paid a visit to Montreal last Wednesday.

E. Chevalier, plumber, of Joliette, was an out-of-town purchaser in Montreal a few days ago.

W. H. Evans, of the Canada Paint Co., Montreal, spent part of the week at St. John, N.B.

D. Racine, general merchant, of Casselman, Ont., called on some of the Montreal jobbers recently.

Mr. Bissonette, of Bissonette et Freres, St. Sebastien, visited the Royal City during the week.

I. England, of Israel England & Sons, general merchants, Knowlton, was in Montreal this week.

Mr. Akin, of Akin & House, general merchants, Beebe Plain, was in Montreal on business a few days ago.

P. J. Powers, of Powers & Co., boiler manufacturers, Ottawa, paid a business visit to Montreal a few days ago.

Louis Beaulieu, manager of the Pontbriand Co., Sorel, was in Montreal this week placing orders for supplies.

Mr. McCarty, of J. C. McCarty & Co., manufacturers' agents, New York, called on the Montreal trade this week.

Gordon Baxter, manager of the Maritime Engineering Co., Moncton, N.B., was in Montreal during the present week.

John Shaw, general merchant, of Shawville, Que., has sold out his dry goods and boot and shoe departments with the intention of handling only hardware and groceries in the future.

Caverhill, Learmont & Co., Montreal, are extending the telephone system in their main warehouse on St. Peter street. Their number henceforth will be Main 5350.

The Traders' Co., of Buckingham, Que., are making a fine record for themselves as expert window dressers. Their latest display is a most attractive window of cross-cut saws and Winter goods.

The Coulonge Hardware Co. have just completed a fine new store at Fort Coulonge, Que., to replace the building which was burned last March. The new structure is of brick and contains two storeys.

A. J. Vallerand, who represents Frothingham & Workman, Limited, in Southeastern Quebec, has been under the weather for a couple of weeks and has been unable to get out on his ground during that time.

In the forthcoming elections in Westmount, it is expected that Jas. R. Walker, of Jas. R. Walker & Co., dealers in junk and paper stock, Montreal, and formerly mayor of Westmount, will be a candidate in Ward No. 2.

G. G. Grundy, purchasing agent of the Temiscouata Railway, Riviere du Loup, was in Montreal this week. The Temiscouata Railway runs from Riviere du Loup to Edmunston, N.B., forming a connecting link between the I.C.R. and C.P.R.

Hardware and Metal is in receipt of a neat little booklet entitled "Concerning Ourselves," published by Herbert Rodgers & Co., Saracen House, Snow Hill, London, Eng. As manufacturers' agents, this firm act as direct representatives in the United Kingdom of manufacturers of hardware and allied lines.

Great interest is being manifested among the Quebec trade in the technical books of the MacLean Publishing Co. Many orders are being received, and especial mention may be made of the reception which is being given "The American Hardware Store." Its hints are invaluable to the up-to-date retailer. All inquiries addressed to the Montreal office (232 McGill street) will receive prompt attention.

Western Canada.

S. Johnson, late of the Brandon, Man., Hardware Co., has accepted a position in J. R. Meldrum's hardware and furniture store at Capar, Man.

Smith & Ferguson, Regina, have completed the erection of a large warehouse costing $5,000. It contains four floors, three of which will be used for heavy hardware, and the fourth for light goods. The company intend to branch out into the wholesale business next Spring.

DEATH OF FRED W. MORSE.

News was received in Toronto on Thursday of the sudden death in Winnipeg on Wednesday of Mr. Fred W. Morse, vice-president of the Miller-Morse Hardware Co., and one of Winnipeg's best known business men. Mr. Morse died very suddenly of heart failure, having just telephoned down to the office that he would not go down to business until the afternoon and having returned to bed just before being stricken. Mr. Morse was apparently in the best of health and his death was a great shock to Mrs. Morse as well as to all of his many friends and acquaintances in the hardware trade.

Mr. Morse learned the hardware business under the late Henry Rutledge, buyer and manager of Samuel Benajmin & Co., and in 1882, while still a young man of about twenty-five, he removed to Winnipeg and assisted in founding the great hardware firm of which he was a member, the business being first established as a retail concern and later developing its wholesale character.

Speaking of Mr. Morse's death, Mr. Thomas Dexter, manager of H. S. Howland, Sons & Co., Toronto, feelingly referred to his friendship with Mr. Morse in days gone by, saying that Mr. Morse was the character of a man who made friends with everyone with whom he came in contact, always having a smile and a word of cheer for friends or customers. His old friends in Toronto were proud of his success in the west and have learned with regret the sad news of his death, occurring as it did in the prime of his life.

MARKETS AND MARKET NOTES

(For detailed prices see Current Market Quotations, page 74.)

THE WEEK'S MARKETS IN BRIEF.

MONTREAL.

Cotton Rope is being quoted at 22½c.
Linseed Oil has advanced 1c.
Turpentine declined 2c.
Ingot Copper is now 19¾c. to 20c.
Ingot Tin has advanced to 37c. and 37½c.
Pig Lead is now quoted $4.30 to $4.35.
Londonderry Pig Iron is up to $20.00 to $20.50.
Scrap Lead and **Scrap Copper** have advanced.
Solder has advanced 1c.

TORONTO.

Solder—Prices have been advanced 1c.

Turpentine—Quotations are from 2c. to 5c. lower.

Rosins have experienced a slump in southern markets.

Pig Iron—A general advance of from $1 to $1.50 has been made.

Ingot Copper—Prices have advanced $1 and $18.75 is now quoted.

Pig Lead—A 10c. advance has been made.

WINNIPEG.

Cold Blast Lanterns have advanced 50c. per dozen.

Pig Lead has advanced 25c. per cwt.

Petroleum has advanced ½c. per gallon.

Quebec Hardware Markets.

Office of HARDWARE AND METAL,
232 McGill Street,
Montreal, December 1, 1905.

TRADE is rather quieter this week than it has been for some time past, though a fair movement of seasonable goods is still going on. Weather conditions during the week have been discouraging to trade and all the local jobbers are looking forward to genuine Winter weather to boom things.

There are few price changes of any moment, the most important being in cotton rope, which is now quoted at 22 1-2c.

Sales in shovels, sleigh bells, and skates are satisfactorily large, while carvers and other lines of silverware are going out well.

Axes—The opening of the lumbering season is creating a good demand. Our quotations are as follows: Chopping axes, unhandled, $6 to $9.50 a dozen; double bitt axes, $9.50 to $12 a dozen; handled axes, $7.50 to $9.50; Canadian pattern axes, $7.50 a dozen.

Handles—Large sorting orders are being received from all parts of the country. Our prices are: No. 3, $1.25; No. 2, $1.50; No. 1, $1.90 a dozen; adze handles, 34 inch, $2.20 a dozen; pick handles, No. 2, $1.70; No. 3, $1.50 a dozen.

Sewing Machines—The Christmas trade is in full swing. Prices remain steady and are as follows: Hand sewing machines, $11 each, net; complete machines, with stand, $18.00 and up, according to quality.

Lanterns—Our quotations remain unchanged. We quote the following prices: Cold blast, $4.50; No. 0, Safety, $5.00.

Rivets and Burrs—Business is as usual in this staple line. We quote as follows: Best iron rivets, section, carriage and wagon box, black rivets, tinned do., copper rivets and tin swede rivets, 60, 10 and 10 per cent.; swede iron burrs are quoted at 60 and 10 and 10 per cent. off new lists; copper rivets with the usual proportion of burrs, 40 per cent. off; and coppered iron rivets and burrs in 5-lb. carton boxes at 60 and 10 and 10 per cent.; copper burrs alone, 30 and 10 per cent., subject to usual charge for half-pound boxes.

Screws—We still give the following prices. Round head, bright, 82 1-2 per cent.; flat head, bright, 87 1-2 per cent., brass, round head, 75 per cent.; brass, flat head, 80 per cent.

Bolts and Nuts—The turnover is large and the trade in every way satisfactory. Our prices are: 3-8 and smaller, 60 to 10; 7-16 and larger 55 to 5.

Horse Nails—Dealers are selling great quantities. Prices remain as follows: C brand, 40, 10 and 7 1-2 per cent.; M.R.M. Co., 55 per cent.; P.B. brand, 55 per cent

Wire Nails—Our prices are from $2.10 to $2.20 per keg, f.o.b., Montreal.

Cut Nails—Few orders are being received at the present time, but prices remain at $2.20 per keg, f.o.b., Montreal.

Horse Shoes—The demand for these goods is keeping up and frequent shipments are being made in all directions. We quote: P.B. New Pattern, base price, $3.50 per 100 lbs., M.R.M Co. latest improved pattern iron shoes, light and medium pattern No. 2 and larger, $3.65; No. 1 and smaller, $3.90; snow pattern, No. 2 and larger, $3.90, No. 1 and smaller $4.15. Light steel shoes, No. 2 and larger, $4, No. 1 and smaller, $4.25; featherweight, all sizes, No. 0 to 4, $5.60. Toeweight, all sizes, No. 1 to 4, $6.85. Packing, up to three sizes in a keg, 10c. per 100 pounds. More than three sizes, 25c.

Sporting Goods—Rifles and ammunition are selling in good volume. Our prices are: Canadian made shells, black, 25 and 5 per cent.; smokeless, 25, 10 and 5 per cent.. American centre-fire cartridges, list net; sporting and military, 10 per cent. advance on list; primers, $2.05 per thousand; American loaded shells, 20 per cent. discount; B.B. caps, $2.00 per thousand; standard shot, $6.50 per hundred pounds; chilled, $7.00 per hundred pounds; buck and steel, $7.50 per hundred pounds; ball, $8.00 per hundred pounds. We quote discounts 10 per cent. on shot, f.o.b., Montreal, Toronto, Hamilton, London, St. John and Halifax.

Building Paper—Conditions are about the same as was reported. The season's building operations are rapidly drawing to a close, so that the demand for building paper is abating. Prices are unchanged.

Cement and Firebrick—Trade in cement is slack, except for small jobbing orders. Firebrick, on the other hand, is in splendid demand, orders being both large and frequent. We quote prices: $1.80 to $1.90; Belgium, $1.60 to $1.90 per barrel; ex-store, American, $2.00 to $2.10 ex-cars; Canadian Portland, $2.00 to $2.05. Firebrick, English and Scotch, $17.00 to $21.00; American, $30 to $35; White Bros.' Eng. cement, $1.80 in bags, $2.05 in barrels in round lots.

Coil Chain—This line is in brisk demand, owing to the logging season being at hand. Good sized orders are being sent into the lumbering districts. We quote: 5-16 inch, $4.25; 3-8 inch, $3.75; 7-16 inch, $3.55; 1-2 inch, $3.35; 9-16 inch, $3.30; 5-8 inch, $3.20; 3-4 inch, $3.05; 7-8 inch, $3.00; 1 inch, $2.95.

Skates— There are very few orders coming in, which do not require skates. Sales are very large. Prices are from 25c. to $2.50, according to quality.

Sleigh Bells—This is one of the best selling lines on the market at the present time. Our prices are: Back straps, 30c. to $2.50; body straps, 70c. to $3.50; York Eye bells, common, 70c. to $1.50, pear shape, $1.15 to $2.00; shaft gongs, 20c. to $2.50; Grelots, 35c. to $2.00; team bells, $1.80 to $5.50; saddle gongs, $1.10 to $2.60.

Horse Blankets—Our prices are: Jute, unlined, $4.50; 3-4 lined, $9.50; full lined, $12; 16-oz. Hessian, unlined, $6.50; 3-4 lined, $11.50; full lined, $14, and up to $24; Kersey blankets, $9 to $21; all wool, $24, $30, $48 and $60.

Snowshoes— Local jobbers report an unprecedented demand for snowshoes, with the result that stocks are very scarce and some sizes cannot even now be obtained. We quote from $15 to $35 per dozen pairs, according to quality.

The Cleveland-Sarnia Saw Mills Company has adopted a unique method to keep its plant running all Winter. A portion of Sarnia Bay has been enclosed with sheet piling, and the water will be kept above freezing temperature with steam all Winter, for storage of logs.

Ontario Hardware Markets.

Office of HARDWARE AND METAL,
10 Front street east,
Toronto, December 1, 1905.

BOAT navigation has been discontinued and trade will fall off slightly. Sorting orders for the Christmas trade are still being received, however, and business is better than at this time a year ago. Silverware and cutlery continue to be in strong demand, while shooting materials are holding their own. Skates and sleigh bells are also being included in most orders.

The steadily increasing price of pig iron is having its effect on bolts, nuts and similar goods and prices are very stiff. No advance has yet been made, but as the price of raw material increases advances on the finished products become all the more certain.

Axes and Handles—Dealers are sorting for the winter trade and shipments are quite large.

Cutlery and Silverware—Business continues active and sorting orders are plentiful.

Sporting Goods—Shotguns and ammunition are still being called for.

Lawn Mowers—Orders are not being placed so much at present as a month ago, most Fall orders being booked.

Washing Machines—Trade is very active and dealers report increasing sales.

Chain—Cow chain is being included in most orders being placed. Our quotations are: 1-4 inch, $6.50; 5-6 inch, $4.45; 3-8 inch, $3.85; 7-16 inch, $3.70; 1-2 inch, $3.55; 9-16 inch, $3.45; 5-8 inch, $3.35; 3-4 inch, $3.25.

Extension and Step Ladders—Manufacturers are busy and prices firm. Our quotations are as follows: Step ladders at 10c. per foot for 3 to 6 feet, and 11c. per foot from 7 to 10 feet ladders. Waggoner extension ladders, 40 per cent. off.

Galvanized Wire—Prices are steady and business fair. We still quote: $2.42 1-2 f.o.b. Cleveland.

Barb and Coil Spring Wire—The average business for this season is being done.

Wire Nails—Prices are quite firm, some dealers quoting $2.10 and some $2.15.

Cut Nails—A very satisfactory volume of business is reported. Quotations are: $2.40 per keg f.o.b. Toronto.

Horse Nails—Blacksmiths' orders are very satisfactory and shipments are large.

Horseshoes—Trade continues brisk prices firm. We quote: P.B. base, $3.65; "M.R.M. Co., latest improved pattern" Iron shoes, light and medium pattern, No. 2 and larger, $3.80; No. 1 and smaller, $4.05; snow No. 2 and larger, $4.05; No. 1 and smaller, $4.30; light steel shoes. No. 2 and larger, $4.15; No. 1 and smaller, $4.40; featherweight, all sizes, 0 to 4, $5.75; toe weight, all sizes, 1 to 4, $7.00. If shipped from factory 15c. less.

Horse Blankets—Business in halters, girths, horse blankets and similar goods is active.

Skates and Sleigh Bells—Sleigh bells and skates are in active demand.

Screws—The market is very firm with prices unchanged.

Rivets and Burrs—Trade is active with prices very firm.

Bolts and Nuts—Quotations are very strong and business lively.

Cordage—Sorting orders are plentiful. We still quote: Manila, 15c.; British manila, 11 1-2c.; sisal, 10 1-2c.; double lathyarn, 10 1-2c.; single lathyarn, 10c.; sashcord, "Hercules," 30c. to 32c.; "Star," 36c.; cotton twine, 3-ply, 24c.; 4-ply, 29c.; calking cotton, 16 1-2 to 17c.; cotton waste, colored, 6 3-4c.; white, 9c.

Cement—Prices are unchanged and trade is seasonable. Our prices are: For carload orders f.o.b. Toronto, Canadian Portland, $1.90 to $2.00; American Portland, $1.90 to $2.00. For small orders ex warehouse, Canadian Portland, $2.10, American Portland, $2.10.

Firebrick— Business is more active. Prices continue as before: English and Scotch firebrick, 27c. to 30c.; American low-grade, 22c. to 25c.; high-grade, 27 1-2c. to 37 1-2c.

Building Paper—Shipments are heavy and prices continue unchanged.

Hides—Local markets continue firm, and active, all arrivals being easily placed and no prospect of any accumulation of stocks. It is generally thought that the market must soon find a more stable basis. Winter arrivals do not generally show good quality and will not, therefore, be so readily placed. The U. S. markets are showing distinct weakening, although still on a parity with this market. Wool is slow and unprofitable, many would-be buyers holding off to see result of coming London reports. We quote:

Hides, inspected, steers, No. 1		0 12
" " " No. 2		0 11
" " cows, No. 1		0 11½
" " " No. 2		0 10½

Canadian Metal Markets.

QUEBEC.

Office of HARDWARE AND METAL,
232 McGill Street,
Montreal, December 1, 1905.

ADVANCES have again been made in almost wholesale fashion in the metal markets this week and no one can see the end of the present movement upward.

After a period of gradual advance in pig lead, dealers were surprised this week to receive notice of another sharp jump in price, ruling figures at time of writing being quite twenty cents per hundred pounds above those quoted at the same time last week. In explanation of this phenomenal situation, comes the simple statement that the demand greatly exceeds the supply.

Another surprise was furnished by the big rise in the price of copper, the remarkable strength being quite unexpected, in spite of the known firmness of the market. No attempt is made to explain logically the big jump, but the probability is that the upward tendency will be unchecked for some time with far-reaching results in all kinds of copper and brass products.

Not to be outdone in the stampede for higher prices, tin has also fallen into line, having advanced one cent and a half above previous figures and showing great strength at the revised price.

Pig iron is also a feature in the market, though there has been no such widespread readjustment of figures as has taken place in other metals. The very last arrivals of the season are now in and iron not contracted for has been taken from the docks and stored, which accounts for the higher prices this week. There are fairly heavy bookings, as everyone seems to be wanting iron, and consumers requiring special grades are being forced to pay high figures.

From the strength of all kinds of ingots and brass a general advance in sheets seems imminent.

Canada Plates—Tendency is decidedly upward. Our quotations for the present are as follows: 52's, $2.50; 60's, $2.55; 75's, $2.60; full polished, $3.60; galvanized 52's, $4.00; 60's. $4.25.

Copper—The advance in this metal has been the strongest feature of the week. Prices now current are 2 cents in advance of last week. We are quoting: Ingot copper, 19 3-4c. to 20c.

Ingot Tin—As forecasted last week, prices have been advanced, and are now from 37c. to 37 1-2c. per lb.

Pig Lead—A bigger jump than has occurred for some time has been made this week. We are now quoting from $4.30 to $4.35 per hundred lbs.

Boiler Tubes—We quote: British and American tubes, 1 1-2 inch, 8 1-2c.; 2 inch, 8 1-2c.; 2 1-2 inch, 10c.; 3 inch, 12c.; 3 1-2 inch, 15 1-2c.; 4 inch, 20c.; 5 inch, 45c. Price per foot net.

Pig Iron—Changes in price this week are accounted for by the fact that pig iron is now being sold only ex store. Special grades are at present commanding high prices and good all around orders are being booked. We quote.

"Dom.," No. 1, $19 50 to $20.00 delivered Montreal.
Usual difference in price for lower grades.

Ferrona No. 1	$19 50	delivered	Montreal.
" No. 2	19 00	"	"
" No. 3	18 50	"	"
" No. 4	18 00	"	"
Londonderry	20.00 to 20 50	"	"
Carron No. 1	22 50	"	"
" (special)	22 50	"	"
Summerlee No. 1	22 50	"	"
Clarence No. 1	19 50	"	"
" No. 3	19.00	"	"

Tool Steel—We are quoting: Colonial Black Diamond, 8c. to 9c.; Sanderson's, 8c. to 45c., according to grade; Jessop's, 13c.; Jonas & Colver's, 10c. to 20c.; "Air Haradening," 65c. per lb.; Conqueror, 7 1-2c.; Conqueror High Speed Steel, 60c.

Merchant Steel—Our last week's quotations are stationary. Prices are as follows: Sleigh shoes, $2.07 1-2; tire, $2.22 1-2; spring, $2.75; toecalk. $2.77 1-2; machinery iron finish, $2.17 1-2; reeled machinery steel, $2.75; mild. $2.07 1-2 and upwards; rivet, $2.07 1-2 and upwards. Net cash 30 days.

Cold Rolled Shafting—We quote: Cold rolled shafting, 3-4 inch to 7-16, $3.75 per 100 lbs.; inch and a half to 3 inch. $3.50 per 100 lbs.

Galvanized Iron—Importers have been compelled to face another advance on the part of the producers, and the feeling among the jobbing trade is distinctly "bullish." We quote: Queen's Head, 28 gauge, $4.10; 26 gauge, $3.85; 22 to 24 gauge, $3.60; 16 to 20 gauge, $3.35; Apollo, 28 gauge, $4; 26 gauge, $3.75; 22 to 24 gauge, $3.75; 16 to 20 gauge, $3.40; Fleur-de-Lis, 28 gauge, $3.85; 26 gauge, $3.60; 22 to 24 gauge, $3.35; 16 to 20 gauge, $3.10; Comet, 28 gauge, $3.85; 26 gauge, $3.60; 22 and 24 gauge, $3.35; 16 to 20 gauge, $3.10; Bell brand: 28 gauge, $4.20 to $4.25; Gorbal's "Best Best," 28 gauge, $4.10, "Windmill Best," 28 gauge, $3.95; Sword and Torch. 28 gauge, $4.05; in less than case lots 25c. extra.

Black Sheets—In common with all sheet metals, there is a brisk demand and prices will likely go up soon. We quote as follows: 28 gauge, $2.25; 26 gauge, $2.20: 22-24 gauge, $2.15; 19-20 gauge. $2.15: 8-10 gauge, $2.30.

Antimony—Conditions remain as before stated. We quote: 14c. to 14 1-2c. for Cookson's.

Tin Plates—The market continues very firm as ingot tin is still advancing. We quote: Cokes, $3.75; charcoal, $4.00.

Terne Plates—We still quote $6.75.

Ingot Zinc—Prices are still unchanged, but remain even firmer than before. We quote: 6 3-4c. to 7c.

Sheet Zinc— Although we make no change in our quotations, it is thought that they will be soon advanced. Our prices are: In casks, 7 3-4c.; sheet, 8c.

Bar Iron—We are still quoting: $1.97 1-2, f.o.b., Montreal.

Old Material—The week just past has been somewhat quiet, though there is more demand than before for scrap lead. High prices seem to have taken out stocks pretty well and they are now scarce. The price locally has advanced to 3c. The rubber market continues quiet, but stocks are very light and manufacturers are likely to be compelled to raise their prices above those now being quoted. Scrap copper, in sympathy with the advance in ingot, is now selling at rather higher prices. Wrought iron scrap is the same as formerly and prices on cast scrap are slowly advancing to keep pace with the advance in pig. We quote: Copper wire, 14 3-4c.; light copper, 13 3-4c.; heavy red brass, 11 1-2c.; yellow brass, 9 1-4c.; light brass, 6 1-2c.; lead, 3c.; zinc, 4c.; machinery cast scrap, $13; wrought scrap, $12; stove plate scrap, $10; mixed rags, 75c. to 90c. per 100 lbs. old rubbers, 7 1-4c. to 7 1-2c.

ONTARIO.

Office of HARDWARE AND METAL,
10 Front Street East,
Toronto, December. 1, 1905.

ADVANCES have been made on several metals during the week, pig iron being very active and the prices of Midland and Londonderry having advanced from $1.00 to $1.50. Pig lead has also been moved upward 10c. and it is now quoted at $4.35 per 100 pounds. Copper also shows another advance, the increase being $1.00 per hundred and the ruling price now being $18.75 per hundred lbs. for ingot copper.

Jobbers report a very large business being done, particularly in ingot metals, orders for forward delivery being also very satisfactory.

The strong position of pig iron is likely to be continued and keen students of market conditions predict further advances during the Winter. All the mills are very busy and some are booked ahead for fully a year. The demand is much greater than the consumption and there is every indication of the market strengthening in tone for some time to come.

Pig Iron—Prices have advanced again, the general advance of about $1.00 being caused by increased prices for coke and ores. We quote:

Middlesboro, f.o.b., Toronto	$22 50
Hamilton, No. 1, at furnace	19 50
" No. 2, "	19 00
Midland, No. 1, "	20 00
" No. 2, "	19 50
Radnor, at furnace	31 50
Londonderry, f.o.b. Toronto	21 50

Bar Iron—Business is very lively with manufacturers asking time to make shipments. We quote $2.00 base, f.o.b. Toronto, with discount of 2 per cent. net cash.

Tin Plates— Demand is active with prices very firm.

Galvanized Sheets—Prices are firm in the outside markets, the demand continuing active locally.

Brass— Conditions are unchanged, business being active. Discounts continue at 10 per cent.

Lead—Business is more active, with another advance of 10c. reported. We quote: Pig lead, $4.35 per 100 lbs., and bar lead, $4.80 per 100 lbs.

Zinc Spelter—The market continues active with prices unchanged. We quote: 7c. per lb. for foreign and 5 1-2 to 5 3-4c. per lb. for domestic.

Copper—A big jump has been made during the week, an advance of $1.00 on ingots being reported. We quote as follows: Ingot copper, $18.75 per 100 lbs., and sheet copper, $21.00 per 100 lbs.

Antimony—The demand is fair, with stocks in hand light.

Old Material—The high price for new metals is creating a better demand for old material and prices are strengthening. Dealers' buying prices as follows: Heavy copper and wire , 13c. per lb.; light copper, 12c. per lb.; heavy red brass, 11 1-2c. per lb.; heavy yellow brass, 9c. per lb.; light brass, 7 1-2c. per lb.; tea lead, $2.40 per 100 lbs.; heavy lead, $2.75 per 100 lbs.; scrap zinc, 4c. per lb.; iron, No. 1 wrought. $8 to $8.50, No. 2 wrought, $3 to $5; machinery cast scrap, $13; stove plate, $10; malleable and steel, $5; old rubbers, 7c. to 7 1-4c. per lb.; country mixed rags, 75c. per 100 lbs.

Coal—No change is reported, prices being steady. We quote: Anthracite in cars at bridges, grate, $5.25 per gross ton; egg, stove and nut, $5.50 per gross ton; pea, $3.90 per gross ton.

Standard Hocking, soft coal, in cars, f.o.b. at mines: Lump, $1.35; 3-4 inch, $1.25; run of mine, $1.05; nut, 90c.; N.P. and S., 60c.; slack, 40c.; box cars 10 cents per ton additional.

Youghiogheny soft coal in cars, bonded at the bridges: 1 1-4 inch, $2.45; 3-4 inch, $2.35; mine run, $2.35; slack, $1.80 to $1.90.

For Manitoba, British Columbia and Maritime Provinces markets see pages following.

UNITED STATES METAL MARKETS

Advance proofs furnished HARDWARE AND METAL by The Iron Age, November 30, 1905.

SO far as pig iron is concerned the markets have quieted down, but maintain their full strength. There have been few large transactions in foundry grades, but some pretty good inquiries are still in the market.

The scarcity of metal for steel making purposes continues. Last week the leading interest purchased 25,000 tons of basic pig in the eastern markets for delivery to the Pencoyd Works. This iron takes the place of metal which it was the original plan to ship from the Pittsburg district, but which has now been diverted to the steel plants there, where it was sorely needed.

For the first time in many months there has been a softening in the price of coke, which is due to the fact that makers have rushed every available unit of plant into commission and that there has been a better supply of cars.

Merchant firms in the lake ore trade have been filling up their order books for deliveries of ore during the next season. The movement, which began some time since with the booking by one large firm at an advance of 25c per ton over last year, has now spread and buyers and sellers have met on the basis of an advance of 50c per ton, which makes the basis for Bessemer Old Range $4.25 for the next season. The ore men have acted with very much more conservatism than the coke producers.

There has been a little relief in the congestion of the plate mills. A good deal of new work is coming up for the structural mills in Chicago, Pittsburg

and other cities. Thus far the threatened strike of the housesmiths in New York has not affected the rolling mill programmes.

The principal hoop mills have decreed a further advance of $2 per ton, which puts the price up to 1.85c., Pittsburg. Bars are stiffer and higher prices are being asked.

The international markets have been gaining in strength. The United States Steel Corporation, not having any open space for export orders before August of next year, has just authorized the booking of orders for the last half. Since the interest in question has been holding back for a month, resisting the demands of buyers, it is likely that a considerable tonnage will be booked at an early date.

An international incident has been the capture by the Steel Corporation of a round lot of girder rails for London tramways. Yet another English order has been recently awarded to British makers, in spite of the fact that the American bid was $8 per ton below that of the local mills.

In the domestic rail markets the principal transaction has been the sale of 25,000 tons additional to the Gould lines and 18,000 tons to the Lehigh Valley.

LONDON METAL MARKETS.

From Metal Market Report, November 29, 1905.

Pig Iron— Cleveland warrants are quoted at 52s. 7 1-2d, and Glasgow Standard warrants at 51s. 7d, making prices as compared with last week 6 1-2d. lower for Cleveland warrants and 5s. lower for Standard warrants.

Tin— Spot tin opened strong at £156 5s., futures at £156, and after sales of 300 tons of spot and 400 tons of futures closed easy at £156 2s. 6d for spot and £155 12s. 6d for futures, making prices as compared with last week £2 15s. higher on spot and £3 5s. higher on futures.

Copper—Spot copper opened easy at £77 5s., futures £76 15s., and after sales of 200 tons of spot and 600 tons of futures closed firm at £77 15s. for spot and £77 5s. for futures, making prices as compared with last week £2 2s. 6d higher on spot and £2 13s. 6d higher on futures.

Lead—The market closed at £16, making price as compared with last week 11s. 3d higher.

Spelter—The market closed at $28 12s 6d, making price as compared with last week 2s. 6d higher.

MINES AND METALS.

There was a large attendance at the meeting held at the King Edward Hotel, Toronto, November 27, to prepare resolutions for presentation at the Provincial Mining Convention to be held in Toronto on the 12th of December.

A report from the Assistant Commissioner at White Horse states that a rich vein of gold ore a mile and a half long has been struck in the Montana mines. It is said this is worth $12,000,000.

English capital stands ready to purchase the Lenora and Mount Sicker mining properties and all assets, and if the private sale planned to take place in Victoria on Wednesday, November 23, is interfered with the legal representatives of the assignees of mortgages on the properties fear the deal may fall through. The price to be paid for the property is $100,000.

Lawrence Godkin, of New York, has been appointed receiver of the Colonial Copper Co., which owns mines in Nova Scotia and other portions of Canada. A petition of bankruptcy has been filed against the company amounting to $6,550. Mismanagement on the part of the company's officers was alleged. This company is capitalized at $5,000,000 and an authorized bonded indebtedness of $300,000, of which $115,000 has been issued.

The Wellington Colliery Company, Cumberland, B.C., are making extensive improvements to their new anthracite mine at Hamilton Lake.

A seam of coal 5 feet thick and about 30 feet from the surface has been struck at Turtle Mountain. The quality is said to appear superior to the ordinary Souris coal, and tests are to be made at other points.

Messrs. B. E. Pearson and J. Johnson, of Halifax, who have taken up a large field of coal areas adjoining the territory which is now being developed by the Standard Railway & Coal Co., have succeeded in interesting a number of wealthy capitalists from Pennsylvania in the property held by them, and it is their intention to make borings and to otherwise prospect their areas in the view of opening up mines in that section of the country.

A deal has taken place by which the Bugaboo iron mines in the Alberni district, Vancouver Island, have become the property of Seattle people. It is expected that development will be commenced at once on a large scale.

Survey parties are prospecting at the head waters of the Skeena River, B.C., and it is reported that coal has been found in large quantities in this district. Seams are found running in all directions, cropping out from the ground in many places.

The Cape Breton Coal & Iron Co. are doing considerable development work and contemplate opening large areas of coal beds near Cochrane's Lake, on Cape Breton Island.

WORLD'S PRODUCTION OF PIG LEAD.

World's production of pig lead as compiled by Mr. Matton, of London, in tons of 2,240 lbs., is as follows :

	1903.	1904.
United States	266,691	298,820
Spain	172,521	183,014
Germany	141,558	133,498
Australia	93,500	117,105
Mexico	95,000	100,000
England	30,958	24,438
Italy	21,405	23,422
France	22,965	18,006
Belgium	20,015	23,469
Greece	13,075	11,0[illegible]
Austria-Hungary	14,008	14,428
Turkey	7,493	10,588
Canada	8,121	13,600
Japan	4,000	4,000
Sweden	661	576
Russia	300	300
South America	150	280
Africa and East India..	179	60
Total	912,600	981,100

New Brunswick Trade News

St. John, Nov. 25, 1905.

OUTLOOK for the hardware business here at present is satisfactory. The Fall season, generally speaking, has been one of good trade for the hardware people and with the Christmas business beginning there is little reason for dissatisfaction.

Lumbermen, of course have been complaining of the poor business consequent upon the lowness of the water in the St. John River during the Summer and Fall and it is possible that the Christmaas and the general Winter trade in hardware and other lines will suffer as a result. Moreover, if the present difficulty between the longshoremen and the steamship companies here is not settled soon business is sure to suffer to a greater or less extent. But, in spite of these facts, the present outlook is not discouraging.

* * *

As a reference has been made to the lumbering industry it may not be amiss to speak of the unusual demand for saws among lumbermen this year. Comment upon this demand has been made in several provincial papers. Where axes were used almost entirely in felling trees in the province in former years, saws are now coming into use. Consequently, the sale of saws to lumbermen is increasing. There is, of course, a corresponding decrease in the axe sale. Edge tool manufacturers here, however, are kept busy and the several firms are reported to be doing good business. They are understood to be meeting with a considerable measure of success in their efforts to push their goods in other parts of the Dominion.

* * *

The transfer of the control of the Maritime Nail Works to the Copewell Horseshoe Nail Co., Hartford, Conn., is still being talked about. The plans of the reorganized company are not made public, but it is not thought that any startling changes are contemplated. The staff of the works has not been changed to any extent, though Mr. Fred Elkin has resigned, and, it is said, will be succeeded by Mr. Stanley Elkin. Increased activity in efforts to enlarge the business done by the concern in the eastern provinces is sure, however, to follow this assumption of control by the reorganized concern.

All metals are showing a very firm tone in price just now. Several have advanced somewhat of late and it will not be wholly unexpected if other advances are recorded ere long. Shelf goods are also showing an upward tendency.

The business done in ammunition during this Fall was perhaps somewhat in advance of that of other years. Certainly, it was up to the average of former seasons. Prices were good and in

every way the trade was satisfactory Now, of course, the demand is dropping off, though there are still some sales recorded.

This is the time when stove dealers are rushed with the calls of anxious householders desirous of having all in readiness when the Winter cold sets in. For some of the dealers this is proving even busier than other similar seasons. Some good stove sales have been made and it is interesting to note that province made stoves are the variety that are sold here almost entirely. The growth of the stove making industry in New Brunswick goes to show that provincial manufacturers can compete successfully with those of other places, something that has been shown in several instances before.

British Columbia Trade News

BRITISH COLUMBIA wholesalers have received word from Montreal that their efforts have been successful in securing a satisfactory arrangement with the railroads that goods will not be shipped to the coast, as threatened, in mixed carloads.

This is a matter which affected all the wholesalers established in Western Canada, from Winnipeg to Victoria. If the rule had been restored to the tariff it would have meant that the distributing areas now occupied by the merchants of the coast and the northwest would be invaded by the large wholesalers of the eastern centres, and business, it was predicted, have been affected badly as a result.

Mr. C. P. Schwengers, of E. G. Prior & Co., Mr. W. G. Mackenzie, of Wood, Wallace & Leggett, of Vancouver; J. E. Elliott, of McLennan & McFeeley, and J. H. Hickaby, of R. P. Rithet & Co., formed the committee of the local wholesalers who went to Toronto and Montreal upon the mission. They went to Toronto, where they discussed with the Canadian Manufacturers' Association the stoppage of their application to have Rule 2 restored to allow of mixed carloads of hardware, liquors, groceries, etc., being sent to the coast, and failing to meet with success in Toronto, the Toronto wholesalers stating they could not see their way to meet the visiting representatives, they went to Montreal to interview the officers there and also the C.P.R.

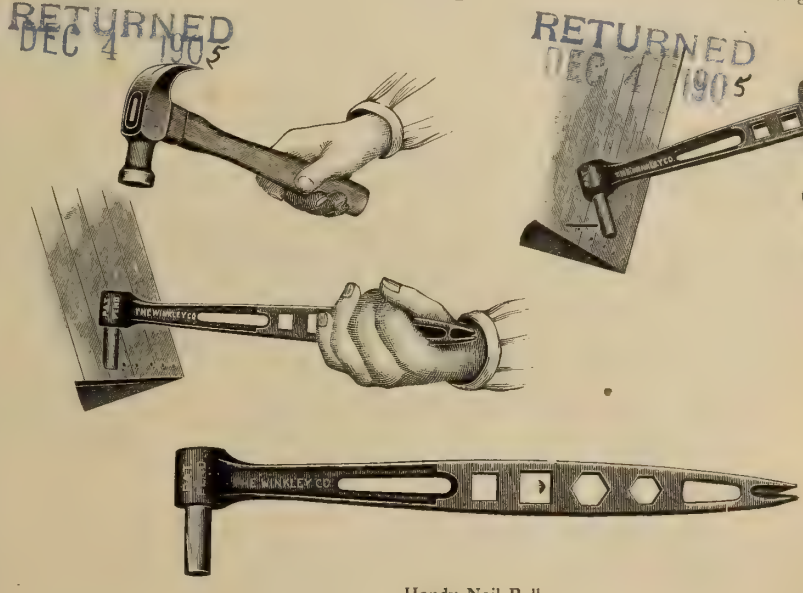
Having learned that the Manufacturers' Association and the C.P.R. officials could not meet on a common basis, they held a joint meeting, at which a basis of agreement was reached. The telegram now received states that the application for the restoration of the rule by the manufacturers has been abandoned.

The recent purchase of the Bruce copper mines by an English syndicate is already having the effect of creating activity in the town of Bruce and the indications are that it will become before long one of the most prosperous towns in New Ontario. It is expected that the syndicate owning the mines will employ 500 men so that a daily output of 500 tons will be procured.

A HANDY NAIL PULLER.

A handy nail puller, new to the Canadian market, is being sold now by the Munro Wire Works, Limited, of Winnipeg, Man. The illustrations show more clearly than can be expressed by words how this handy tool works. One or two sharp taps with the hammer gives the nail puller a secure hold of the most obstinate nail, and the rest is easy. As this tool can retail at 50c., it is meeting with a ready sale.

CANADIAN INDUSTRIAL NEWS.



The Ontario Government has announced that the new Colonial Cordage Co. has contracted to pay the Government 50c per day per man for the labor of prisoners at the Central Prison. The Colonial Company has taken over the machinery formerly operated by the Independent Cordage Co. and their new arrangement with the Provincial Government is much more profitable to the province that the contract which was approbated on November 1.

The prospects of Port Hope becoming a manufacturing centre are growing brighter every day. The enlargement of the Standard Ideal factory is a practical certainty, the probabilities of the establishment of a paper factory are extremely bright, and the representatives of a great metal industry have been recently in Port Hope looking over the situation with a view to establishing a large factory to employ 400 hands. These men were strongly impressed with the advantages possessed by Port Hope.

The Shawinigan Water & Power Co. has closed with the Westinghouse Company for a second 12,000 horse power generator, to be added to its present plant. An order for the first was placed with the same firm some ten months ago, and the Shawinigan Co. will presently have the two largest generators in use in Canada. Each will have a diameter of 28 feet. The new generator will be used largely in developing the mining districts of the province, particularly those relating to the production of asbestos. A considerable portion of the power, however, will be taken to Montreal for industrial purposes.

The advantage in a national sense of leaving the latch-string out and displaying a little hospitality is shown by the fact that already, as a direct result of the one day's visit to Canada of the National Association of Implement and Vehicle Manufacturers on September 29 last, American capital is being invested in three Ontario factories. Of these the largest is the Baines Carriage Works of Buffalo, which are being removed in toto to Hamilton. The factory gives employment to about 350 hands, with an output of about $350,000, and the reason for removing to Canada is simply that Canadian prospects are so bright. Two other American firms are establishing branches at Galt and Preston respectively, their representatives having realized during the one short day on the Canadian side that Canada was a good place to get into as fast as possible.

It is rumored that the Carriere & Laine works, Quebec, are likely to pass into the hands of a syndicate to be purchased by the Federal Government to be used as workshops connected with the Intercolonial Railway. The works did not shut down on account of scarcity of work. The firm had a large amount of most important orders to fill, in connection with contracts, when the Bank of Montreal made the demand for assignment. The failure of this old firm will be felt by dealers all through the Lower Provinces. The list of creditors is a long one. The firm was founded by Messrs. Wm. Carriere and Racine in 1862 and did a large business in stove, machine, engine and boiler manufacture. At one time they were engaged in shipbuilding, and they have lately conducted a hardware store in Quebec city. The rating was high, being placed by Bradstreet's at $100,000—$150,000 with first grade credit.

Handy Nail Puller.

Amongst the buildings to be erected in Hamilton are the following: G. J. White, two brick houses, $3,200; F. J. Lyne, dwelling, $1,600; J. Thompson, two houses, $3,400; J. Byers, dwelling, $1,500; F. S. Depew, two houses, $3,200; John Duff & Sons, factory, $10,000; F. W. Bird & Co., painting shop, $4,000, and W. Havercroft, dwelling, $1,500; J. W. Fernihaugh, four houses, $4,800.

IN THE LEAD!

In the **prompt** shipping of

Plate Glass

it is a well-established fact that we have constantly been in advance. The demand for our Plate is evidence that our efforts have been appreciated and has been such that to-day we have the **largest stock** and **plant** for handling same in Western Canada.

Quotations for Plate delivery sound at your station by wire or mail on receipt of specification.

G. F. STEPHENS & CO.
LIMITED
WINNIPEG, CANADA

Hardware and Metal Conditions in Manitoba.

(Market quotations corrected by telegraph up to 12 a.m. Friday, Dec. 1, 1905.)

Office of HARDWARE AND METAL
Room 511, Union Bank Building,
Winnipeg, Man.

WITH the arrival of cold Winter weather the first of the week came a renewed activity in many lines of hardware. In some lines trade was retarded by the mild weather but this condition of affairs is now at an end. There are not many changes to record this week, but all are advances. Petroleum has advanced 1-2 cent per gallon. Pig lead is now quoted at $4.75, an advance of 25c. There has been a general advance in lanterns of about 50c. per dozen.

Game Traps—There is still a brisk demand for game traps. Prices are maintained steadily as follows:

H. & N., discount	50 and 5 p.c.
Victor, "	66⅔ p.c.
Newhouse, "	35 p.c.
Bear	$7 each

Lanterns—The wholesale price is advancing and although the market is "open" the general advance is about 50c. per dozen for cold blast lanterns. We quote as follows:

Cold blast lanterns	$5 25 per doz.
Coppered cold blast lanterns	7 25 "
Cold blast dash "	7 75 "
Lift Lanterns	4 25 "

Bluestone—Price for 1906 delivery is $5.75 per cwt.

Wire—Prices are steady. We quote:

Barbed wire, 100 lb	$3 00
Plain galvanized, 6 to 8	3 39
" 9	2 50 2 90
Plain galvanized, 10	3 50
" 12	3 10
" 13	3 20
" 14	3 90
" 15	4 45
" 16	4 60
Plain twist	3 00
Staples	3 50
Oiled annealed wire, 10	2 96
" 11	3 02
" 12	3 10
" 13	3 20
Oiled annealed wire, 14	3 30
" 15	3 45

Annealed wires (unoiled) 10c. less.

Horseshoes—As noted last week, there has been an advance of 10c. in steel horseshoes. Prices are now quoted as follows:

Horseshoes, iron, No. 0 to No 1	$4 65
No. 2 and larger	4 40
Snow shoes, No. 0 to No. 1	4 90
No. 2 and larger	4 65
Steel, No. 0 to No. 1	5 00
No. 2 and larger	4 75

Horsenails—Discounts are as follows: "C" brand, 40, 10 and 7 1-2 per cent., "M" brand and other brands, 55 and 60 per cent. Add 15c. per box.

Wire Nails—The price has been steady since the recent decline to $2.60 per keg.

Cut Nails—Price, $3.00 per keg, base price. None selling because of the low price of wire nails.

Pressed Spikes—Prices are quoted as follows since the recent advance:

Pressed spikes, ¼ x 5 and 6	$4 60
" " 5-6 x 5, 6 and 7	4 25
" " ⅜ x 6, 7 and 8	4 10
" " 7-16 x 7 and 9	4 00
" " ½ x 8, 9, 10 and 12	3 90
" " ⅝ x 10 and 12	3 75

Screws—No change in price. Demand continues brisk at following unchanged discounts:

Screws, flat head, iron, bright	85 and 10 p.c.
Round " "	80 p.c.
Flat " brass	75 and 10 p.c.
Round " "	70 and 10 p.c.
Coach	70 p.c.

Nuts and Bolts—Discounts are unchanged. We quote:

Bolts, carriage, ⅜ or smaller	60 and 5 p.c.
" 7-16 and up	55 p.c.
Bolts, machine, ⅜ and under	55 and 5 p.c.
" 7-16 and over	55 p.c.
Bolts, tire	65 p.c.
Bolt ends	55 p.c.
Sleigh shoe bolts	65 and 10 p.c.
Machine screws	70 p.c.
Plough bolts	55 p.c.
Square nuts, case lots	3c. discount.
" " small lots	2½c. "
Hex " case lots	3c. "
" " smaller lots	2½c. "

Rivets—Discounts continue as follows:

Rivets, iron	60 and 10 p.c.
Copper, No. 8	29½
" No. 12	33

Coil Chain—Unchanged in price. We quote:

Coil chain, 3-16 inch	9.25
" ¼ inch	7.20
" 5-16 inch	5.20
" ⅜ inch	4.60
" 7-16 inch	4.45
" ½ inch	4.30
" ⅝ inch	4.10
" ¾ inch	4.00

Shovels—Discounts on spades and shovels continue 40 and 5 per cent.

Harvest Tools—Discounts are now 60 and 5 per cent.

Axe Handles—Quoted as follows:

Axe handles, turned, s.g. hickory, doz	$3 15
No. 1	1 90
No. 2	1 60
Octagon extra	2 30
No. 1	1 60

Axes—Prices are quoted as follows:

Bench axes, discount off list	40 p.c.
Broad " " "	25 p.c.
Royal Oak, per doz	$ 6.25
Maple Leaf, "	8.25
Model "	8.50
Black Prince "	7.25
Black Diamond "	9 25
Standard Flint Edge, per doz	8.75
Copper King, per doz	9 00
Columbian, "	10.75
Handled axes, North Star, per doz	7.75
" " Black Prince, per doz	9.25
" " Standard Flint Edge, per doz	10.50
" " Copper King, per doz	11.00

Butts—The discount on wrought iron butts is 70 per cent.

Churns—The discounts from list prices are 45 and 5 per cent.

Chisels—Quoted at 70 per cent. off list prices.

Auger Bits—Discount on common auger bits is 65 per cent.

Blocks—Discount on steel blocks is 35 per cent. off list prices; on wood, 55 per cent.

Fittings—Discounts are quoted as follows:

Wrought Couplings	60 p.c.
Nipples	65 and 10 p.c.
T's and elbows	10 p.c.

Malleable bushings ..... 50 p.c.
Malleable unions ..... 60 p.c.

Grindstones—The price is now 1 3-4c. per lb.

Fork Handles—The discount is 40 per cent. from list prices.

Hinges— The discount in light "T" and strap hinges is 65 per cent. off list prices.

Hooks—Prices are quoted as follows:

Brush hooks, heavy, per doz $8.75
Grass " per doz. 1.70

Draw Knives—The discount is 70 per cent. from list prices.

Rules—Discounts are 50 and 10 per cent.

Washers—On small quantities the discount is 35 per cent.; on full boxes it is 40 per cent.

Wringers—Selling at following prices:

Royal Canadian per doz $30 05
R. B., per doz 34.07

Files—Discounts are quoted as follows:

" Arcade " ..... 75 p.c.
" Black Diamond " ..... 60 p.c.
" Nicholson's " ..... 62½ p.c.

Building Paper—There is a steady demand for all lines at firm prices. We quote:

Joliette, plain	40c.
" tarred	65c.
Cyclone, plain	55c.
" tarred	80c.
Anchor, plain	55c.
" tarred	65c.
Pure fibre, plain	60c.
" " tarred	80c.

Tinware, Etc.—We quote again as follows:

Tinware, pressed, retinned ..... 70 and 10 p.c.
" " plain ..... 75 and 2½ p.c.
" pieced ..... 30 p.c.
Japanned ware ..... 37½ p.c.
Enamelled ware, white ..... 45 p.c.
" Famous ..... 50 p.c.
" Imperial ..... 50 and 10 p.c.

Cordage—The price is steady since the recent advance. We quote as follows.

Rope, sisal, 7-16 and larger, basis	11 25
Manila, 7-16 and larger, basis	15 75
Lathyarn	11 25

Solder—Quoted now at 21c. per lb. with concessions for large quantities.

Corrugated Roofing and Siding—Prices are still quoted as follows:

ROOFING.

(Lengths 3, 4, 5 and 8 ft.)

	Painted	Galvanized

F.F.G., Dupont's	5 00

Iron and Steel—Prices are quoted as follows:

Bar iron (basis)	2 60
Swedish iron (basis)	4 75
Sleigh shoe steel	2.75
Spring steel	3 2
Machinery steel	3 50
Tool steel, Black Diamond, 100 lb	9 50
Jessop	12 00

Black Sheets—No change in price. We quote as before:

Black Sheets, 10 to 16 gauge, 100 lb	3 50
18 to 22 gauge	3 75
24 gauge	3 90
26 gauge	4 00
28 gauge	4 10

Galvanized Iron—The market is steady at the recent advance. We quote:

Apollo, 16 gauge	3 90
18 and 20 gauge	4 10
22 and 24 gauge,	4 45
26 gauge	4 40
28 gauge	4 65
30 gauge or 10¾ oz	4 95
Queen's Head, 24 gauge	4 60
26 gauge	4 65
28 "	4 90

Tin Plates—XXI plates have been advanced 50 cents. We now quote as follows:

Tinplate, IC charcoal, 20 x 28, box	9 50
" IX "	11 50
" XXI "	13 50

Terne Plates—Quoted at $9.00.

Canada Plates—The price has advanced 25c. per box. We quote:

Canada plate, 18 x 21, 18 x 24	3 50
Canada plate, 20 x 28	3 75
Canada plate, full polished	4 25

Sheet Zinc—As noted last week there has been an advance and the price is now $8.50 for cash lots and $9.00 for broken lots.

Pig Lead—The price has been advanced to $4.75 per 100 lbs.

Iron Pipe—Prices are steady at the recent advance. We quote:

Black iron pipe, ⅛ inch	....
" ¼ "	2 55
Black iron pipe, ⅜ inch	2 85
" ½ "	3 15
" ¾ "	4 00
" 1 "	5 75
" 1¼ "	7 85
" 1½ "	9 40
" 2 "	12 90

Petroleum and Gasoline— There has been an advance of 1-2 cent per gallon in petroleum. Prices are now quoted as follows:

Silver Star, per gal	21c.½
Sunlight "	22½c.
Eocene "	24½c.
Pennoline "	25½c.
Crystal Spray "	24½c.
Silver Light	22½c.
Gasoline, 72-72 (Engine)	25c.

(In barrels f.o.b. Winnipeg.)

Paints and Turpentine—Business is brisk in general lines. We quote as follows:

White lead (pure)	$7 00
Bladder putty, in bbls	0 02½
" " in kegs	0 02¾
Turpentine, pure in barrels	1 04
Less than barrel lots	1 09

TORONTO TRAVELERS' OFFICERS.

At the general meeting of the Commercial Travelers' Association held in Toronto last Saturday evening, President T. McQuillan was elected by acclamation for a third term. First Vice-President L. A. Howard was re-elected by acclamation, and the following were nominated:

Second vice-president, F. C. Armstrong, George West (one to be elected) treasurer, J. H. Butler, E. Fielding (one to be elected).

Directors (Toronto board)— J. W. Charles, E. F. Crossland, J. G. Cane, W. M. Fielding, Robert Gemmell, T. Glover, John Gibson, James Knowles, Robert Keys, James Lumbers, M. Lamont, W. J. Micks, A. C. Rogers, S. M. Sterling, C. J. Tuthill, Joseph Taylor, R. J. Wylie, F. J. Zammers. Nine to be elected.

The annual meeting will be held on December 28.

HINTS FOR THE YOUNG CLERKS.

THERE is a kind of notion abroad that anyone can run a store, and that neither education, nor technical training, is necessary to effect sales.

There is little question but that this lack of knowledge is the primary cause of the failures of so many storekeepers. The ordinary mechanic is expected to serve some time at least in the educationary process. The bookkeeper, the accountant, and the lawyer are all expected to go through a course of training before being considered qualified to follow their respective callings, but the storekeeper is considered as outside such categories and the idea has grown of late that ignorance is no barrier to his success.

It would be well for the young store-clerk to at once dispel from his mind any such thought. Although the day for a lengthy apprenticeship to merchandising has no doubt passed, the methods of having to deal with staple goods in their natural state having fallen into disuse, owing to the introduction of advanced and scientific methods still the fact is, that one class of knowledge has only given place to another. The time is fast approaching when it will be necessary for hardware clerks to be intimately acquainted with the goods which they handle, not merely as to commercial knowledge, but as to their technical and scientific character.

The storekeeper occupies the position of the true "Middleman," the public have little knowledge beyond him, and the storekeeper who sets himself to become completely master of the position which he occupies, is the one who will ultimately gain the confidence of his clients, and the supreme place in his business.

To the young clerk just starting in his business there is one characteristic that should be invariably present and that is "neatness" in his personal appearance. Nothing strikes a customer on entering a store like the personal appearance of the attendants in it, and the customer naturally, at once expects the store to take character from the attendant who approaches them. A neat and tidy clerk invariably means a neat and tidy store. To cultivate neatness in his person soon develops a character of tidiness which follows every act.

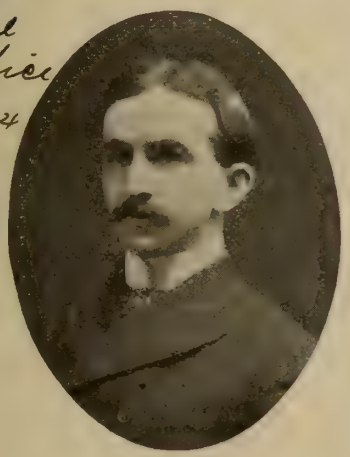
The next point of importance for the young clerk to study is his "manner" of handling the goods. He should cultivate a graceful, almost fastidious manner of touching and handling the goods with his customers. A careful gentlemanly manner in this regard goes a considerable way towards impressing the purchaser with the importance of the particular article he is selling to them.

Another important feature and one which cannot be too strenuously insisted upon, is that of "order." "A place for everything and everything in its place." Nothing is more annoying to a customer than to have to stand by while a search is being made for the article required. Everything should be kept in regular order, This, no doubt, causes a good deal of regular supervision and necessitates constant care, but its importance cannot be over-estimated, not only with regard to importance to the customer, but also, from a point of economy and saving of expense. An instance of this came recently to light in a certain store in which an article commanding only a very small sale was relegated to an unimportant place in the rear of the store. It, however, sometime afterwards became a ready seller and a great amount of time was lost by the salesmen having to travel backwards and forwards whenever it was wanted. A new clerk who had just entered the store, noticed this inconvenience and suggested placing sufficient stock for immediate requirements in a handy position. The amount of time thus saved meant a good deal of momentary value to his employer.

Another feature of no less importance is that of "promptitude." Few customers really come to purchase until they are actually in need of the goods themselves. Promptitude, therefore, in dealing with his business is of the first importance and the young clerk should cultivate from the outset to be prompt in all his actions. "Do it now" is the motto which is being adopted by the up-to-date business men. Nothing should be adjourned till to-morrow which could possibly be finished to-day, even though it may mean remaining at one's post a few additional hours occasionally. By this means a spirit of promptitude is cultivated in every act of the clerk which will ultimately tell in minimizing the amount of work which he has to accomplish. If from the moment of rising in the morning he sets himself to be at his post immediately on time to commence his routine according to a given order, and to complete each duty before taking on his next, he will soon find that his duties are performed with an ease and regularity which will make business a pleasure instead of a drudgery. This principle of promptitude should be in evidence when dealing with customer's orders. Never promise delivery of goods unless the certainty of carrying out that promise is assured. Nothing is more annoying to a customer, or more detrimental to the reputation of a store, than for a customer to be disappointed in the delivery of an order. Once this occurs reputation is affected in such a way as to be very difficult of amendment.

FOREIGN COPPER MARKET.

MORRISON, KEKEWICH & CO., London, under date of November 17, say:



"Bi-monthly copper statistics show a decrease of 912 tons in stocks, now reduced to 5,685 tons, and an increase of 413 tons in total visible supplies, which now stand at 10,185 tons. Larger shipments from Australia and Chili are responsible for the increase. Refined sorts have been in active demand and consumers, recognizing the scarceness of supplies have shown no hesitation in paying higher prices. Notwithstanding the commendable disposition on the part of American producers to prevent

further advances, the demand has been so enormous that by sheer force of compulsion, prices have been raised. The outlook for great activity for next year is practically assured, and if the values are kept at a reasonable level an urgent demand seems certain. Standard warrants are still strongly controlled, bears having been obliged to pay advancing prices on almost every transaction. Cash standard is £2 2s. 6d higher and three months £1 7s. 6d. The principal American producers are not sellers before February shipment."

A BRAND NEW TRAVELER.

MR. W. A. WOOD, who has been for the past eight years connected with the firm of Caverhill, Learmont & Co., in their Montreal warehouse, has received a highly deserved promotion, and is now making his first trip as representative for that firm in Eastern Ontario. His long training has given him an experience which will be

of the utmost value to him in selling goods and his success is assured.

Mr. Wood is taking the place of R. D. Leslie, who is going into the agency business in partnership with A. C. Jenkins, agent for Smith & Hemenway, of New York, and other firms. Mr. Leslie is now introducing Mr. Wood on his ground.

MILLER-MORSE HOCKEY CLUB.

THE first annual meeting of the Miller-Morse Hardware Co. hockey club was held in the warehouse in Winnipeg on November 10. If the enthusiasm displayed at the meeting is any criterion, prospects are bright for a successful year. The election of officers resulted as follows: Patrons, F. M. Morse. F. W. Morse, A. Reed, H. Robson; hon. president, H. Miller; president, F. A. Sermon; 1st vice-president, W. A. Kenning; 2nd vice-president, J. J. Sullivan; secretary-treasurer, W. L. Cordingley; captain, D. G. Sibbald; executive committee, Messrs. W. M. Irwin, J. H. Foulds and F. N. Rowat; delegates to association, Messrs. Irwin and Sibbald.

PRESENTATION AT LONDON.

Last Friday Mr. J. A. Brownlee, successor to Wm. Wyatt & Son, was called to the tin department of the McClary Manufacturing Company, London, and on his arrival the foreman, Mr. T. A. Greer, handed him a fine smoking set, accompanied by the following address:

"Mr. J. A. Brownlee:

"Dear Sir,—Having severed your connection with this firm, we, as fellow employes of the McClary Manufacturing Company, feel that we cannot let the occasion pass without expressing our regret at the ending of many years of good comradeship and pleasant association. We ask you to accept this as a slight token of our regard and hope that in time to come as you draw comfort from its contents your mind may revert to the old shop and the boys. We wish you success in your new enterprise.

"(Signed) JAS. BOYLE,
"G. BULL."

Mr. Brownlee though very much surprised, suitably thanked his former fellow employes.

N. W. C. T. NOMINATE OFFICERS.

ON Saturday night, November 25, the Northwest Commercial Travelers' Association held their annual general meeting for nomination of officers in the Board Room of the Winnipeg Exchange. President John Horne presided. The following nominations were made:

President—D. J. Dyson (elected by acclamation.)

Vice-President—A. H. McEwen (McClary Mfg. Co.), W. W. Bole (Bole Drug Co.), J. E. McRobie (Secretary Retail Hardware Association), J. H. J Murphy (Royal Crown Co.)

Treasurer—L. C. MacIntyre (Paulin-Chambers Co.), elected by acclamation.

Directors—Geo. Wilson, W. H. Johnston, F. W. Drewry, F. H. Nesbitt, S. R. Roe, F. W. Adams, A. S. Lock, F. M. Morgan, Thos. Montgomery, D. J. McTaggart, Geo. Barrett, N. Musgrave, E. Dagg, J. M. Scott, R. Neve, Jno. Brockish, Thos. Davidson, W. C. McLean, D. Dingle, A. E. Whyte.

Nominations for B. C.

Vice-Presidents for Vancouver—E. F. Gerster, T. J. Stephens, Thos. Parkinson.

Vice-President for Victoria—W. W. Duncan.

Directors for Vancouver—R. Potter, C. P. Egan, F. A. Richardson, C. A. Ross,

Director for Victoria—J. C. Devlin.

Director for New Westminster—Fred Lynch.

Director for Kootenay—Geo. Munn.

There was a long discussion of a project to rent club rooms for the members in Winnipeg, and a committee was appointed consisting of Messrs. A. L. Johnson, McGowan and Wilson to make inquiries as to suitable rooms and report at the annual meeting on December 16.

As some changes in the charter of the association were deemed advisable a committee composed of D. J. Dyson, G. F. Bryan, A. L. Johnson and F. J. C. Cox was appointed to make recommendations and report.

GENERAL MANAGER RESIGNS.

MACHINERY circles in Montreal have been interested in the announcement made public a few days ago that Mr. H. H. Henshaw has resigned from the directorate and general managership of Allis-Chalmers-Bullock, Limited, of that city.

Mr. Henshaw spent his early childhood at St. Hyacinthe, Quebec, and afterwards, coming to Montreal, he entered the service of the Grand Trunk Railway. He gradually gained the recognition of Montreal business men, and was appointed secretary of the Royal Electric Co. When this company became merged with the Montreal Light, Heat & Power Co., Mr. Henshaw was chosen secretary-treasurer, a position which he occupied until last Spring. On June 1 last he was appointed director

H. H. Henshaw, Montreal,

Who has resigned from the General Managership of Allis-Chalmers-Bullock, Limited.

and general manager of Allis-Chalmers-Bullock, Limited, but has retired within the past few days.

WINDOW ADVERTISING.

A hardware store that pays a great deal of attention to its ledge trims, fixtures and interior arrangement generally and lets the window stand from one week's end to the other is getting things reversed. If there is any difference the window should be better than the interior of the store. The window is to get people to come inside. A fine trim on the inside is no good for that purpose. If you get customers inside the store once you have progressed far towards getting their trade. Hence the importance of "pulling in" windows.

Thos. Oliver, hardware merchant, of Copper Cliff, Ont., accompanied by his wife, was a visitor in Montreal this week.

TARIFF COMMISSION'S MONOTONOUS LABORS

THE Dominion Tariff Commission is a model investigating body, and the patience, thoroughness and urbanity displayed by its members in prosecuting the work they have in hand cannot otherwise than impress most forcibly the people of the country. The tales they are compelled to listen to must become monotonous to the Commissioners, because they are oft-told and sometimes poorly told, but these gentlemen never display any lack of interest and are never lacking in courtesy.

A review of one day's proceedings demonstrates the complex character of the tariff, and the practical impossibility of reconciling conflicting interests. There are the farmers, who complain, ably, and not without reason, of the hardness of their lot, and demand the wiping out of all unnecessary taxation. They would have no duty on binder twine, and as for agricultural implements they would have the protection now given the manufacturers in these lines reduced to 15 per cent. The implement men, on the other hand, find too many American-made goods coming in, and would like either a higher duty on the finished article, or lower duties on the raw material. The malleable iron men, who supply raw material to the implement men and others, think they must have more consideration if they are to live, and if they are given what they want the users of their lines of goods, if not given an equivalent, must suffer. Then there are the binder twine men, who have no protection at all, and think they should have at least 20 per cent., and are willing to give a guarantee that if their request is acceded to the price of their product to the Canadian farmer will not be increased. And so on down the list.

Almost every man knows about how to frame a tariff to suit his own interests, or at least he thinks he does, but the men who have the duty of deciding between so many conflicting views and framing a tariff which will best suit the interests of the country as a whole, are to be more pitied than envied.

During the week the Commission has held sessions at various towns and cities between Windsor and Peterboro and is now rounding up its labors in Ontario. It is practically decided, however, that a general tariff revision will not be made at Parliament's next session.

At the Windsor meeting the Standard Paint & Varnish Company asked that no duty be imposed on tin plates. Mr. Brodeur asked if they had ever got any rebate on tin cans. The company's representative replied no, and did not know of any combine among tin can manufacturers.

D. B. Anthony, wire fence manufacturer, requested that No. 11 gauge wire for fence purposes be added to the free list, while the McGregor-Banwell Fence Company, of Walkerville, asked that the duty on structural iron tubing for farm gates be removed, as it is not made in Canada.

Requests Made at Hamilton.

At Hamilton A. B. Petrie, of the Petrie Manufacturing Company, manufacturers of cream separators, asked that these articles should be taken off the free list and be placed under a duty of 25 per cent., and within the action of the dumping clauses. The industry was a struggling one, and was not yet able to satisfy the whole demand. The United States manufacturers, however, were trying to kill it altogether by selling separators in Canada at half the price at which they are sold in the United States.

J. A. McMahon, of the Union Drawn Steel Company, and H. J. Waddie, of the Canada Drawn Steel Company, wanted the duty on cold-drawn steel shafting made 30 per cent. in place of 5 per cent., as at present. This latter duty they did not consider fair, as they were paying a duty of $7 a ton on the raw material.

Other deputations heard by the Commission at Hamilton made the following requests :

Window Glass Machine Company, Cayuga : Refund of duty on plant or increased duty against Belgium on window glass.

Hamilton Gas Light Company : Removal of duty on coal or imposition of two cents a bushel on domestic coke, though they are now paying 8 per cent. dividend.

John Bertram & Sons Company, Dundas : An increase of 5 per cent. in duty on tools, machine tools being now 25 per cent. and small tools 30 per cent.

Canadian Westinghouse Company, now employing 650 men, asking that request for duty on brass be not granted, and promising to double their employes in four or five months if industry is not interfered with.

H. Barnard, stamps and stencils : That a duty be placed on name plates on cream separators.

The International Harvester Company not being ready with their case, it was arranged that it should be presented at Ottawa if there was an open session there.

Farmers Heard at Brantford.

Demands for a lower tariff were made by farmers at Brantford, the farmers insisting that farming could not be made to pay under existing tariff conditions, and pointing out that it was impossible to obtain hired help because the tariff discriminated in favor of the manufacturer, who thus gobbled up all available employes.

W. C. Good, once a professor in the Agricultural College at Guelph, now a Brant County farmer, declared that he had made only $120 a year out of a 120 acre farm. He held the tariff laws to blame.

The binder twine manufacturers stated that they could not live another year under present conditions. They suggested an ad valorem duty of 20 per cent., or a bounty of at least $25 a ton on all twine made in Canada.

About a dozen cement manufacturers were present and through Mr. Kilborn, of Owen Sound, pictured the industry as in a very bad way. They thought a straight duty of 10 cents a barrel would give relief.

L. E. McKinnon, of St. Catharines, wanted higher protective duties on certain lines of saddlery, hardware and builders' hardware. The Malleable Iron Works also asked for an increase in the duty on steel and iron castings.

Takes Issue With Farmers.

Farmers were again heard from in large numbers at Guelph, but they met with sharp criticism from Mr. J. M. Taylor, of the Taylor-Forbes Company.

Mr. Taylor in opening referred briefly to the cream separator question. He presented a letter from the Vermont Farm Machine Company in which they made a tempting offer to the Taylor-Forbes Company to take over their agency. A proposition was also received from an English concern in which they stated that they could put cream separators on the Guelph market at 20 per cent. less than the present local market price. He thought the farmers were the only men making money to-day and quoted the Bureau of Agriculture statistics showing an increase in farm values of $69,000,000. In Guelph alone, he said, there are reported about 500 retired farmers who are loaning money at 1 per cent. per month. On the other side, there are not 500 retired manufacturers in the country. "Judging from the high prices they exact," said Mr. Taylor, "the farmers are the biggest combine of all the combines existing to-day. They should live and let live."

Mr. Taylor then went on to speak of the requirements of his firm, the Taylor-Forbes Company. They were at present selling goods below the price obtained four years ago, and their pay roll showed that to-day their workmen were being paid 30 to 35 per cent. more than when increased prices were being obtained for goods. Then there was the American competition to be met, and though the dumping clause was no doubt meant for good, it had signally failed in the purpose for which it was intended. The employment of foreign low-priced labor and the enormous field of distribution were cited as reasons why Americans were enabled to manufacture at less cost than in Canada. An instance was cited where lawn mowers were shipped here, duty and freight paid, at a figure below factory cost. This accounted for a diminished sale of 60 per cent. The want of regularity or similarity in appraisement at the various ports was complained of. They asked that the dumping clause be vigorously enforced, that steam coal for power purposes be admitted free, that lawn mowers be appraised upon values at which they are regularly sold in the United States, that a competent hardware appraiser be given charge of a department of hardware at Ottawa, and that printed matter of values for duty be sent to every Customs port, covering such articles—when a value has been determined upon—so that all will be uniform.

In closing Mr. Taylor stated that the manufacturers of hardware had no association and were not in any combine.

At Berlin Mr. W. J. Moody, of the Alpha Chemical Company, protested against the proposal to put a duty on tin plate, and asked for an increase on stove polish and shoe polish from 25 per cent. to 35 per cent., and on ink from 20 per cent. to 35 per cent., and for the free admission of carnuba wax, used in making shoe polishes.

At Peterboro the only manufacturers heard were the Canadian General Electric Company, for whom Mr. G. W. Watts appeared. He claimed that at present there was practically no protection for that industry, the tariff on the finished product being 25 per cent., while that on the raw material was 20 per cent., being only a net protection of five per cent. against the world, except Great Britain. He asked that if the duty on the raw material was increased, a corresponding increase be made on the finished product.

FREE TRADE AND COMBINES.

CONSERVATIVE and Liberal newspapers are again in controversy over the tariff question as a result of the airing of the opinions of farmers, manufacturers, etc., before the Tariff Commission. One of the most interesting contributions to the discussion is the following letter by Watson Griffin, in the Toronto Globe of Nov. 29 :

"In the course of an editorial on combines, the Globe of Nov. 24 said : 'But under a protective tariff the big firms in combination crowd out the little ones by arranging for the shutting off of their supplies. This can easily be accomplished by the aid of tariff restriction, but is impossible without it.' Mr. H. W. Macrosty, who has made a thorough study of combines in the United Kingdom, states that the big firms in combination in that country do exactly what the Globe says is impossible without protection.

"But it is not necessary to go to England for examples of how combines can cut off supplies and dictate to consumers under a free trade system. Several years ago, when Canada had absolute free trade in wire rods, all the consumers of steel rods in the Dominion, excepting James Pender of St. John, N.B., were forced to sign long-term agreements not to buy steel rods except from the United States Steel Trust, which not only arranged to cut off their supplies of raw materials, but threatened to crush them out of existence by underselling their finished products unless they yielded. The consumers of steel rods were absolutely prohibited from buying in England. James Pender, of St. John, N.B., who held out against the trust, would have soon been forced to yield but for the fact that Parliament enacted the dumping clause, a purely protectionist measure. In all the world's history of tariff legislation there was never enacted a measure whose aim was more unqualifiedly protective than the dumping clause, and it would never have been thought of but for the fact that under a system of absolutely free trade in steel rods the United States Steel Trust took the Canadian consumers by the throat. If Canada had had a high protective tariff on all manufactures of steel the United States Steel Trust would never have dictated terms to the Canadian consumers of steel rods. If the Canadian tariff on all kinds of manufactures were abolished or reduced Canadian manufacturers would be absolutely at the mercy of United States combines, which would dictate where they must buy their raw materials and the prices at which they must sell their finished products. While the dumping clause is a purely protectionist measure and has made it less easy for United States manufacturers to dictate terms to Canadians, it is a poor substitute for a stable protective tariff.

"An old farmer, being asked what he thought of the 'dumping clause,' said : 'It reminds me of the draw-bridge we used to have over the river near our market town many years ago. The farmers on their way to market were often put to great inconvenience while waiting for vessels to pass up and down the river, while, on the other hand, the vessels sometimes had to wait for the farmers' wagons to pass over. It was a great inconvenience to everybody, and one dark night, when the bridge was open, a young farmer drove into the river and was drowned, with his horse. After that a permanent bridge was built, high enough to let the boats pass under while the farmers' wagons went overhead. The dumping clause seems to me to be draw-bridge protection, and the sooner it is replaced by permanent, stable protection the better for everyone.' "

lathing

If you are catering to the Building Trade you know that builders who have once used "Hayes" Metallic Lathing cannot be induced to use any other. Its grip upon the mortar is so tenacious that it takes but half the quantity required by wood or cheap metal lathing, makes partitions much narrower and has a lightness, rigidity and freedom from "buckling" found in no other make of metal lathing. It's fireproof, ratproof, and sanitary. No live builder should overlook the superiority of "Hayes" Metallic Lathing.

OUR NEW $10,000 CATALOGUE We have just issued the most complete Catalogue ever offered to the Metal Trade. It is a veritable encyclopædia of all that's practical and beautiful in the Art Manipulation of Sheet Metal. Book contains 440 pages, superbly bound and illustrated. We send it free upon request, to any builder, contractor or dealer of responsibility.

THE METALLIC ROOFING CO.
OF CANADA, Limited
(Established Twenty Years)

"Metallic" Crestings and Finials
"Metallic" Corrugated Iron
"Metallic" Eavetrough and Conductor Pipe
"Metallic" Pressed Zinc Ornaments
"Richardson's" Pressed Metal Doors and Sheet Metal Building Materials of every description.

413

NO SAW-MAKERS' COMBINE.

MR. DIETRICH, of the firm of Shurly and Dietrich, Galt, manufacturers of the Maple Leaf brand of saws, takes very strong exception to the article in the Toronto Star dealing with the saw-making industry of Canada, and alleging a combine on the part of the manufacturers. It declares that the allegation is wholly unfounded—that, as a matter of fact, no combination whatever exists in this industry, so far as his knowledge extends.

"I regard the article," Mr. Dietrich says, "as rather a slur on Canadian manufacturers, inasmuch as it glorifies the American saw-maker over his competitor on this side of the line. But the fact that Shurly and Dietrich are enabled to enter the American field and compete successfully with the American saw-maker, in quality if not price, will, perhaps, be accepted as establishing the status of the Canadian saw-making industry to-day.

"The price of saws in Canada, it is said, has risen. I may say that the very opposite is the case. All kinds of our saws are sold much cheaper in this country to-day than ever before. This has been the case since the adoption of the tariff of 1878. Up to that time the saw-making industry was struggling against the competition of the United States manufacturers, who almost controlled this market. The business done by Canadian saw-makers was too small to admit of their embarking in it on a large scale and with improved machinery; but when the tariff was raised from 17 1-2 to 35 per cent. it gave an impetus to the home trade, which has since been maintained. As a result, prices, instead of advancing, were reduced 5 per cent. the first year, and have been gradually dropping until now we are selling many lines of saws at over 50 per cent. lower than before the tariff change. Indeed, in several lines we are selling absolutely without profit, and the profit on any saw we make is only very reasonable. The volume of business enables us to maintain prices at a low level. We can say, without boasting, but as a mere mention of industrial fact, that we manufacture more saws than any other two or, perhaps, three manufacturers in this country. And this reminds me that the Star article gives the number of Canadian saw factories as three. The fact is there are nine.

"The Star's intimation that American saw manufacturers are establishing in this country is really no part of the question at issue. An explanation, I fancy, lies in the circumstance that recently our shops were destroyed by fire. Destruction of the factory was a serious setback, and for a considerable time crippled us in our efforts to meet orders. What more natural than that our neighbors should come over with the object of occupying our territory and taking away our trade. Our extremity was regarded as their opportunity, you see. But

CONDENSED OR "WANT" ADVERTISEMENTS.

Advertisements under this heading, 2c. a word first insertion; 1c. a word each subsequent insertion.

Contractions count as one word, but five figures (as $1,000) are allowed as one word.

we're solidly on our feet again, prepared to meet any and all competitors.

"Now, so far as the allegation of our control of the R. H. Smith Co., Limited, of St. Catharines, goes there is no truth in it. Shurly and Dietrich as a firm own no stock nor have any proprietary interest in that company. It is true that individually we hold stock in it, as we do in other manufacturing industries, but that circumstance does not by any means justify the assertion that we control the business—which we most assuredly do not. The board of directors, elected by the six shareholders, do that. We make this explanation in fairness to the other directors of the R. H. Smith Co., who are not concerned in our business and against whom an unfair and undesirable imputation has been cast by the statement of the Star, which journal, it is to be regretted, did not apply to us for its facts before proceeding to class the saw-making industry in Canada among combines, which it is undertaking to expose."

It has been announced that plans are being prepared for a copper smelter at Bruce, which has been designed to treat all the copper produced in the district. The smelter will be under the control of J. J. Case, of Dollar Bay, Mich., who is said to be one of the leading authorities on copper smelting on the continent.

ADVERTISING IN THE COLONIES.

AT the October dinner of the Sphinx Club, in London, England, the subject, "Why Should we Advertise in the British Colonies?" was discussed. In referring to the matter the Engineering Times publishes the following:

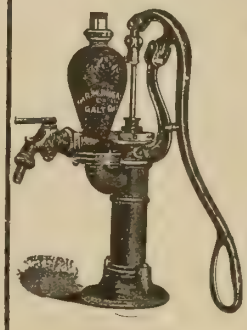
"Mr. J. H. Turner, agent-general for British Columbia, said that there was no doubt that good advertising would tend to the advancement of British merchants in the colonies. British Columbia was increasing in population, had an excellent position on the Pacific, and must become an important part of Canada.

"Mr. J. W. Taverner, agent-general for Victoria, pointed out that the colonies were anxious to trade with the Mother Country. Germans and Americans, however, were very successful in getting hold of a large part of that trade. There was still a large field for British manufacturers, and it was the duty of people in Great Britain to do all they could to do business with their brethren across the seas.

"Mr. J. Howard, agent-general for Nova Scotia, said British manufacturers must advertise in order to counteract America's natural advantage of geographical position.

"Mr. J. E. Jenkins, agent-general for South Australia, thought advertisements must be of a nature to 'fetch the people.' The Americans were the best advertisers in the world. Australia wanted trade with Great Britain, but it was the best bargain which was most taking, and British manufacturers should see to it that their goods were the best bargain. Australians did an enormous trade with a small population.

"We have in our columns repeatedly called attention to the importance of advertising in the colonies."



One of the distinguishing traits between the British manufacturer and his American competitor lies in the eagerness with which the latter seeks publicity and the indifference of the former as a rule. To this very fact can be attributed a large measure of the success the American manufacturer has had in competing with the outside world. He realized before any other the all important of having his name and goods well known by the class of people to whom he catered.

It is not from mere undirected publicity that results are obtained. There is a law in advertising as well as in any department of business. A writer in American Industries, speaking of publicity that pays, says: "It is characterized by the same traits that 'pay' in other walks, by earnestness, by sincerity, by persistence, by integrity, by aptness, by adaptation, and by seizing your topic in such a way as primarily to make it interesting."

When the British manufacturer realizes the big field there is for him in the colonies, a large part of which can be secured only by advertising in a proper medium, and makes a more thorough study of the science of advertising, then will he secure a trade that he is not now getting, but which belongs to him by the fact that tariff regulations were made to have it so.

PAINT, OIL AND BRUSH TRADES

ENGLISH LINSEED OIL MARKETS.

IMPORTATIONS of seed for English linseed oil crushers for the first ten months of 1905, are 1,700,301 qrs. against 2,454,708 qrs. in 1904. With ten months expired the figures are 700,000 qrs. behind last year, and actually 66,000 qrs. behind 1903, so that there is no fear of a great excess of seed. The force of reviving trade ought, therefore, soon to make itself felt in linseed oil, and higher prices are likely.

The following table shows the receipts in England for the first nine months in the past three years :

	1903. Qrs.	1904. Qrs.	1905. Qrs.
Imports of linseed—			
From Russia	159,778	135,477	139,050
" United States	30 057	960	——
" Argentine	798,394	1,417,416	798,132
" East India	630,839	624,15	514,767
" Other countries	78,057	82,341	94,116
Totals	1,702,915	2,290,309	1, 42,685

It will be noticed that the abnormal imports from the Argentine Republic have ceased, and that India is sending us less than for the two preceding years and nothing whatever from the United States.

THE CARE OF PAINTERS' TOOLS.

In the paint shop, says the American Blacksmith, a place is needed for the storing of all tools and appliances, or a place for everything and everything in its place. Sponges and chamois should be kept in dry places. Shellac brushes should be washed after being used, and kept in a drawer or box, so that when they are needed they will simply have to be placed in alcohol or shellac a day before. New or partly-used brushes should never be placed in water; the only proper way to keep them in good condition for any length of time is to place them in a large pot or keg of mixed color, just enough paint so that the bristles will not touch the bottom. Varnish, enamelling, and staining brushes are best kept clean and straight by suspending them in oil, either with a patent brushholder or by boring holes through the handle and fixing them with a wire.

TURPENTINE'S HIGH PRICES.

VARIOUS explanations of the high prices of turpentine have been offered, some stating that the high prices are due to actual shortage in production and receipts and a simultaneous increase in demand and shipments. This is hardly borne out by the figures in the case of the Savannah market, since the total supply of spirits on this crop to date, and the stock remaining on hand this year are not much less than last year at this time. In partial explanation it may be said that the southern ports have suffered this year from the fear of yellow fever, and the shipments that usually pass through those ports have gone to Savannah instead. With respect to rosins the figures show a considerable shortage, the receipts this year having been about 2,000 barrels less than last year, while the shipments have exceeded those of last year by over 22,000 barrels. This partly accounts for the advance, but it does not explain why the normal supply of rosins has not come to market. It is well known that there are a number of organizations of producers or factors, or both, whose avowed purpose is to maintain prices of naval stores, and that in some instances these organizations resort to artificial measures to keep up the market. They make no secret of the fact that they are organized to keep prices at a high level, and this they seem to be doing with signal success.

A RECEIPT FOR LUMINOUS PAINT.

A base for the preparation of luminous paint is made by calcining oyster shells at a red heat and then grinding them very fine and mixing the powder with half its weight of flowers of sulphur. Put this mixture into a closed crucible and maintain at a red heat for an hour; then allow to cool. The product should be white. It is then ground fine and sifted. This is made into a paint with gum water for a water paint or a thin colorless oil varnish for an oil paint.

DISPLAYING BRUSHES FOR SALE.

It is a good plan for the paint dealer to save his barrel tops and hoops. Bind a hoop with red cloth or other suitable material, and place small screws, hooks or nails on the inside of the hoop. Adjust a small eye or hook in the end of each brush, and fasten the whole with hanger to the ceiling or window, just as you would hang a picture. This method of display may be utilized for all classes of brushes. Barrel covers may be used to good advantage by tacking or glueing them together, covering them with some colored material, and fastening brushes with tape, elastic or wire on both sides, and hanging the whole from the ceiling or window.

PAINT AND OIL MARKETS

QUEBEC.

Office of HARDWARE AND METAL,
232 McGill Street,
Montreal, December 1, 1905.

BUSINESS for the season is now practically closed, although quite a number of sorting orders are still in hand.

Turpentine has declined in the south, and the local market is easier to the extent of 2 cents per gallon. The situation is somewhat uncertain and it would be no surprise to see a further decline next week.

Linseed oil has been quite steady, with a firm tendency As usual, at the close of navigation, dealers are marking prices up one cent per gallon.

The advances in ground white lead have been well maintained, and the demand is still heavy. Many inquiries are coming in for prices on next year's delivery, but manufacturers are, for the most part, refraining from quoting in view of certain advances in raw material at primary markets.

Other lines are in the usual demand for this season.

Turpentine—As predicted in Hardware and Metal some time ago, the high water mark for turpentine was reached at 98 cents. During the past week prices have declined 2 cents and the market at present is unsteady. We quote: Single barrel, 96c. per gallon. Two barrels or over, 95c. For smaller quantities than gallons, 5c. extra per barrel is charged. Standard gallon is 8.40 lbs. f.o.b. point of shipment, net 30 days.

Linseed Oil — Conditions are steady and the usual advance of one cent per gallon has been made in view of the close of navigation. Our prices are: Raw, one to four barrels, 46c.; five to nine barrels, 45c.; boiled, one to four barrels, 49c.; five to nine barrels, 48c., f.o.b. Montreal. Net 30 days.

Ground White Lead—The situation is such that manufacturers are shy of taking contracts for delivery next year, owing to the impression that prices will, by that time, be advanced. We are still quoting: Best brands Government standards, $5.65 to $5.80; No. 1, $5.40 to $5.55; No. 2, $5.05 to $5.30; No. 3, $4.80 to $5.05; all f.o.b. Montreal.

Dry White Lead—A decidedly upward tendency is manifest. We quote: Barrels $5.40; 100 lb. packages, $5.65; 6 to 10 lb. tins, $6.65.

Dry White Zinc—Firmness is characteristic of the market and is due to strength in the primary markets. Our quotations are as follows: Pure dry in casks, 7 1-2c.; in 100 lb. kegs, 8c.; No. 1 zinc in casks, 6 1-2c.; in 100 lb. kegs, 7c.

White Zinc (ground in oil)—We quote: 25-lb. irons, 8c. to 10 1-2c.; No. 1, 6 3-4c.; No. 2, 5 3-4c.

Putty—Our quotations are: Pure linseed oil, $1.75 to $1.85; bulk in barre's, $1.50; in 25-lb. irons, $1.80; in tins, $1.90; bladdered putty in barrels, $1.75.

Orange Mineral—Our prices are as follows: Casks, 7 1-4c.; 100 lb. kegs, 7 1-2c.; smaller quantities, 8 1-2c.

Red Lead—Great strength is shown in European markets, which gives firmness to the following prices: Genuine red lead in casks, $4.50; in 100-lb. kegs, $4.75; in less quantities at the rate of $5.75 per 100 lbs.; No. 1 red lead, casks, $4.25; kegs, $4.75; and smaller quantities, $5.50.

Gum Shellac — We still quote: Fine orange, 55c. per lb.; med. orange, 50c. per lb.; bleached shellac (white), 60c. per lb.

Shellac Varnish — Our prices are: $2.50 to $2.60; pure orange, $2.40 to $2.50; No. 1 orange, $2.35 to $2.45.

Mixed Paints—Prices range from $1.20 to $1.40 per gallon.

Castor Oil—There is no change in the situation this week. Prices are from 7 1-2c. to 8 1-2c., according to lot.

Refined Petroleum—The demand locally continues very good and prices are unchanged. We quote as follows: American water white, 16 1-2c. and 17 1-2c.; Canadian prime white, 14 1-2c. and 15 1-2c.; 18 1-2c. and 19 1-2c. ex warehouse.

Window Glass—Until navigation reopens in the Spring there will be little news to report in this market. Our prices are as follows: First break, 50 ft., $2.10; second break, $2.20; first break, 100 feet, $4.25; third break, 100 feet, $4.75; fourth break, 100 feet, $5; fifth break, 100 feet, $5.25; sixth break, 100 feet, $5.75; seventh break, 100 feet, $6.25; eighth break, 100 feet, $6.50. Diamond star, first break, 50 feet, $2.30; second break, 50 feet, $2.50; first break, 100 feet, $4.40; second do., $4.80; third do., $5.75; fourth do., $6.50; fifth do., $7.50; sixth do., $8, and seventh do., $9. Double thick, first break, 50 feet, $3.45; second break, $3.75; first break, 100 feet, $6.75; second do., $7.25; third do., $8.75; fourth do., $10; fifth do., $11.50; sixth do., $12.50; seventh do., $14; eighth do., $16.50; ninth do., $18; tenth do., $20; eleventh do., $24.00, and twelfth do., $28.50.

It ought to be always "No trouble to show goods," and you have a show window.

TO THE VARNISH BUYER

the most serious considerations are quality, reliability and uniformity, and these qualifications are of special importance to the dealer who is trying to build up a permanent varnish trade.

Berry Brothers' label or brand may be safely relied upon as ensuring the above conditions.

Our varnishes are the safest goods to handle and the surest and most reliable goods to use.

EXTRACT from the

FARMERS' ADVOCATE

"THE CANADA PAINT COMPANY. — The question of what paint to use is one of very great importance to the farmer. It isn't a matter of the original cost, because the paint that costs the least on the start is often the most expensive in the long run. Where the possibility of making mistakes is so evident, it is wise to buy the product of a well-known and thoroughly reliable concern, and we would refer our readers to the manufactures of the Canada Paint Company, of Montreal and Toronto. This company has been before the public for a great many years, and has proved in that time that its paints, colors and varnishes are absolutely good and dependable. You will make no mistake when you buy paints that come from the Canada Paint Company. Ask for their paints from your dealer, and, if he isn't handling them, write to the firm at Montreal, and they will advise you how to get them. On no account allow any substitutes to be forced upon you."

ONTARIO.

Office of HARDWARE AND METAL,
10 Front Street East,
Toronto December, 1, 1905.

SOUTHERN turpentine and rosin markets have been broken during the past week and accumulated stock gathered during the contest between conflicting interests in Jacksonville, Sav., have resulted in much lower prices being quoted for the two articles named. No cheap stock has been received on the local market as yet, but prices have fallen, some dealers quoting as low as 95c., while others are selling at 97c. and 98c. Rosins have also declined considerably owing to the slump in the south, but as jobbers have bought goods at the high prices recently quoted, the cut here will not be so marked as in other markets for some time. It is unlikely that there will be a reaction and higher prices again quoted for turpentine during the slack season.

Linseed oil is quoted at the same figures, but as navigation has practically closed and there has been an advance in Montreal, prices are likely to stiffen considerably on the local market and further advances are possible later on.

Business in ready mixed paints and white lead is quite large for this season of the year. A falling off is noticed, but the expected high prices next season is causing more buying than usual at this time.

White Lead—Ex Toronto, pure white, $5.80; No. 1, $5.37 1-2; No. 2, $5.00; No. 3, $4.25; No. 4, $4.50 in packages of 25 lbs. and upwards; 1-2c. per lb. extra will be charged for 12 1-2 lb. packages; genuine dry white lead, in casks, $5.25.

Red Lead—Genuine in casks of 560 lbs., $4.75; ditto, in kegs of 100 lbs., $5.00; No. 1, in casks of 500 lbs., $4.50; ditto, in kegs of 100 lbs., $4.75.

White Zinc—Genuine V., M., in casks, $6.50; in 25 lbs., $7.50; in 12 1-2 lbs., $8.00; Lehigh, in casks, $5.50; in 25 lbs., $6.00; in 12 1-2 lbs., $6.50.

Shingle Stain—In 5-gallon lots, 57 to 90c. per gallon.

Paris White—90c. to $1.00 per 100 lbs.

Whiting—60c. to 65c. per 100 lbs.; Gilders' whiting, 75c.

Shellac Varnish — Pure orange in barrels, $2.80; white, $2.90 per barrel; No. 1 (orange), $2.25.

Linseed Oil—Our quotations are: Raw, 1 to 4 barrels, 47c. to 48c.; boiled, 50c. to 51c.; 5 to 9 barrels, raw, 46c. to 47c.; boiled, 49c. to 50c. Toronto, Hamilton, London and Guelph, net 30 days. Advance of 2c. for delivery to outside points.

Turpentine—Single barrel lots, 95c. to 98c., f.o.b., point of shipment, net 30 days. For less quantities than barrels, 5c. per gallon extra will be added, and for 5-gallon packages, 50c., and 10-gallon packages 80c. will be charged.

Glues—Broken sheet, in 200-lb. barrels, 5 to 25c. per lb.; cabinet glue, in barrels, 11 1-2 to 12c.; emery glue, in barrels, 15c.; bookbinders' ground, 11 1-2c.; finest American white, 19c.; No. 1 American white, 15c. per lb.

Putty—Ordinary, bladders in barrels, $1.65 to $1.75; pure linseed oil, $2.00 to $2.10; bulk in barrels, $1.50; pure, $1.95 to $2.00; 100-lb. kegs, 25c. extra.

Plaster Paris—New Brunswick, $2.00 per barrel.

Liquid Paints—Pure, $1.20 to $1.35 per gallon; No. 1, $1.10 per gallon.

Barn Paints—70c. to 80c.

Bridge Paints—75c. to $1.00.

Castor Oil—English, in cases, 8 1-2 to 9c. per lb., and 10c. for single tins.

Refined Petroleum—Trade is falling off as dealers have stocked up fairly heavily. We quote as follows: Canadian prime white, 14c.; water white, 16c.; American water white, 16c. to 18c. ex warehouse.

Crude Petroleum—Prices continue unchanged. We quote: Canadian, $1.36; Pennsylvania, $1.61; Ohio, 94c.

LINSEED OIL AND LOW TEMPERATURES.

TESTS were recently made to determine whether linseed oil transported at temperatures below freezing point could sustain such alterations as would cause it to become cloudy at ordinary temperature, and form a flocculent deposit when heated to 270 C. Three freezing tests were performed by placing the oil in a large test tube and immersing the latter in a freezing mixture. In fifteen minutes the oil temperature fell to 76 C., and turned cloudy, and cooled down to 17 C. within two hours, at which temperature the oil was thick, but had not lost its fluidity. On repeating the test with a freezing mixture of snow and calcium chloride, which gives a temperature as low as 63 C., the oil was found to set hard at 29 C., without exhibiting any trace of crystalline structure. The samples were left in the freezing mixtures until these ceased to act, and were then kept for three days in a warm room. Each of them was found to be perfectly clear and bright, free from any deposit or flocculent matter in suspension, and quite undistinguishable from the original sample; and no flocculence was obtained on heating them to 270 C. It therefore seems evident that cold has no unfavorable influence on linseed oil.

Buyers of screws need not be alarmed by the reports current regarding the formation of trusts and combines in the screw-manufacturing business. The time has long gone by when owners of screw-cutting lathes enjoyed a monopoly, and when English and foreign screw-makers could combine to force higher prices from the buyer. There are independent firms in the screw-manufacturing industry who will act as a check upon any attempt to obtain exorbitant rates on the part of the reported combination of English and German screw-producing companies. Their existence can be readily made known, and much of the business now in the hands of the "combine" may ere long be diverted to equally competent and less exacting concerns.—British Trade Journal.

BRUSHES

SPRING, 1906

Trade Bulletin

Owing to our having been fortunate in making some very large and favorable contracts on Bristles and other raw material, we have been able to reduce our prices on many lines of **"Boeckh's"** and **"Bryan's" Paint Brushes** handled by the General Trade, and by the introduction of new machinery it has been possible to also make reductions on many lines of Household Brushes, and we are now revising our prices and preparing our 1906 illustrated catalogue, which will be ready for distribution about Dec. 1st. We therefore wish to impress upon you the importance of first seeing our samples and getting our prices before ordering for your Spring requirements, as we feel confident that you will find our values much better than those of any other manufacturer.

Our representative will call on you in due course with a complete line of samples, when you can see exactly what we have to offer. We trust you will be in readiness to order by the time he calls, and would specially mention that it is decidedly advantageous to place orders for Spring requirements as early as possible, as by doing this the Brushes are sure to be delivered before the rush season begins, you protect yourself against any advance in prices which may be necessitated through the possible and probable advance in bristles, etc., when the large Spring demand is on, and also you get the benefit of being able to display your goods well in advance, without any extra cost to you, as we always give a liberal dating on stock orders for Spring trade.

Trusting that we may be favored with your orders, we remain,

Yours truly,

INDUSTRIAL GOSSIP

HARDWARE AND METAL would be pleased to receive from any authoritative source industrial news of any sort, the formation or incorporation of companies, establishment or enlargement of mills, factories, foundries or other works, railway or mining news. All correspondence will be treated as confidential when desired.

WINNIPEG financiers are preparing to erect a pipe and tile factory at Medicine Hat and a company known as the Great West Sewer Pipe & Tile Co. is being promoted at a capitalization of $1,000,000.

The Canada Cordage Co. are to locate their factory at Glencoe.

A branch factory of the London Fence & Machine Co. may be established at Brandon.

The Brantford Felt & Rubber Company has purchased considerable new machinery.

Another lime burning plant is to be established in Owen Sound by David Chalmers.

A by-law to grant $20,000 to the Aylmer Iron Works was carried at Aylmer, Ont., this week.

The Canadian Electric Force Company is being organized at Victoria, B.C. A. Maxwell Muir is secretary.

Natural gas is expected to be ready for sale at Brantford, St. George and Galt during the next week or two.

Haslem's saw mill at Nanaimo is to be operated again, having been purchased by J. S. Emerson, Vancouver.

The R. Watt Machine Works, Ridgetown, are to manufacture the Bidwell Threshing Machine.

Thomas Shafer and H. J. Mills, of Philadelphia, propose to establish a boot and shoe factory at New Westminster.

The Canadian Northern Railway has been constructed as far west as Edmonton, this being the first railroad to enter the new capital of Alberta.

John Studebaker, the great wagon manufacturer of the United States, is looking into the possibilities of opening a branch factory at Fort William.

St. Catharines is to have a new industry, the manufacture of scientific products having been commenced by the St. Catharines Building & Paving Co.

The strike at the Kingston Locomotive Works, which has been on for nearly four years, has been called off by the International Association of Machinists.

The brick work on the foundry extension at the Peterboro Lock Works has been completed. As soon as the works close down for stock taking the new machinery will be put in.

A New Brunswick foundry, Fredericton, are manufacturing the attachments for looms to be used in textile mills, they having secured the right to manufacture this machinery in Canada.

The rail mill of the Dominion Steel Co. at Sydney has been out of operation for about a week on account of an accident to the main engine of the plant. The mill has been turning out an average production of five tons per day.

The people of Kingston will vote on a by-law in January to exempt the Canadian Locomotive Works from taxes for ten years. If the by-law carries the company agree to enlarge their works. The capacity now is sixty engines per year.

The Home Telephone Co. is negotiating with the city of Vancouver for the installation of a new automatic telephone system in that city. The company is installing a $1,000,000 plant in Portland and state that they are prepared to spend $1,000,000 in Vancouver if a satisfactory agreement can be arrived at.

The annual meeting of the Rand Drill Company was held at Sherbrooke a week ago. The financial statement as submitted to the shareholders showed a remarkably good record of expansion during the past year, and it was decided to proceed at once with the enlargement of the plant at Sherbrooke, Que.

The United States Steel Corporation have announced that about 2,500 acres of land in Indiana on the shore of Lake Michigan has been purchased in the interest of the United States Steel Corporation, which will erect thereon blast furnaces, open hearth furnaces, by-product coke ovens and various mills for the manufacture of a diversity of steel products.

A plant is to be established near Tweed to utilize the silver ores of Hastings County and to extract sulphuric acid by the context. The Canadian Chemical Co. will invest $1,500,000 in the plant and the enterprise will greatly stimulate the mining interests of New Ontario and will make possible the working of large bodies of ore not yet developed.

The Canadian Northern Railway Company has ordered forty new locomotives, which may be increased to sixty, four hundred flat cars, one thousand box and stock cars and several hundred passenger cars. This new equipment is for delivery during 1906 and if Canadian firms can meet the company's demands the orders may all be increased. An expenditure on equipment exceeding $2,000,000 is anticipated.

The Canadian Northern Railway has secured $6,000,000 in England, and it is understood that the company will early next Summer begin the construction of their transcontinental line between Port Arthur and Montreal, and that within three years Montreal will be connected with the Saskatchewan River by three distinct railway systems. It is understood that the new line will be built between the C.P.R. and the Grand Trunk Pacific.

A petition in bankruptcy has been filed against the Colonial Copper Company, which owns copper mines in Nova Scotia and other parts of Canada. Mismanagement on the part of the company's officers is alleged by the creditors filing the petition, who have claims amounting in all to $6,550. The Colonial Copper Company is capitalized at $5,000,000, and an authorized bonded indebtedness of $300,000, of which $115,000 has been issued.

Companies Incorporated.

The license to do business in the province of Ontario by the Buffalo Tool & Machine Co. has been revoked.

The Mount Forest Carriage Co. have been granted permission to increase their capital stock from $50,000 to $100,000.

The Plymouth Cordage Co., of the State of Massachusetts, has been authorized to manufacture cordage in Ontario, provided they do not use any larger amount of capital than the sum of $80,000.

Window Glass Machine Co. of Canada, Cayuga, share capital $40,000, purpose to manufacture and sell glassware. The directors are: M. McClung, M. McConnell, J. W. Sheppard, D. P. Foster, and A. K. Goodman, all of Cayuga.

West, Taylor, Bickle & Co., Toronto, share capital $20,000; purpose, to manufacture and sell and deal in brooms, baskets, mops, matches, wash boards, etc. The directors are G. West, E. J. Taylor, W. J. Bickle, J. W. Berney and S. Smith, all of Toronto.

Temiskaming Reduction Works, Cobalt, share capital $166,000, purpose to carry on the business of a mining, milling, reduction and development company. Directors to be: Peter Kirkegaard, of Delora, and C. L. Benedict and G. Ritchie, of Toronto.

The Silver Five Mining Co., New Liskeard, share capital $40,000, purpose to carry on the business of a mining, milling, reduction and development company. Directors are: J. Matthews, W. McKnight, D. Stewart, W. Roebuck and H. Loudin, all of New Liskeard.

The Standard Tin Works, Toronto, share capital $40,000, purpose to buy, sell, manufacture and otherwise work and deal in tin, iron, copper, brass and other metals. The directors are to be: T. H. Cook and R. MacKenzie, of Sarnia, and J. A. McGolpin, W. F. Boddy and H. F. Bodd of Toronto.

Canada Turpentine Co., Ottawa, share capital to be $200,000; purpose, to manufacture, sell, renne and deal in turpentine, wood alcohol, acetic acid, creosote, etc. The directors are R. A. Sibbitt, A. K. McLaren, A. McKillop, and F. X. Laderoute, all of Ottawa, and J. A. Thompson of Winnipeg.

The Anglo-American Varnish Co., Montreal, share capital $20,000; purpose, to manufacture, buy, sell, and deal in varnishes, Japan lacquers, driers, oils, etc. The incorporaters are W. Marshall, G. M. Ballard, T. F. Clarknall, of Newark, N.J.; and P. Davidson and A. Wainwright, Montreal.

Temagami Mining & Milling Co., Toronto, share capital $40,000, purpose to carry on the business of a mining, milling, reduction, smelting and development company. Directors to be C. L. Beckwith, L. O. Hedden, W. E. Thatcher, J. B. Wilson, F. L. Luff and E. J. Meeker, all of East Orange, N.J., and R. N. Brundage and F. F. Guild, of Newark, N.J.

The Cambrian Mineral Co., Sudbury, share capital $100,000; purpose, to carry on the business of mining, milling, smelting, refining, or otherwise dealing with metal, minerals, coal oil, or any other substance connected with same. The incorporators are R. G. Leckie, J. E. Leckie, W. J. Montgomery, all of Sudbury, and R. G. Edwards of London, England, and D. G. Gillies of Montreal.

No. 31. OSHAWA, ONT. Dec. 2, 1905

WHAT WE HAVE DONE

Mr. Hardwareman, you know that we have placed on the market a **Fireproof Partition Stud** and a **Sheet Steel Furring Strip**. Do you realize the part that these manufactures are going to play in modern buildings? The fact that they have been taken up so quickly by men interested in securing substantial structures is the best proof that the Studding and Furring fill a long-felt want.

Then there is our **Perfect Metal Lath** which can be used in conjunction with the **Fireproof Partition Stud** and the **Sheet Steel Furring Strip** to splendid advantage. **Perfect Metal Lath** is the cheapest metal lath on the market, **and the only metal lath that is "perfect."**

WHAT YOU SHOULD DO

Don't you think there is room for you to sell these goods? Don't you think it will pay you to drop us a line for full particulars? We can show you How and Where sales are made. We can also give reasons why you should carry a stock of our "Steel Ceiling," "Wall Covering," "Metal Shingles," "Tile," "Siding," "Cornices," "Store Fronts," "Ornamental Zinc" and "Copper Work," "Eavetrough," and "Conductor Pipe," etc.

There is no time like the present. WRITE NOW.

Hardware Store Business Methods

Compiled and Edited by R. R. WILLIAMS, Hardware Editor of the IRON AGE.

The thorough and practical treatment of the important subjects discussed, the embodiment in these articles of the experience of men of ability and enterprise, the suggestiveness of the principles and maxims thus presented, will, it is hoped, render the volume useful to many and tend to elevate still further the business methods of the hardware trade.

Cloth bound, Price, postpaid $1 00

The American Hardware Store

A Manual of Approved Methods of Arranging and Displaying Hardware.

By R. R. WILLIAMS, Hardware Editor of the IRON AGE.

This book is descriptive of the best methods of accommodating and displaying the large variety of goods which are carried in stock in representative American and Canadian hardware stores. Copiously illustrated, and worth many times its cost to every progressive hardware dealer.

Cloth bound, 6¾ x 9¼. 576 pages. Price, postpaid. $3.00

Business Changes

Ontario.

Wm. Gallaugher, agricultural implements, Shelburne, has assigned to Thos. McKim, Shelburne, and there was a meeting of creditors on Nov 29th.

The stock of Coxall & Co., grocers and hardware merchants, Colborne, has been sold.

The assets of John W. Oldfin, plumber, Kingston, are to be sold.

Hamilton Facing Mill Co., Hamilton, were partially burned out, but were insured.

The assets of D. Belleau, plumber, Ottawa, were sold

Quebec.

The assets of L. C. Giguere, hardware merchant, Quebec, are to be sold.

British Columbia.

Thompson & Peace, blacksmiths, Grand Forks, have dissolved.

Nova Scotia.

The A. C. Thompson Co., hardware and foundry, North Sydney, lost by fire at Lunenburg.

Western Canada.

H. L. Gryte, agricultural implements, Elm Creek, has been succeeded by R. J. Wilson.

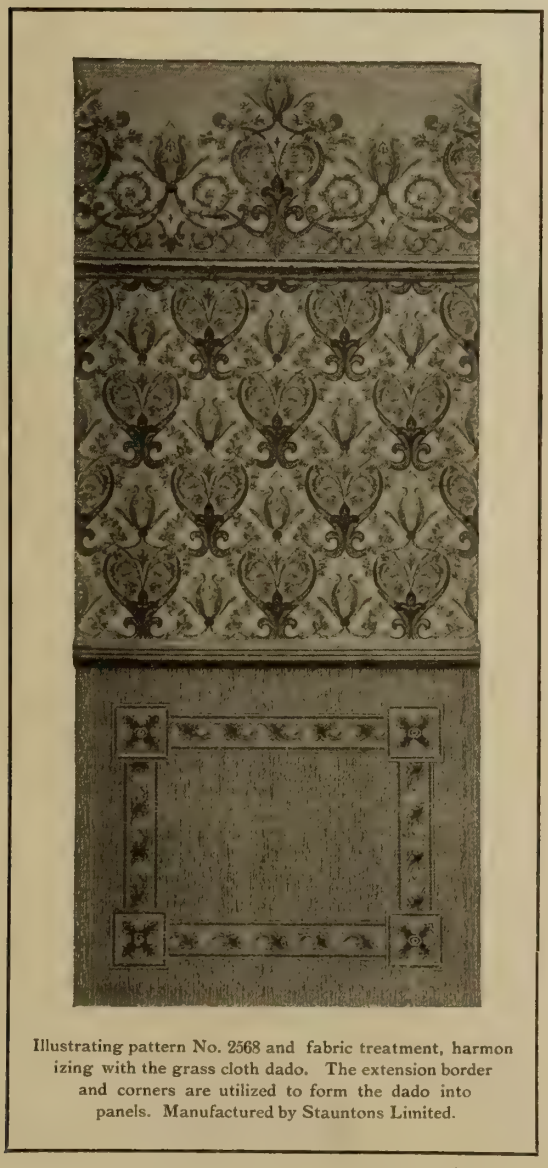
TREE BRAND SCISSORS.

An oak cabinet, having five illustrations of Tree Brand Scissors, is given away with an order for one-half dozen of each line illustrated, that is, one embroidery, one bent nail, one 4½-inch pocket, one 5 and one 6-inch regular scissors, all finest finished and fully nickeled with bevelled bows, and very best quality. The goods fit exactly over the illustrations so that the salesman cannot put the scissors in the wrong place. The cabinet will help to increase the scissor trade. It may be had through any leading wholesale hardware firm.

HOW TO FILE SAWS.

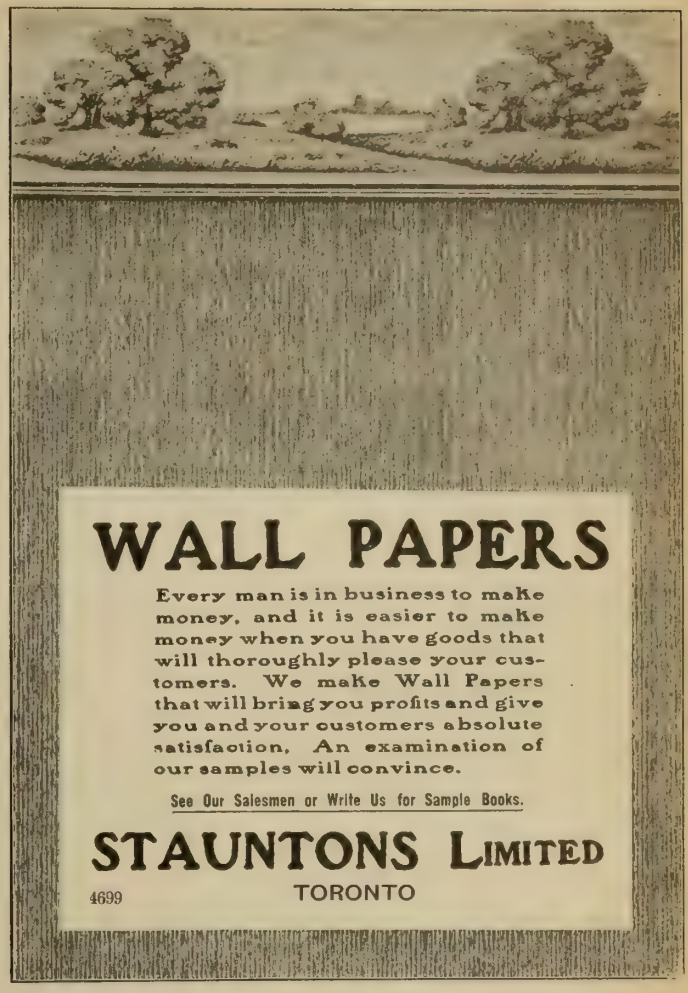
A comparatively new method for filing saws is to take a cut-off saw, No. 6 or 7, and file it square across with the file level. Then start on the back corner of the tooth one-third or one-half way down and file it to a point on the set side. This gives it a bevel point but leaves the face square. Rip saws may be filed in the same way, only a little more time is required. This method is said to be superior and very effective if the timber to be cut is curly or knotty.

Work will be commenced next Spring on the new cement plant to be established at Belleville by the Lehigh Portland Cement Co. The plant will have a capacity of 4,000 barrels a day.



WALL PAPER

PROSPECTS BRIGHT FOR WALL PAPER.



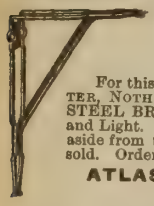
WALL paper mills are working to their full capacity to get out their orders for Spring delivery. The season has proved better than was expected even by the most optimistic manufacturer. Orders have been uniformly heavy, and as the samples show there should be an attractive season ahead for the retail merchant.

A noticeable feature of the orders which are now coming in is the large number of drygoodsmen who are seeing the advantage of handling this profitable line. It has become recognized as an integral part of the house-furnishing stock, and a progressive merchant cannot afford to neglect it.

Development and expansion are the watchwords of the present time. From the biggest departmental store in the great cities to the small store in the country village, the one idea running through all is to carry as many lines as can be handled economically.

Illustrating pattern No. 2568 and fabric treatment, harmonizing with the grass cloth dado. The extension border and corners are utilized to form the dado into panels. Manufactured by Stauntons Limited.

Carpets have always been recognized as belonging primarily to the dry goods store. They are practically the same material as the other lines in the store. So, too, curtains are distinctly a part of the dry goods stock. But you cannot separate two parts of the house-furnishing department. Wall paper must go with carpets and curtains, and hence it must be included in the dry goods store.



Make your preparations now by seeing samples and ordering a line of wall papers. The advantages of handling this stock are many. Its immediate benefits consist in a good profit and a quick turnover. If the stock is judiciously bought there will be very little left on the shelves when the season is over. The time when much space or attention has to be devoted to it is short, and the regular selling staff can handle it. There is nothing intricate or technical to require the care of an expert. An eye for artistic effects is enough, and it is always possible to find a person with this in a dry goods store, where the harmony of colors must be constantly considered.

In addition to this, every new department brings people into the store who might not be attracted by anything else. All of these are possible buyers for general dry goods, and by bringing them into contact with the goods sales should follow. It is an important thing to induce the buying public to come into the store. The attractions inside should do the rest.

For all of these reasons we strongly recommend drygoodsmen to take up this line of business. It will add perceptibly to the gross sales and to the net profits. It is worthy of close consideration.

BUILDING AND CONSTRUCTION

GROWTH OF THE SKYSCRAPERS.

THERE is a growing wonder on the part of many people about when the limit will be reached in the height of buildings, and what the limits of the possibilities of the architects and builders.

Considerable discussion has been brought about by the startling announcement that the Metropolitan Life Association proposes to erect an office building in New York that will top the Washington Monument in the nation's capital. It is said that the plan suggested is to make the building 560 feet high. Of course there is much objection to this on the part of the lovers of beauty, yet it is still to be demonstrated that such a structure would be devoid of beauty.

Broadway, as a result of the skyscrapers, has become known as the "Grand Canyon of New York," not because of its beauty, but because of the great heights to which the buildings rise on either side.

Leaving out of the question the architectural beauty the fact remains that the skycrapers have been found to be of great utility because of their accessibility, as well as the fact that they make possible the concentration of business in which the saving of a few minutes, in these strenuous days, means dollars. The natural result is that they are profitable investments, and there is a stronger disposition on the part of property owners to increase the accommodations per building by increased height, rather than toward a reduction or any particular interest in the aesthetic side of the question.

BUILDING IN MONTREAL.

Building operations in Montreal are still going on with marked activity, and, as the supply of all kinds of rentable space is short of the demand it is apparent that this activity is likely to continue.

Real estate sales during October amounted to $1,023,331 in the city proper and $345,243 in the surrounding municipalities, which would seem to bear out the prediction that the building trade have still lots of work in sight.

During the month of October, 1904, real estate sales in Montreal showed a total value of $676,268, so that the present year is a decided advance. Moreover, the building operations for the past ten months of 1905, exceed those of the corresponding period in 1904, by about 50 per cent.

BUILDING NOTES.

A new Methodist church is to be erected at Elgin, N.B.

A $4,000 rink will be built at Q'Appelle this Winter.

An eight-storey apartment house is to be erected in Ottawa.

A new Grand Trunk depot is to be erected at Kincardine.

A. E. Short is erecting a $12,000 business block at Vancouver.

The Dominion Natural Gas Co., Brantford, are erecting a new building.

A new Y.M.C.A. building to cost $60,000 is to be erected in Winnipeg next Spring.

Operations have been commenced on the extension of the C.P.R. freight sheds at Regina.

John Drummer, Toronto, has taken out permits to erect eleven houses in Toronto Junction.

Wm. Speers has plans out for a business block at Toronto Junction to cost about $6,000.

Permits have been issued in Toronto for the erection of twenty-eight buildings to cost $88,400.

The American-Abell Engine & Thresher Co. are to build a large addition to their warehouse at Regina.

The contract for the erection of a three-storey building for W. J. Pendray & Sons, Victoria, B.C., has been let.

New houses are being built in St. Catharines by S. E. Bosworth, G. Burch, E. C. Nicholson, and Mrs. E. A. Wilson.

The Plymouth Cordage Co. propose to erect nine houses at Welland to cost $6,000 each, according to a Welland paper.

Regina Methodists have secured a site on which next Spring they will commence the erection of a $50,000 up-to-date edifice.

S. J. Thompson, photographer, Vancouver, has purchased a site on Granville street, and will erect a three-storey building.

The Cornwall Furniture Co., Cornwall, Ont, have almost completed the new brick addition to their already well equipped factory.

A Montreal fur manufacturing company are to erect a three-storey building at Brandon. Over 60 employes will be given work when the building is completed.

The Keystone Sugar Co., Whitby, have let the contract for the erection of their new factory to a Michigan construction company, the price being about $15,000. The structural steel used in the deserted factory at Wiarton, and the machinery of the same plant will be transferred to Whitby. The work is to be completed next August.

WE WANT YOU TO KNOW WHY

DOMINION BRAND
TARRED FELT

our Tarred Felt, Roofing Pitch and Coal Tar will give you better satisfaction than any other you can handle. We can't tell you all about it here, but, if you will write us, our traveller will call on you and convince you.

"Dominion Brand" Roofing Materials

Are made only by us

LOCKERBY & McCOMB, 65 Shannon St., Montreal

THERE IS NO FEATURE

In the sale of an article that inspires the dealer to recommend, and induces the customer to buy, equal to the merit of the article itself. As one knows a true friend from long acquaintance and association, so it is that stock in trade that has stood the test of time is recognized as something safe to invest in.

CHURCH'S

ALABASTINE

Is a **PERMANENT** and **SANITARY WALL-COATING**, that **hardens with age**. Has been on the Canadian market and made in Canada for more than twenty years. Is extensively sold and persistently advertised. Sells without effort and affords a good margin of profit. The country is full of cheap kalsomines, foreign-made; but what does it profit a dealer to sell them and lose his reputation for dealing in only first-class articles?

ALABASTINE is **NOT A KALSOMINE**. We make **JELLSTONE, which is a Kalsomine,** and in point of merit as such has no competitor. If you **must have a temporary coating**, stock **JELLSTONE** which is Canadian-made goods. **ALABASTINE** satisfies the customer, and a satisfied customer is a splendid advertiser. **PUSH ALABASTINE.**

Look up your **ALABASTINE** stock. Do it this fall. Order now, from jobber or manufacturer. Spring dating.

THE ALABASTINE CO., Limited, - - Paris, Ont.

There's No Denying They're The Best

Whether you have written for Catalogue No. 7 or not, you must have been convinced by this time that

Gurney Cylinder Locks

afford a Hardwareman more profit and builders more lock value than any other cylinder locks you can think of.

And if you are convinced, why not act? If you believe the GURNEY-TILDEN guarantee is *something*, the GURNEY-TILDEN quality *something*—why not enjoy the advantages accruing? To see opportunity is good, to *seize* it—better. Delay no longer but get a copy of Catalogue No. 7. In it will be found full details concerning *Gurney Cylinder Locks*, and also numerous designs in artistic trimmings.

PLUMBING AND STEAMFITTING

THE PLUMBING OF A COTTAGE.

UNDER the above heading Mr. J. A. Cardiff, architect, has commenced a series of articles in the National Builder, Chicago, the writer stating he proposes to illustrate modern plumbing in all its branches as applied

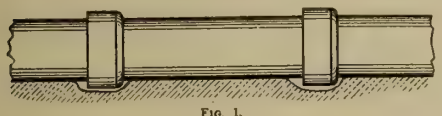

FIG. 1.

to cottages. By modern plumbing is meant all those sanitary improvemnets that have been made within the last few years, raising the standard of plumbing to its present state of excellency. Mr. Cardiff writes :

The bathroom that only a short while ago was looked upon as a necessary evil is to-day one of the foremost features of the modern home and one of which every progressive housekeeper is justly proud. It is well lighted; the walls and floors are tiled; the old foul-smelling, disease-breeding, boxed-in fixtures have been supplanted by "open plumbing" with modern fixtures that are the acme of sanitary perfection; and all exposed piping and fittings are nickel-plated. These improvements, with such appointments as nickel-plated soap dishes, towel racks, tooth brush holders, etc., have all combined to make the modern bathroom a "thing of beauty and a joy forever."

Equally important improvements have been made in the drainage and ventilating systems and the sizes and weights of pipes have, after careful study and much experimenting, been properly proportioned and definite rules and principles now take the place of guesswork.

The drainage system is so sealed and ventilated that it is impossible for sewer gas, with disastrous effects, to enter.

The water supply has also been greatly improved, reducing to a minimum the chances of disease from this source.

In presenting the subject, the first point we shall consider will be the house sewer, then the main trap and fresh air inlet, the house drain, and so on in the

FIG. 2.

order which the work is installed, until the entire system has been completed.

The House Sewer.

The term "house sewer" is applied to that part of the drainage system extending from a point about five feet outside of the outer wall of the building to its connection with the street sewer or other means of disposal.

When a foundation, consisting of a natural bed of earth or rock, can be obtained, the house sewer may be of salt-glazed earthenware pipe.

When the ground is made or filled in, or in any case where there is danger of settlement by frost or from any cause, and where a cesspool is used as a means of disposal, the house sewer should be of cast iron pipe of the grade known as "extra heavy."

When earthenware pipe is used it should be well burned, straight and cylindrical, and should be salt-glazed both inside and outside except that portion of spigot end and inside of hub to which the cement is applied. Common unglazed terra cotta pipe should never be used.

One of the best methods of laying earthenware pipe is to dig the trench so that the bottom will have the proper slope to the main sewer. The bottom should then be tamped down solid, and wherever a hub occurs, the earth should be hollowed out for it so that each length of pipe will have a solid bearing at every point, as shown in Fig. 1.

Unless the pipe has a solid foundation an uneven settlement is likely to occur. This forms a pocket as shown in Fig. 2,

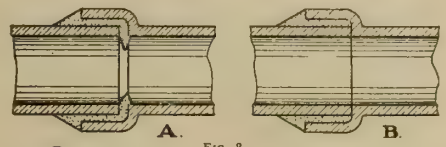

FIG. 3.

and usually breaks the cement joint, allowing the sewage to escape and sometimes leaving an opening through which the earth may enter, thus obstructing the flow, if not entirely stopping it, Even though the joint does not open up, the pocket forms a lodging place for water and solid matter, which retards the flow and in time causes stoppage.

In cementing the joints, only the best portland cement should be used, mixed half cement and half clean, sharp sand. Care should be taken that the spigot end fits well into the hub of the adjoining piece so that the cement will not protrude into the pipe as shown at "A" in Fig. 3. As an additional precaution, each joint, as soon as it is made, should be wiped on the inside so as to insure a smooth inner surface as at "B." If the cement was allowed to protrude, it would soon collect enough hair, lint and other matter, to entirely close the opening.

A better joint may be formed by first caulking the hub with oakum and then cementing. This joint prevents the cement from protruding in the pipe, and, as there is a tendency on the part of the mechanic to neglect wiping the joint on the inside, it is preferable, for this reason also, to use oakum and cement joint.

There are, of course, many ways in which the objections to the use of earthenware pipe may be overcome, but

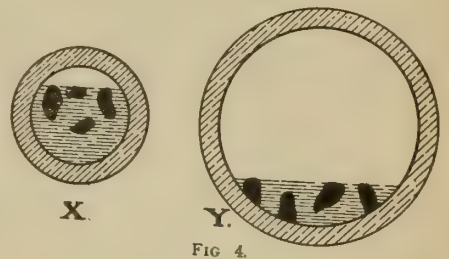

FIG 4.

they so increase the cost that it is advisable to use cast iron pipe, which, for many reasons, is preferred.

In filling in the trench, the earth should be carefully packed around the pipe and every foot in depth should be well tamped.

When cast iron pipe is used, it should be pitch-coated both inside and outside, sound, cylindrical and smooth, free from cracks, sand holes and other defects, of uniform thickness, and of the grade known as "extra heavy." The use of standard pipe, although permitted by the plumbing laws of many cities, should be discouraged,

The weights of standard and extra heavy cast iron pipe per lineal foot are as follows :

Diameter	Standard.	Extra Heavy
3 inches.....	4½ pounds	9½ pounds
4 inches.....	6½ pounds	13 pounds
5 inches.....	8½ pounds	17 pounds
6 inches.....	10½ pounds	20 pounds

The joints should be made with picked oakum and molten lead and hand-caulked gas-tight. Twelve ounces of lead should be used at each joint for each inch in the diameter of pipe. Another joint occasionally used is made by caulking with picked oakum and filling with "Smooth-on" or a rust compound. This joint, however, has no particular advantage over the preceding one for cottage work. The lead-caulked joint in-

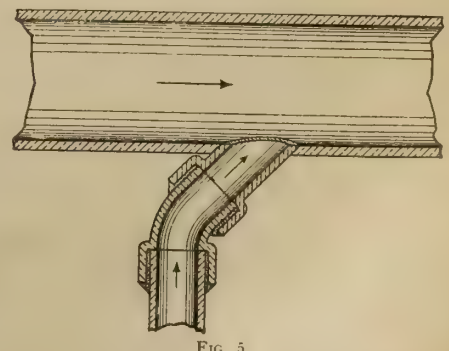

FIG. 5

sures a perfectly tight connection and is not easily broken by uneven settlement.

Drains should have a straight and

uniform fall throughout so as to give the water a velocity sufficient to carry along the solids that accompany the water. A fall of one-half inch to the foot will accomplish this result, but a greater inclination should be given where possible.

The pipe should be large enough to readily carry off the largest amount of water that will enter it at any one time; yet must not be so large that the ordinary flow of the water will be too shallow to float and carry along the solids. Fig. 4 at "X," illustrates the proper flow of water through a four-inch pipe and at "Y," shows the result of using an eight-inch pipe for the same amount of water. In the first case, the solids float and move along as rapidly as the water; while in the latter case, the solids rub against and cling to the inner surface of the pipe, thereby retarding the flow.

A drain four inches in diameter is usually sufficient for an ordinary dwelling unless the rain leaders empty into it, in which case it should be five inches or six inches in diameter, according to the size of the house.

The house sewer should enter the street sewer at an angle of 45 degrees through an eighth bend, so that the

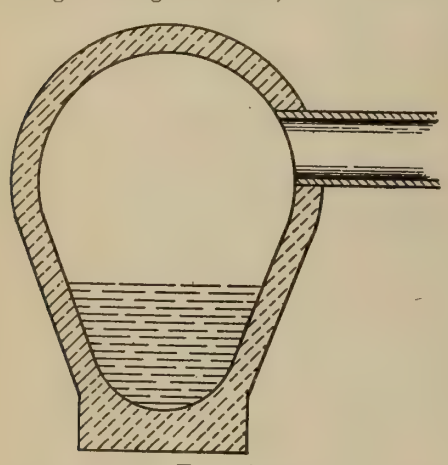

FIG. 6.

sewage from the house enters in the same direction as the flow in the street sewer. See Fig. 5.

The arrows indicate the direction of the flow. A Y branch is usually provided on the street sewer for the connection with each house sewer.

When the street sewer is constructed of brick, the house sewer should enter it at a point just above the centre of the arch as shown in Fig. 6.

HUMIDITY OF AIR.

In a recent investigation, it was discovered that while the normal humidity of outside Winter air is about seventy-two per cent, the average relative humidity of the air in a house heated by steam and hot water with an average temperature of seventy-two degrees, was twenty-eight per cent. The humidity of the same air after being heated by a hot air furnace, was twenty-four per cent. From these observations it is safe to assume that the average relative humidity of dwellings and offices during the portion of the year that requires artificial heating, is about thirty per cent or perhaps forty-two per cent. less than the average outside humidity —dryer than the dryest climate known.

MORE SENSATIONS IN PLUMBERS' TRIAL.

ANOTHER eventful week has passed in the "combine" investigations, the chief features being the wholesale issuance of summonses calling upon practically every master plumber and supply man in Toronto to appear in the Police Court on Friday, December 1; the extension of the case by the seizure of the books and commencement of the prosecution of the members of the Hamilton association, and the practical calling off of the investigations into the existence of other trade "combines."

* * *

It is common talk on the street that the plumbers are to be made the scapegoats of the cases against the various trade associations, public sentiment against combines being strong enough to demand the sacrifice of some heads. Rumor has it that Crown Attorney Curry dug too deep and having unearthed an association of manufacturers having a rebate of 30 per cent., one of the prominent members of the Dominion Cabinet being interested, the Crown Attorney will now devote all his energies to punishing the plumbers, leaving the investigation of the other "combines" to a commission to be appointed later on, after the public's wrath has been appeased by the punishment of any plumbers convicted of wrong-doing.

* * *

Informations were sworn out last Saturday charging that during the years from 1902 to 1905 these defendants conspired together "to unduly limit the facilities for producing, manufacturing, supplying, and dealing in plumbers' and steamfitters' supplies, brass goods, boilers and radiators, articles and commodities which may be the subject of trade and commerce, and also that they tried to injure trade, to prevent competition, and to raise the price of such articles 'to the evil example of all others in like cases.'"

The representatives of the larger firms within and without the city against whom informations have been sworn are: Edward Gurney, F. Somerville, P. McMichael, C. E. Morrison, J. H. Paterson, A. D. McArthur, H. W. Anthes, L. L. Anthes, Toronto, A. W. Mann, Canada Brass and Supply Company, London; T. A. Stevens, Empire Manufacturing Company, London; J. M. Taylor, Taylor, Forbes & Company, Guelph; Alex. Saunders, Goderich Organ Company, Goderich; W. W. Near, Page-Hersey Company, Guelph; C. J. Brittain, Canadian Fairbanks Co., Toronto; L. Payette, Warden King & Son, Montreal; R. J. Cluff, Toronto; W. V. Shaw, Robert Mitchell & Co., Montreal; W. G. Harris, Canada Metal Co., Toronto; R. Crashley, Toronto; W. Minhinnick, Empire Manufacturing Co., London; W. C. Gurney, Gurney Foundry Co., Toronto; A. E. McArthur, Standard Ideal Sanitary Co., Port Hope.

* * *

The individual plumbers resident in Toronto summoned to appear are: W. B. Malcolm, J. T. Aggett, E. W. Aikins, G. Ashdown, W. G. Adams, B. Bryan, W. H. Benson, G. Clapperton, J. H. Berry, Nathan Blumbergh, Edward B. Bird, W. E. Boddington, John R. Bolan, E. Butler, J. R. Brown, David Clark, George H. Cooper, A. E. Cottrell, Wm. Clewes, Thomas Cook, Henry Dummond, J. Down, J. H. Erwood, A. A. Earl, James J. S. Ellacott, J. Elliott, James Furey, J. J. Graham, A. Gibson, S. J. Greer, J. Gibbs, F. Gates, J. Gray, Jas. Fiddes, Alex. Fiddes, H. Hogarth, R. G. Henderson, A. J. Hutchinson, J. M. Haydon, T. H. Hutchinson, T. E. Hoar, W. B. Inwood, P. Jessiman, E. A. Janes, H. E. Jarman, Jas. B. Fitzsimons, J. E. Knott, J. Lawrence, J. J. Lyndon, R. G. Leaman, J. T. Lendreville, E. Larter, G. E. McDonald, John E. Fullerton, James W. Fullerton, Charles Robertson, W. J. McGuire, George G. F. McGuire, Neil McMullen, Denis McMullen, Angus MacPherson, W. J. McNamara, J. Monahan, Francis R. Maxwell, Herbert Johnson, J. I. Matthews, Daniel Menzies, G. F. Mason, Edward Myers, Carl J. Hillier, W. G. Minns, Watson Mashinter, S. J. Nixon, E. T. Needham, J. W. Oran, Henry J. Pell, W. Parmenter, John J. Power, James T. Power, J. L. Pincombe, Alexander Purdy, Percy C. Mansell, E. H. Phillips, C. E. Pickard, A. F. Passmore, J. H. Parkes, R. Paterson, Henry Richards, Alfred Richards, William H. Raine, Jacob Raine, John Ross, Robert Ross, R. T. Robinson, R. W. Robinson, A. J. Richardson, E. Restall, S. Ryding, John R. Seager, George Moore, T. W. Slean, W. J. Street, Abraham H. Stinson, John Toop, Arch. Allison, C. J. Tomney, W. Telford, Geo. J. Thompson, Wm. N. McConnell, J. H. Thorn, H. Tweedy, George Wallis, E. J. Wallis, W. E. Wiles, W. Walker, G. W. Wallace, H. Warwick, M. P. Warren, A. Welsh, Joseph Westwood, E. Willett, John Wright, R. Wright, S. Wright, Walter Wraly, Daniel J. Morgan, R. M. Yeomans, A. M. Bond, James J. McKittrick, James H. Wilson, Wm. Bush, James Richards, Peter McCann, and J. W. Priestley.

* * *

Crown Attorney Washington, of Hamilton, on Tuesday seized the books of the Hamilton Master Plumbers' Association and the following were summoned to appear at the Police Court on Thursday to answer to a charge of conspiring to prevent competition and keep up prices: Adam Clark, J. F. Cummings, Robert Fitzsimmons, William Fitzsimmons, H. Harding, Herbert Jones Co., J. F. Kennedy, G. T. Myles, Henry Morley, Stephen Mellon, Andrew Rogers, W. D. Smith, J. H. Stewart, Hugh Wallace, W. J. Walsh, Isaac Walsh.

* * *

On Monday the cases before Judge Clute came up for hearing in the Assize Court. Rev. J. A. Macdonald answered to the charge of publishing a scurrilous poem attacking plumbers. "I think the lines are a prejudgment of the case," said Justice Clute. "If it were the right of the press in any criminal case to express opinions as to the guilt or innocence, nothing would interfere more with the administration of justice. I am surprised at the stand taken by Mr. Macdonald in refusing to apologize for the assertions he has made. I should have thought that the responsibility would be met by a statement that not knowing anything about its publication he regretted it and would promise that it would not be repeated. As it stands, however, I decline to inflict any punishment on this application. However, the

court demands that the press should not give any expressions of opinion during the time a trial is pending.

* * *

Evidence was given by G. W. Guest, a non-member of the association, who recited the troubles he had in securing supplies, stating that he had bought for cash several thousand dollars' worth of goods. His credit he admitted to be bad and his buying such large quantities for cash is denied by the supply houses, their cash sales never having been as large as he stated.

Mr. A. W. Mann, of London, produced, on the order of the court, originals and copies of letters he had received from and sent to plumbers not members of the combine. In every case such firms were refused goods by Mr. Mann, who frankly stated in all his letters that he refused the supplies because the would-be purchasers were not members of the Master Plumbers' Association. Other witnesses called were Secretary Morris, of the Supply Association, and Secretary Meredith of the M.P.A. The latter swore that the association had never received the $2,000 said to have been added to the School of Science job by the McGuire and Purdy-Mansell Companies. As the Government has not paid this account in full the association's $2,000, to be given in lieu of a percentage, may be deducted from the amount due the contractors. Mr. Meredith stated that the association's receipts had been $35,000, of which $7,500 had gone towards running expenses, $20,000 had been paid in dividends to members and the remaining $7,500 was in the custody of President Armstrong. The court adjourned until Monday, December 4, when it is expected to sit continuously until the cases are disposed of.

* * *

On Tuesday the police court trials were resumed, members of the Plumbers' Union being put in the witness box to show that the journeymen were working in agreement with the bosses. Crown Rttorney Curry made a close examination of the union's minute books and asked numerous questions of the witnesses regarding the withdrawing of union men from shops, the owners of which were non-members of the masters' association. He even tried to point out that the union men restrained trade by agreeing not to buy tobacco without the union label upon it, but Magistrate Denison ruled this point out. The cases continued on Wednesday and until Thursday noon. J. B. Reeves, the complainant, was in the box on Wednesday and gave some damaging evidence regarding the "I.O.U.'s" given by members of the association to him and by him to others before he withdrew from that body. According to him, and to Joseph Harrison, another ex-member who gave evidence, very few of the promises to pay were redeemed. Mr. Reeves made a distinctly grand stand play when he endeavored to show that he could not give evidence because of the oath he had taken as a member of the M.P.A.

* * *

Mr. B. J. Morris, secretary of the Central Supply Association, was recalled, and said there was a list of preferred buyers, dated March 8, 1904, to whom supply houses could sell at open prices. On that list were Bennett & Wright, Keith & Fitzsimons, Purdy, Mansell & Co., John Ritchie Co., W. J. McGuire & Co., W. Mashinter, and Fiddes & Hogarth. All the members of the old Plumbers' Supply Association became members of the Central Supply Association as a section. The new association had only one branch, with many interested, there being twenty-one members of the new association.

* * *

Other evidence was taken to verify agreements entered into between the various branches of the trade. At the close of the case the magistrate overruled several legal points made by Lawyer O'Donoghue, and committed the accused for trial. Messrs. Wm. Bush, W. J. Storey, W. J. Mason, C. J. Connor, F. Lawlor, L. Legrow, R. W. Harrison, C. H. Beavis, K. J. Allison, P. Hayes and Fred Armstrong were, therefore, bound over on $200 personal bail, and will appear at the assizes in January for trial. The case against W. J. Carrick, H. T. Bush and Alex. McMichael, supply men, and Messrs. Allison, Armstrong and Beavis, master plumbers, was adjourned for hearing in the police court on Friday, Dec. 8.

* * *

There is little to report regarding the other branches of trade charged with being controlled by "combines." During the week the grocers have become entangled in various charges made before the Tariff Commission, and by Crown officers at Hamilton. Various representatives of the hardware houses have made statements repudiating the charges made that certain branches of their business are governed by combines. The Radiator Association are said to have removed their books from the secretary's offices, and it is said that it will go much harder with their witnesses in court in consequence.

* * *

The drag net set out to draw practically every master plumber and supply man in Toronto into court may develop additional features of interest to the trade, but our report of Friday's trial must necessarily wait until next week's issue. It is deplorable, however, that the entire trade, fully 75 per cent. of whom have not been participants in the "I.O.U." or other systems taken exception to are to be given police court notoriety. If the action results, however, in clearing them before the public and centering the prosecution upon those who profited most by the procedures now said to have been illegal, the wholesale charges will have been productive of some good. It must be remembered, also, that so far the prosecution has only been heard. Later on the defence will have its inning, and there may be a different story to tell.

TORONTO PLUMBERS DEFENDED.

ALBERT WELCH, stove merchant and plumber, 302 Queen street west, Toronto, has taken up the defence of the master plumbers in the daily papers and in an interview with the Star brought out some strong points. Mr. Welch said that because a few members of the association had stepped beyond the bounds in the giving and taking of I.O.U.'s all those engaged in the trade should not be put under suspicion of having done the same things.

"I never gave nor took a rake-off of any kind, and there are plenty of others who would not countenance anything of the kind," said he.

Only What They Put In.

"Then we have been accused of making money out of the association. Though we did receive $100 apiece out of the funds at the end of the year, that was only getting back some of what we had put in for the running expenses of the association. While much has been said of how much we took out, little has been said of the sums we put in. If it were looked up, I think you will find that in most cases we put in a lot more than we got out of it.

"I joined the association, as did many others, so as to get supplies, and have not attended a meeting in a year and a half. The association was formed primarily with the object of meeting unfair competition from journeymen plumbers, who would take contracts to do jobs at 30 or 40 cents an hour, and charge nothing in the way of profit on the work. They had no capital to buy the necessary supplies, and would ask the owner to advance the money for them, just as is done to-day by some journeymen carpenters. It was impossible to meet such competition as this, and the result was that most of the smaller plumbers were in a bad way financially. There was scarcely a supply house in the city that would trust one of the smaller firms with $100 worth of goods. I went out of the business for a while myself.

Not Getting Rich Now.

"During the past two or three years things have been somewhat better, but even at that the majority of the plumbers have not been making money. I would not stay with it to-day if I could get out of it without injury to the rest of my business. I will give anyone the liberty to use my name, men and tools if they will pay me 5 per cent. on the business done. I am ready to show my books to anyone, and they will prove that there is not much profit in the plumbing business. I do not make more than 10 per cent. annually, if I make that, and it is hardly worth the worry.

"Talking about profits," he continued, "why, I make over twice as much per cent. on stoves, and on some lines of hardware four and five times as much. People do not kick, however, and express their wonder that such things can be made so cheaply. Plumbing is not the bonanza that some people think it is.

"Some people will call you up, and ask you to send a man up to fix something that is wrong. You ask what it is, and they don't know. You have to send up a man to see, and he then has to come back for what he wants, which may be one of a hundred different articles. Then, when you send the bill in for the full time taken in the work, the people will kick and want to know why the plumber didn't take what was wanted with him the first time he went. Plumbing is not all bread and honey by any means."

NATURAL GAS EXPLOSION IN CHURCH.

SHORTLY before noon last Saturday the Baptist church at Bunyan, eight miles from Sarnia, was wrecked by an explosion of natural gas, and Geo. Leggott, a farmer, had a remarkable escape from death. Natural gas from the oil wells on the Egan farm nearby had recently been piped into the church and connected for heating purposes, and Mr. Leggott and William Rowe had gone into the building to test the new arrangements in order to have things in shape for morning service. A noticeable odor of escaping gas led Leggett to go under the flooring to find the leak, and the lighting of a match caused the explosion. Both ends of the building were blown out, the front door being hurled 100 feet, and the furniture completely wrecked. The sidewalls and roofs remain intact. Rowe was covered with the wreckage, but escaped unhurt. Leggott's clothing took fire, his hair, eyebrows, and beard were burned off, and his hands and face badly burned, but the doctors are satisfied that he will recover.

ICE FOR HEATING.

THE use of ice for heating purposes is one of the oddities of our modern civilization. Often it happens that a train carrying fruit from the south to the northern market encounters a cold spell while en route. If the temperature goes below a certain point the perishable merchandise will be ruined. But it has been ascertained that such a misfortune may be prevented by covering the fruit car with a coat of ice—a thing easily accomplished by turning a hose upon it and allowing the water to freeze until the whole vehicle is enveloped in a glassy and glittering blanket.

It may, indeed, be appropriately called a blanket, inasmuch as it prevents the radiation of heat from the interior of the car. The ice being a good nonconductor, the warmth is retained and the fruit, or possibly it may be vegetables, goes on its way unspoiled even by zero weather.

Cars used for transporting oranges and other fruit from California to the east are often provided nowadays with large cylindrical "ice stoves," as they might be called, at each end, which, while useful in Summer time for refrigeration, are filled with ice during a cold spell in Winter. When the temperature outside is at zero or below, the ice, at thirty-two degrees Fahrenheit, is relatively warm, and thus the "stoves" described act as heaters.

NOVEL HEATING SYSTEM.

THE city of St. Thomas has just installed a system of heating for the public library and the city hall by utilizing the exhaust steam from the street railway engines and the electric light engines at the power house, which is now a waste product. The system is as follows: The exhaust steam is carried through a heater which is filled with small, corrugated copper tubes. these tubes being filled with water. In passing through this heater the water is heated to a temperature the same as the steam. Then, by means of a force pump, it is forced through a main pipe, 4 inches in diameter, to the buildings, where it is attached to the mains and the radiators in the buildings. There is also a return pipe which carries the water back after passing through the radiators, when it is again heated to any desired extent, the heating being regulated either by the speed of the pump or by control valves placed on the mains as they enter each building. The 4-inch mains and the return pipe which carry heat to the buildings are laid underground. They are covered with asbestos wool to prevent the heat escaping, and then wrapped with hemp packing and inclosed in a 12-inch vitrified tile with cement joints. The saving of this system will be practically the whole cost of heating the buildings with coal. There will also be the saving of the labor attending the firing of the furnaces.

MORE HEAT FROM A RADIATOR.

IN many rooms the radiator is either too small or the steam pressure is too low to maintain a comfortable temperature in severe weather. If the tenant is enjoying the many advantages afforded by central station electric lighting service, the matter can easily be remedied. Take the fan that kept you cool all summer and set it where it can blow against a large part of the radiator's surface. Turn it on at low speed, or at high if necessary, and your cold room will soon be thoroughly warmed. The philosophy of the thing is that steam at a low pressure carries much less latent heat than steam at a high pressure, and therefore warms the radiator so poorly that only a slight draft of air arises around the pipes, and condensation is slow. With the fan in operation there is a forced draft against the radiator that conducts a great deal more heat away from the iron, cooling it so that much more condensation of steam occurs inside it. The heat thus snatched from the reluctant radiator is held in the circulating atmosphere of the room, which is soon changed from cold to warm at a trifling cost for electric energy.

WELDING ALUMINUM.

ALUMINUM is a metal which is more and more extensively used each year. One of the great obstacles to its employment in many cases has been the difficulty of joining two pieces together. This trouble has been overcome by the utilization of a property of the metal, which property is remarkable in the degree of its development in aluminum, for it is in a minor degree recognizable in other metals. If aluminum is heated by a blowpipe it becomes coated with a thin film of oxide, and this forms or aids in forming a sort of bag of some strength. It is possible to melt a rod of aluminum, and to puncture the bag and let the melted metal escape, leaving a hollow shell behind it. The new process of joining two bars consists in heating the ends until they attain this state. They are then by a lever brought suddenly together, and simultaneously a screen is dropped in front of the blast lamp and a douche of cold water is caused to impinge upon the heated part. The result is an almost perfect weld. The theory of the action is this: The melted metal is held intact by the films of oxide which surround it. When the ends are pressed together the film is broken, and the metal of the bars flows together. At the very instant that this occurs the cold water is applied, and before the melted metal can run away it is solidified and the bars are joined. It is hoped, by using a mandrel, which is a cylindrical bar of iron fitting the interior of a pipe, that pipes of aluminum can be joined by this process.—Collier's Weekly.

THE UTILITY OF SYSTEM.

JUST the difference in the way the two men use their heads makes the difference in the way they conduct their business. Misdirected, systemless work will make any business management ineffective, while careful planning, simple, effective system, will aid even moderate ability to accomplish vast results.

* * *

How few business men make a study of the economy of time and energy of employes! They handle their goods over and over again. People are working at cross purposes everywhere, duplicating work, confusing orders. A little planning, a little more shrewd headwork, would save many a house from dry rot and paralysis.

* * *

These systemless men never stop long enough to think deeply into their business to plan comprehensively. They hurry to their offices, open their mail with a rush, look around the establishment a little, without ever acquiring that penetrating eye and sharp observation which characterizes the great merchant who uses his head. They do not penetrate beneath the surface of things, and get down to the core of principle.

* * *

In most of the smaller concerns which have never been able to rise above mediocrity, you will find high priced employes opening mail, sorting letters, sending out circulars, doing work which could just as well be done by low-salaried help. You will find people working at a disadvantage all around the establishment, doing the wrong thing, the uneconomical, unbusinesslike thing, just for the lack of a little thought projected into the system. Everywhere people are using their hands and their feet instead of their heads, trying to substitute muscle for brain.

* * *

All this hurry and flurry, rush and drive about nothing. It is the calm, cool, calculating head that gets things done. A level-headed, keen business man would go through such an establishment in his own line, and in a single day make comments, suggest changes, and give ideas which would revolutionize the whole business, and lift this mediocre concern into excellence.

* * *

Yet the proprietors of these small houses go through life complaining of their hard luck and the fates which kept them down. They lay their nonsuccess to a bad location or change of business, or too many competitors, when competent men all about them know that it is the lack of the proper use of their heads.

PLUMBING MARKETS

QUEBEC.

Office of HARDWARE AND METAL,
232 McGill street,
Montreal, December 1, 1905.

ALTHOUGH navigation has closed and rougher weather set in, the local supply houses report they have not as yet noticed any falling off in orders, thus showing that the contracts under way are even more numerous and extensive than was supposed. The plumbing trade has enjoyed a wonderfully prosperous season in this province and indications are that the coming month will see very little abatement in the volume of business done.

There is one important change in price to note this week, namely that in solder, which has advanced one cent. Bar solder half-and-half guaranteed, is now quoted at 22c., while No. 2 (wiping solder) is now 18c. Another change which is likely to occur at any moment is in lead pipe. Owing to the fact that pig lead has once more advanced very sharply, it is expected that all lead products will have to follow the lead.

The shortage in iron pipe has somewhat abated since our last report, though it is still acute and iron pipe fittings remain in about the position previously noted.

Range Boilers—There has been no change in price, and the condition of the trade is just about the same as before. Our quotations are as follows: Iron clad, 30 gallon, $6.00, and 40 gallon, $7.50 net; copper, 30 gallon, $22.00; 35 gallon, $24.00; 40 gallon, $28. The discount on copper boilers is 15 per cent.

Lead Pipe—The expectation is that prices will soon be withdrawn once more and higher figures substituted, owing to another sharp advance in the primary markets. In the meantime, however, we quote: as follows: Discounts twenty-five per cent f.o.b. Montreal, Toronto, St. John, N.B., and Halifax; f.o.b. London, 15c. per hundred lbs. extra; f.o.b. Hamilton, 10c. per hundred lbs. extra.

Iron Pipe Fittings—There is still a great scarcity in this line and no improvement in the situation can be expected for some time. Our prices are: Discounts on all sizes of nipples up to 6-inch, 67 1-2 to 70 per cent.

Iron Pipe—The shortage which has existed for some time has at last abated somewhat, some of the local houses reporting themselves fairly well equipped now to meet orders. Our prices still remain as follows: Standard pipe in lots of 100 feet, regular lengths, 1-4 inch, $5.50 3-8 inch, $5.50; 1-2 inch, $8.50; 3-4 inch, $11.50; 1 inch, $16.50; 1 1-4 inches, $22.50; 1 1-2 inches, $27.00; 2 inches, $36.00; discounts on black pipe, 1-4 inch, 62 per cent.; 3-8 inch, 62 per cent.: 1-2 inch, 71 1-2 per cent.; 3-4 inch, and upwards, 73 1-2 per cent. Discounts on galvanized pipe: 1-4 inch, 47 per cent.; 3-8 inch, 47 per cent.; 1-2 inch, 61 1-2 per cent.; 3-4 inch and upwards, 63 1-2 per cent. Extra heavy pipe of 100 feet lots are quoted as follows: 1-2 inch, $12.00; 3-4 inch, $15,000; 1 inch, $22.00; 1 1-4 inches, $30.00; 1 1-2 inches, $36.00; 2 inches, $50.00. The discount for black pipe is: 71 per cent., and for galvanized 61 per cent.

Soil Pipe and Fittings—Business is decidedly brisk and prices are held firm. Our quotations are as follows: Standard soil pipe, 50 per cent. off list. Standard fittings, 50 and 10 per cent. off list; medium and extra heavy soil pipe, 60 per cent. off. Fittings, 60 per cent off.

Solder—The strength in the tin and lead markets has at last resulted in another advance in solder and we are now quoting prices one cent. higher than last week. Present quotations are: Bar solder, half-and-half, guaranteed, 22c.; No. 2 (wiping solder), 18c.

ONTARIO.

Office of HARDWARE AND METAL,
10 Front Street East,
Toronto, December 1, 1905.

SOLDER has advanced owing to the heavy advances of lead and tin, prices having stiffened fully one cent during the week. Lead pipe is still quoted at last week's figures, but another rise is looked for at any time. Pig lead is now quoted at $4.50 in ton lots and $4.75 in less than that amount, an advance of 25 cents. Pipe, therefore, is certain to move upward unless metal market conditions take an unexpected turn.

The supply houses are still loaded up with orders, the continued open weather keeping the plumbers busy. Many lines of material are getting very scarce owing to the heavy call and shipments are behind on closet bowls, woodenware and enameled goods. While there has been a slight falling off, trade is in a most satisfactory state for this season of the year.

Lead Pipe—Recent advances in pig lead make another advance almost certain. Our quotations are as follows: Lead, 7c.; lead waste pipe, 8c.; discount, 25 per cent.

Soil Pipe and Fittings—Buying is very active with prices very firm. Our quotations are as follows: Medium and extra heavy pipe and fittings, 60 per cent.; 7 and 8 inch pipe, 40 and 5 per cent.

Iron Pipe—Quotations are steadier and the figures below are held to by most dealers. They are below what the manufacturers will sell for at this time, however. We quote: Black, 1-4 inch, $2.09; 3-8 inch, $2.09; 1-2 inch, $2.39; 3-4 inch, $2.98; 1 inch, $4.27; 1 1-4 inch, $5.84; 1 1-2 inch, $7.01; 2 inch, $9.35; 2 1-2 inch, $15.00; 3 inch, $19.35; galvanized, 1-4 inch, $2.91; 3-8 inch, $2.91; 1-2 inch, $3.22; 3-4 inch, $4.13; 1 inch, $5.93; 1 1-4 inch, $8.09; 1 1-2 inch $9.71; 2 inch, $12.95; 2 1-2 inch, $21.45; 3 inch, $28.05.

Iron Pipe Fittings—Trade is quite active owing to the heavy demand for heating supplies. We quote: Cast iron, elbows, tees, crosses, etc., 65 per cent.; cast iron plugs and bushings, 65 per cent.; flange unions, 65 per cent.: nipples, 75 per cent.: iron cocks, 60 per cent.: Canadian malleable, 35 per cent.: American malleable, 25 per cent.: malleable unions, 65 per cent.; malleable bushings and plugs, 60 per cent.: C. I. ceiling plates, plain or N. P., 70 per cent.: C. I. floor, 80 per cent.: hookplates, 60 per cent.; expansion plates, 65 per cent.; headers or branch tees, 65 per cent.; ring hangers, black or galvanized, 60 per cent., American list.

Galvanized Iron Range Boilers—Demand for boilers is very brisk as many contracts are being completed. We quote: 12 gallon capacity, standard, $4.50; extra heavy, $6.50; 18 gallon, standard, $4.75; extra heavy, 6.75; 24 gallons, standard, $4.75; extra heavy, $6.75; 30 gallon, standard, $5; extra heavy, $7.50; 35 gallon, standard, $6; extra heavy, $9.50; 52 gallon, $11; extra heavy, $14; 66 gallon, standard, $18; extra heavy, $20; 82 gallon, standard, $21; extra heavy, $24; 100 gallon, standard, $29; extra heavy, $34; 120 gallon, standard, $34; extra heavy, $40; 144 gallon, standard, $47; extra heavy, $55. The discount on copper and range boilers continues at 15 per cent.

Solder—Another advance has been made and the majority of dealers are now quoting: Bar solder, half-and-half, guaranteed, 21 1-2c., and wiping at 20c.

Enameled Ware—Stocks are scarce and orders heavy. Last week's report had the advances on baths given as $15. This was a typographical error and should have been 15 cents. Our new quotations are as follows: Baths, rolled rim, 5 feet, 2 1-2 inch rim, first quality, $18.65; special, $16.65; 3 inch rim, first quality, $19.15; special, $18.15; 5 1-2 feet, 2 1-2 inch rim, first quality, $20.15; special, $18.15; 3 inch rim, first quality, $21.65; special, $19.65. Lavatories, discounts, first quality, 30 to 30 and 5 per cent.; special, 30 and 10 to 40 per cent. Sinks, 18 x 30 inch, flat rim, first quality, $2.55; special, $2.40.

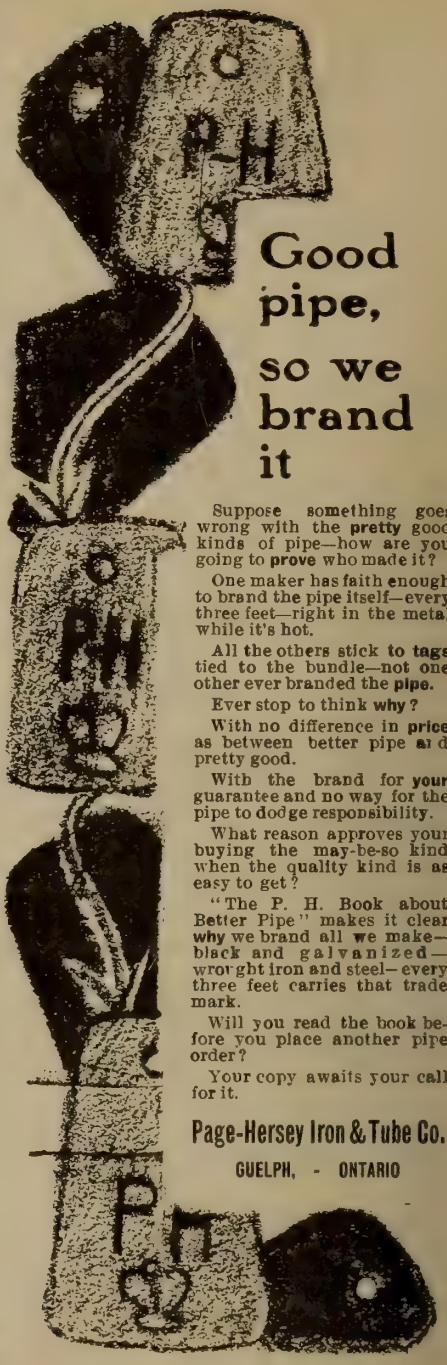
ENGLISH PLUMBERS QUARREL.

CANADIAN plumbers are having troubles of their own, but that they are not the only oysters in the soup is shown by the fact that the trade in England is in the midst of a warm controversy. The Master Plumbers' Association, organized in 1895, has now 1,470 members, being well representative of the trade. The Worshipful Company of Plumbers, however, seeks control of the trade and is backed by the Society of Operative Plumbers, the strength of which body is not stated.

In order to throw light on the present dispute, it is necessary to review the past connection of the two factions with the plumbing trade of the country. The Worshipful Company of Plumbers was founded in the fourteenth century, and from what is known of the conditions of town life in those days it may be doubted if the sanitary side of the plumber's craft received much attention then; certainly, from the times when plumbing became a modern calling until about ten years ago the company never claimed connection with the trade. But about the year 1895 those managing the affairs of the company took steps to connect the ancient foundation once more with the craft that had given it its name, and a scheme was started under which plumbers, upon passing certain examinations and paying certain fees, could obtain from the company a certificate of registration, and the right to add the letters R.P. to their names. The scheme is not compulsory, but the company has promoted some six or seven bills in Parliament with the object of securing for itself a very considerable measure of control over the plumbing craft. All these bills have suffered shipwreck, and in the course of their promotion the company has encountered the opposition of the leading authorities on technical education in the metropolis. Discouraged by its Parliamentary ill-success, the company has lately tried to achieve some of its objects by the aid of a Water Regulations Committee composed of representatives of water companies, architects and others, with a view to procuring a set of rules applicable to the supply of water. The clerk of the plumbers' company also acted as clerk of this committee, whose report is now under consideration by the Local Government Board, which must sanction the proposals before they can be put into force.



A LETTER FROM OTTAWA.

Editor Hardware and Metal: In all protective countries is it not admitted that the consumer is as well protected as the producer, society being so interwoven that where the methods employed by the one were revealed it was only to show corresponding methods of the other? In Canada the Government protects itself with marvelous success. Has it not facilitated the development of all things? Have not the employer and employe under the magic of combination learned of its virtues? Has not the consumer learned that his powers of consumption are greater under combination? If not he is too blind to see and too deaf to hear.

Let those critics of trade associations ask themselves how much this favored country protects them.

Yours truly,
PLUMBER.

Ottawa, November 27, 1905.

Good pipe, so we brand it

Suppose something goes wrong with the **pretty** good kinds of pipe—how are you going to **prove** who made it?

One maker has faith enough to brand the pipe itself—every three feet—right in the metal while it's hot.

All the others stick to tags tied to the bundle—not one other ever branded the pipe.

Ever stop to think **why**?

With no difference in price as between better pipe and pretty good.

With the brand for your guarantee and no way for the pipe to dodge responsibility.

What reason approves your buying the may-be-so kind when the quality kind is as easy to get?

"The P. H. Book about Better Pipe" makes it clear **why** we brand all we make—black and galvanized—wrought iron and steel—every three feet carries that trade mark.

Will you read the book before you place another pipe order?

Your copy awaits your call for it.

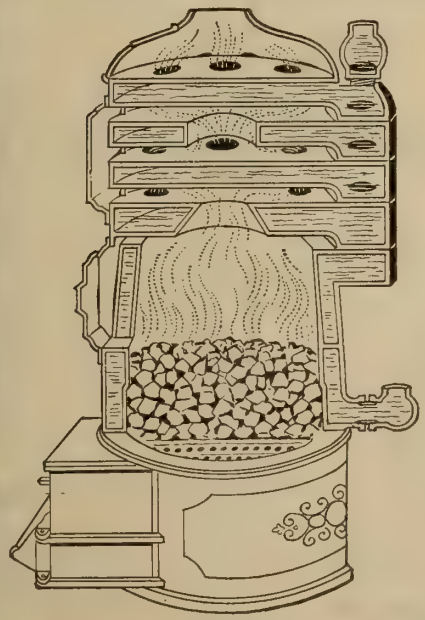
TIME AND PROFITS



Time wasted in firing up any heating system after the job is finished means profits lost An hour now—a day later—a few hours again don't look much—but count up what all this extra not-paid-for time amounts to you in dollars and cents.

Doesn't it surprise you?

Your margin of profit is profit when you instal the

OXFORD HEATING SYSTEM

because it "stays put," as the boys say. When you're finished with the job you are finished.

Our Oxford ("B" Series) Boiler is the most powerful, as well as economical heating apparatus on the market. As a practical man you will notice its immense superiority by a glance at the cut. The principal feature of the Boiler is the improved build of the Fire-pot, which is wider at the bottom than the top. The heat cannot pass by the overhanging upper walls—as it does with vertical walls—and must add greatly to the effective heating power of these surfaces besides assuring fuel economy.

A joint that cannot leak. The old method of making joints by squeezing in layers of rubber added greatly to boiler defects. Our Oxford Steel Push Nipples make a permanent metal-to-metal joint and we use them in making all connections.

A combination hard to equal. Oxford Steam and Hot Water Radiators used with Oxford Boilers assure a perfect distribution of heat, beauty, economy and a comfortable home.

Let us mail you the Gurney Oxford Book of Steam and Hot Water Heating Apparatus.

WE also manufacture Cast Iron and Steel Plate Ranges, Gas Stoves, Ranges and Heaters, Hotel Ranges, Warm Air Furnaces and all kinds of Cooking and Heating Apparatus, Plumbers' Supplies.

MUELLER WATER STRAINERS

PATENTED

C-109

It is an easy matter to make a customer feel at first that he has a good job of plumbing, but he isn't apt to remain in that frame of mind if his fixtures become clogged with sediment.

A Mueller Strainer connected in the service pipe will arrest the passage of such matter so that the fixtures can in no way be affected by it. It will make a customer continuously feel that his job is a good one.

The Mueller Strainer is made of cast iron, has a brass gauze screen and brass plug and is made for all sizes of pipe up to 3-inch.

Each Strainer bears the Mueller trade mark and is *unconditionally guaranteed.*

Our PATENT WIRE BALE
can be used with the

METALLIC ASH-SIFTER

and the weight of the sifter be thus transferred from the operator to the fence or post. Our **Metal Cover** fits accurately on the sifter and prevents the dust from rising. A nice business can be done with the **Metallic Ash-Sifter, Patent Wire Bale,** and **Metal Cover.** DO YOU KEEP THEM?

C. M. CUTTS & CO., Toronto Junction, Ont., Sole Makers

Finest Fuel Saving Furnaces in Canada
Save your coal and wood. Building stoves is a science we have mastered. All our lines are money makers.
Send direct or ask your nearest jobber.

OTTAWA FURNACE AND FOUNDRY CO. Limited
OTTAWA, ONTARIO

A WORD TO PLUMBERS

Our Pipe Die reduces the labor in threading pipes at least one half. Try it, it will cost you nothing to try it. We secure you against possible loss by our offer to return your money on return of the die within thirty days, if it is not satisfactory. It is surely worth a trial on these conditions.

A. B. JARDINE & CO.
HESPELER - - - ONTARIO

Kerr's "Copper-Alloy" Disc
GLOBE VALVES

are superior to any other disc valves on the market for high steam.
This is a very superior valve, at a moderate price.

The KERR ENGINE CO., Limited
Manufacturers
WALKERVILLE - ONTARIO

"BLACK DIAMOND"

TARRED FELTS
BUILDING PAPER

WRAPPING PAPER
SHEATHING

READY ROOFING

These five lines ought to be pretty well known by this time, for we have been manufacturing them for years. The durability, strength, fine appearance, etc., of our goods are not things that Hardwaremen can forget hurriedly.

"Cyclone" and "Joliette" brands of **Sheathing** enjoy a large trade. If you are not selling them you are missing business.

82 McGILL STREET

ALEX. McARTHUR & CO., Limited, MONTREAL

F. J. C. COX, Winnipeg, Sole Agent for Northwest Provinces.

CURRENT MARKET QUOTATIONS.

Dec. 1 1905.

These prices are for such qualities and quantities as are usually ordered by retail dealers on the usual terms of credit, the lowest figures being for larger quantities and prompt pay. Large cash buyers can frequently make purchases at better prices. The Editor is anxious to be informed at once of any apparent errors in this list, as the desire s to make it perfectly accurate.

Canadian make discount 40 per cent.

Frequent attempts have been made to imitate

Storm King Track

without success, and it stands to-day in a class by itself—***The most perfect Barn Door Track*** made in Canada.

Every piece stamped "Genuine Storm King" with our name.
Insist on getting ***Storm King Brand.*** You will find it pays.

ASK YOUR JOBBER

MADE BY
SAFETY DOOR HANGER CO., - Hamilton, Canada

WALKER CORK SCREWS

are good holiday souvenirs and live sellers the whole year. Are made well and are made out of good material. That is why we guarantee every one that we put out. When ordering Cork Screws try **Walkers.**

Manufactured only by **ERIE SPECIALTY COMPANY,** ERIE, Pa., U.S.A.

Books for Plumbers, Steam Fitters, Etc.

Furnace Heating

By W. C. Snow.

The author has prepared a book of reference for the furnace man or the architect. There are tables which have been tested by years of practical use. They are of great value to the practical furnace man.

170 pages, 6 x 9 in.; 90 illustrations; cloth bound.

Price, post paid, - - $1

(This book has had a heavy sale in Canada.)

* * *

Kitchen Boiler Connections.

A selection of practical letters and articles relating to water backs and range boilers.

The work is divided into two parts, the first on water backs and boilers and their connections, and the second on heating rooms from range boilers, a topic that has much practical interest to the plumber. There are few lines of work where so many little difficulties arise, and therefore the discussion of different questions which have arisen should be of great interest as well as practical value to workers in this line.

Fifth enlarged edition; 194 pages; 6 x 9¼ inches; 113 illustrations.

Cloth, post paid, - - $1

* * *

Formulas and Tables for Heating.

Being German formulas and tables for heating and ventilating work, for those who plan or erect heating apparatus. By J. H. Kinealy, M.E.; 56 pages; 4½ x 7 inches; leather.

Price, post paid, - -

* * *

American Sanitary Plumbing

By J. J. Lawler.

For plumbers, steam fitters, architects, builders, apprentices, etc. Containing practical information of all the principles involved in the mechanics and science of modern plumbing, illustrating with original sketches the fundamental principles of everything the plumber should know. Everything explained in the most simple language, so that it will be impossible to misunderstand anything.

Large 12mo, cloth, post paid, - $2

Steam and Hot Water Fitters' Text Book.

A book prepared for the Steam and Hot Water Heating Course at the New York Trade School, with supplementary chapters on house heating, specifications and surface estimating; by Thos. E. McNeill.

This book will be appreciated by those who wish to master the principles of steam and hot water heating. The definitions in the beginning deal with the appliances, and little by little the reader is led on until at the close he is informed how to figure surfaces, lay out plans and install heating apparatus with the necessary piping.

140 pages; numerous illustrations and diagrams; 5 x 7 inches.

Cloth, post paid. - - $1

* * *

Plumbing and House Draining Problems

A selection of articles for practical plumbers.

This volume provides reliable and practical information for ready reference and assistance to plumbers who are confronted by problems with which they have had no previous experience. One-half of the edition is devoted to new problems and special articles. This book will prove a valuable reference in any plumber's library.

297 pages; 6 x 9 inches; 146 illustrations.

Cloth, post paid, - -

* * *

Practical Gas Fittings.

Describing how to run mains, lay pipes and put up gas fixtures. 116 pages; 54 illustrations; 5¾ x 8 inches.

Cloth, post paid, - - $1

* * *

Practical Hints on Joint Wiping.

A book containing articles on practical joint wiping for beginners in plumbing, with an appendix giving a selection of practical letters and articles.

66 pages; 5½ x 8; 41 illustrations.

Paper, post paid, - - 25c.

RICE LEWIS & SON

LIMITED

TORONTO.

A COMMON SENSE TALK.

AIR IS CHEAP. You do not pay rates for air like you do for water, yet a big fuss is made over the impurity of water and very often no thought is taken of the impurity of the air breathed from day to day and night to night.

Crowded rooms, whether in public places, schools, opera houses or factories, require ventilation as well as the private dwellings.

HOUSE BUILDING IS A SCIENCE NOWADAYS AND NO BUILDING IS COMPLETE WITHOUT ONE OF OUR AEOLIAN VENTILATORS.

THE VENTILATOR ITSELF IS AN ORNAMENT and can be made to suit the character of the building either as to size or as to quality of material.

Ottawa, May 30th, 1901.

Ottawa University,

Messrs. J. W. HARRIS CO., LIMITED, Montreal.

Dear Sirs:—Your "Aeolian" Ventilators placed on our University since three years have given us entire satisfaction. BROTHER NORMAND.

Dealers everywhere will find a double profit in handling this ventilator. Write direct for catalogue and booklet to-day.

Learn about our system of ventilating. A pleasure to send books.
